Industry price indexes

July 1985

Indices des prix de l'industrie

Juillet 1985

Data in Many Forms ...

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer print-outs, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

How to Obtain More Information

Inquiries about this publication and related statistics or services should be directed to:

Goods and Services Producing Industries Section,
Prices Division

Statistics Canada, Ottawa, K1A 0T6 (Telephone: 990-9606/07) or to the Statistics Canada reference centre in:

St. John's	(772-4073)	Sturgeon Falls	(753-4888)
Halifax	(426-5331)	Winnipeg	(949-4020)
Montréal	(283-5725)	Regina	(359-5405)
Ottawa	(990-8116)	Edmonton	(420-3027)
Toronto	(973-6586)	Vancouver	(666-3691)
Credit Card only (973-8018)			

Toll-free access is provided in all provinces and territories, **for users who reside outside the local dialing area** of any of the regional reference centres.

Newfoundland and Labrador	Zenith 0-7037
Nova Scotia, New Brunswick and Prince Edward Island	1-800-565-7192
Quebec	1-800-361-2831
Ontario	1-800-268-1151
Manitoba	1-800-282-8006
Saskatchewan	1(112)800-667-3524
Alberta	1-800-222-6400
British Columbia (South and Central)	112-800-663-1551
Yukon and Northern B.C. (area served by Northwest Inc.)	Zenith 0-8913
Northwest Territories (area served by Northwest Inc.)	Zenith 2-2015

How to Order Publications

This and other Statistics Canada publications may be purchased from local authorized agents and other community bookstores, through the local Statistics Canada offices, or by mail order to Publication Sales and Services, Statistics Canada, Ottawa, K1A 0T6.
1(613)990-8114
1(613)990-8115

Des données sous plusieurs formes ...

Statistique Canada diffuse les données sous formes diverses. Outre les publications, des totalisations habituelles et spéciales sont offertes sur imprimés d'ordinateur, sur microfiches et microfilms et sur bandes magnétiques. Des cartes et d'autres documents de référence géographiques sont disponibles pour certaines sortes de données. L'accès direct à des données agrégées est possible par le truchement de CANSIM, la base de données ordiolinguage et le système d'extraction de Statistique Canada.

Comment obtenir d'autres renseignements

Toutes demandes de renseignements au sujet de cette publication ou de statistiques et services connexes doivent être adressées à:

Section des industries de biens et de services,
Division des prix,

Statistique Canada, Ottawa, K1A 0T6 (téléphone: 990-9606/07) ou au centre de consultation de Statistique Canada à:

St. John's	(772-4073)	Sturgeon Falls	(753-4888)
Halifax	(426-5331)	Winnipeg	(949-4020)
Montréal	(283-5725)	Regina	(359-5405)
Ottawa	(990-8116)	Edmonton	(420-3027)
Toronto	(973-6586)	Vancouver	(666-3691)
Carte de crédit seulement (973-8018)			

Un service d'appel interurbain sans frais est offert, dans toutes les provinces et dans les territoires, aux **utilisateurs qui habitent à l'extérieur des zones de communication locale** des centres régionaux de consultation.

Terre-Neuve et Labrador	Zenith 0-7037
Nouvelle-Écosse, Nouveau-Brunswick et Île-du-Prince-Édouard	1-800-565-7192
Québec	1-800-361-2831
Ontario	1-800-268-1151
Manitoba	1-800-282-8006
Saskatchewan	1(112)800-667-3524
Alberta	1-800-222-6400
Colombie-Britannique (sud et centrale)	112-800-663-1551
Yukon et nord de la C.-B. (territoire desservi par la Northwest Inc.)	Zenith 0-8913
Territoires du Nord-Ouest (territoire desservi par la Northwest Inc.)	Zenith 2-2015

Comment commander les publications

On peut se procurer cette publication et les autres publications de Statistique Canada auprès des agents autorisés et des autres librairies locales, par l'entremise des bureaux locaux de Statistique Canada, ou en écrivant à la Section des ventes et de la distribution des publications, Statistique Canada, Ottawa, K1A 0T6.

Symbols

The following standard symbols are used in Statistics Canada publications.

- .. figures not available.
- ... figures not appropriate or not applicable.
- nil or zero.
- amount too small to be expressed.
- p preliminary figures.
- r revised figures.
- x confidential to meet secrecy requirements of the Statistics Act.

NOTE

CANSIM® (Canadian Socio-Economic Information Management System) is Statistics Canada's computerized data bank and its supporting software. Most of the data appearing in this publication, as well as many other data series are available from CANSIM via terminal, on computer printouts, or in machine readable form. Historical and more timely data which is not included in this publication are available from CANSIM.

Table 1 (i.e., Industry Selling Price Indexes by Major Groups, Industries and Selected Commodities) includes the identification codes required to order series from CANSIM. For example, to obtain the Industry Selling Price Index: Manufacturing, the code used is D 500000.

For further information write to CANSIM Division, Statistics Canada, Ottawa, K1A 0T6 or call (613) 990-8200.

®Registered Trade Mark of Statistics Canada.

Revisions

Unless otherwise stated, price indexes in this publication are subject to revision for the most recent six months shown. Any revisions beyond these limits are so indicated.

Signes conventionnels

Les signes conventionnels suivants sont employés uniformément dans les publications de Statistique Canada.

- .. nombres indisponibles.
- ... n'ayant pas lieu de figurer.
- néant ou zéro.
- nombres infimes.
- p nombres provisoires.
- r nombres rectifiés.
- x confidentiel en vertu des dispositions de la Loi sur la statistique relatives au secret.

NOTA

Le CANSIM® (Système canadien d'information socio-économique) est le système de Statistique Canada qui se compose d'une banque de données informatisée et de son logiciel de soutien. La plupart des données présentées dans cette publication et beaucoup d'autres données contenues dans le CANSIM peuvent être extraites par l'intermédiaire d'un terminal, sous forme d'imprimés d'ordinateur ou sous forme lisible par machine. Des données historiques et des données plus actuelles qui n'apparaissaient pas dans cette publication sont disponibles de CANSIM.

Le tableau 1 (Indice des prix de vente dans l'industrie par groupes, industries et par certains produits) contient les numéros d'identification qui servent à l'extraction des données de CANSIM. Par exemple, pour obtenir l'Indice de prix de vente dans l'industrie: industries manufacturières, le numéros d'identification est D 500000.

Pour plus de renseignements, écrivez à la Division CANSIM, Statistique Canada, Ottawa, K1A 0T6, ou téléphonez à (613) 990-8200.

®Marque déposée de Statistique Canada.

Révisions

Sauf avis contraire, les indices de prix contenus dans la présente publication sont susceptibles d'être révisés pour les six derniers mois indiqués. Toute révision portant sur une plus longue période est indiquée.

18. Petroleum and Coal Products Industries 54
19. Chemical and Chemical Products Industries 55
20. Miscellaneous Manufacturing Industries 59

1. Industries des aliments et boissons 2
2. Industrie du tabac 17
3. Industrie du caoutchouc et des produits en matière plastique 17
4. Industrie du cuir 20
5. Industrie textile 21
6. Bonneterie 23
7. Industrie de l'habillement 25
8. Industrie du bois 27
9. Industrie du meuble et des articles d'ameublement 31
10. Industrie du papier et activités annexes 32
11. Imprimerie, Édition et activités connexes 38
12. Première transformation des métaux 38
13. Fabrication de produits en métal (sauf machines et équipement de transport) 41
14. Fabrication de machines (sauf électriques) 43
15. Fabrication d'équipement de transport 45
16. Fabrication de produits électriques 47
17. Fabrication de produits minéraux non métalliques 51
18. Fabrication de produits de pétrole et du charbon 54
19. Industrie chimique 55
20. Industries manufacturières diverses 59

2. Purchase Price Indexes of Industrial Materials:

2. Indices des prix d'achat des matériaux industriels:

- Secondary Metals (1971 = 100) 62
- Steel Foundry Inputs (1971 = 100) 63
- Thermal Coal Index (1971 = 100) 63

- Métaux secondaires (1971 = 100) 62
- Entrées d'acier de fonderie (1971 = 100) 63
- Indice du charbon thermique 63

3. Electric Power Selling Price Indexes (Non-residential) (1971 = 100)

64

3. Indices des prix de vente de l'énergie électrique (non-résidentielle) (1971 = 100)

64

4. Raw Materials Price Index (1977 = 100)

66

4. Indice des prix des matières brutes (1977 = 100)

66

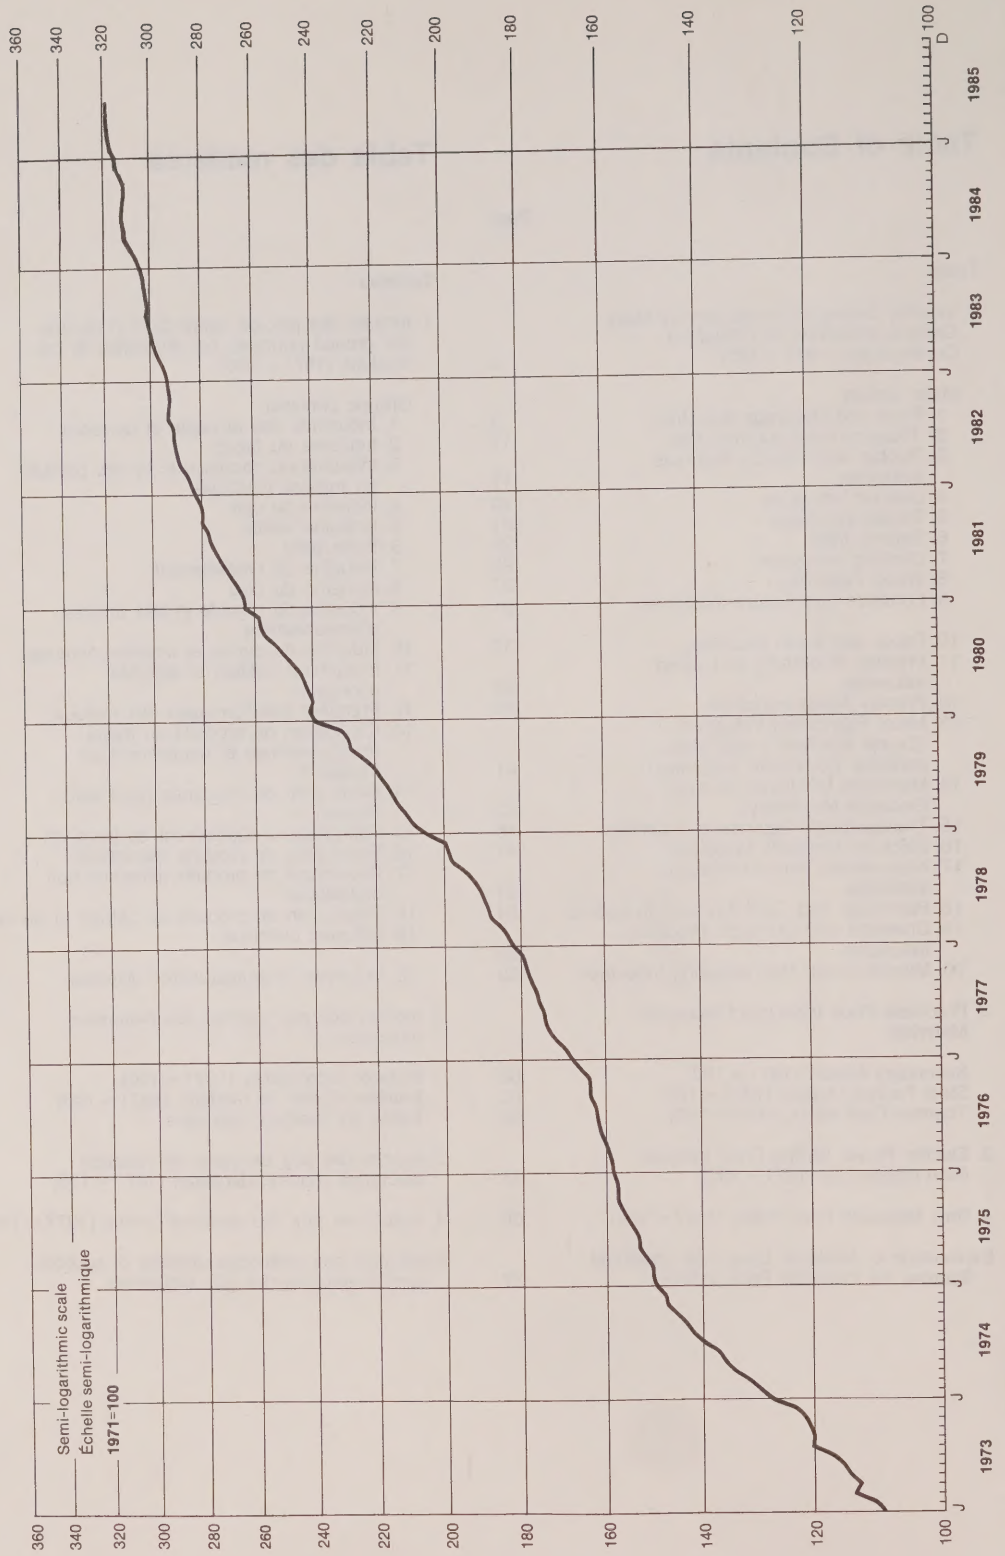

Explanation of Methods Used and Additional Sources for Industrial Price Indexes

5. Textile industries - Industrie textile	253.5	253.7	249.8	- 0.1	1.5	-	-	3.5
6. Knitting mills - Bonneterie	204.0	203.3	201.6	0.3	1.2	-	-	0.9
8. Wood industries - Industrie du bois	268.7	271.6	254.7	- 1.1	5.5	- 0.04	0.2	4.7
9. Furniture and fixture industries - Industrie du meuble et des articles d'ameublement	321.2	321.0	310.6	0.1	3.4	-	-	1.6
10. Paper and allied industries - Industrie du papier et activités annexes	344.9	346.9	351.9	- 0.6	- 2.0	- 0.05	- 0.2	8.2
12. Primary metal industries - Première transformation des métaux	321.9	322.1	326.5	- 0.1	- 1.4	-	- 0.1	8.4
13. Metal fabricating industries - Fabrication des produits en métal	306.3	305.9	297.2	0.1	3.1	-	0.2	7.5
14. Machinery industries - Fabrication de machines	280.7	280.8	271.7	-	3.3	-	0.1	4.4
16. Electrical products industries - Fabrication de produits électriques	239.2	239.0	232.5	0.1	2.9	-	0.2	6.8
17. Non-metallic mineral products industries - Fabrication de produits minéraux non métalliques	342.0	339.4	330.5	0.8	3.5	0.03	0.1	3.2
18. Petroleum and Coal Products(3) Fabrication de produits de pétrole et du charbon(3)	745.2	745.2	702.2	-	6.1	-	0.6	4.2
19. Chemical and chemical products in- dustries - Industrie chimique	335.4	334.0	329.3	0.4	1.9	0.03	0.1	6.6
Other major groups(4) - Autres groupes(4)	269.4	268.8	261.5	0.2	3.0	0.03	0.4	15.6
Special aggregations - Agrégations spéciales:								
Total food and beverage industries excluding alcoholic beverages - Ensemble des industries des aliments et boissons sauf les boissons alcooliques	328.0	325.1	325.3	0.9	0.8	0.17	0.2	18.2
Total non-food industries, including alcoholic beverages - Ensemble des industries non alimentaires incluant les boissons alcooliques	317.6	317.5	310.1	-	2.4	0.03	2.0	81.8
Basic industries, major groups 8, 10, 12, 17 - Industries de base, groupes 8, 10, 12, 17	322.0	322.9	321.7	- 0.3	0.1	- 0.07	-	24.5
Other non-food industries - Autres industries non alimentaires	315.8	315.2	305.2	0.2	3.5	0.11	1.9	57.3

(1) This shows the amount by which the movement of each index would move the total, in the absence of any change in the other indexes.

(1) Ce chiffre donne l'ampleur de la variation qu'occasionnerait dans l'indice d'ensemble un mouvement d'un indice donné si tous les autres indices demeuraient inchangés.

(2) These indexes are preliminary.

(2) Ces indices sont provisoires.

(3) Major group 18 is estimated for the current month.

(3) Les données pour le groupe 18 ont été estimées pour le mois courant.

(4) Included are the following major groups: 7 - Clothing industries, 15 - Transportation equipment industries, 20 - Miscellaneous manufacturing industries.

(4) Les groupes suivants sont inclus: 7 - Industrie de l'habillement, 15 - Fabrication d'équipement de transport, 20 - Industries manufacturières diverses.

- (1) Gross weighted, including inter-industry shipments. Explanation of methods follows Table 4. — Indice pondéré brut comprenant les livraisons inter-industrielles. L'explication des méthodes est donnée à la suite du tableau 4.
- (2) The Petroleum Refineries index (D544001 18-3651) is estimated for the current month. The movement of this index is reflected in Major Group 18 and also in the Industry Selling Price total for Manufacturing. — L'indice des raffineries de pétrole (D544001 18-3651) pour le mois courant a été estimé. Le mouvement de cet indice influe sur le groupe 18 de même que sur l'indice total des prix de vente dans l'industrie manufacturière.
- (3) Only British Columbia prices for both rough and planed hemlock are included. — Seuls les prix de Colombie-Britannique du pruche à l'état brut et plané sont inclus.

(1) Thermal Coal Index for the most recent twelve months is subject to revision. The index for coal is a purchase price index determined by surveying electric utilities. -- L'indice du charbon thermique pour les 12 mois les plus récents est sujet à révision. L'indice du charbon est un indice du prix d'achat payé par les services publics d'électricité.

(1) Monthly prices are collected and processed three times per annum. The indexes of prior year have a twelve months revision period during the current year. — Des prix mensuels sont relevés et calculés trois fois par année. Les indices de l'année antérieure sont sujets à révision pendant les douze mois de l'année courante.

(1) Revised from January 1979 to October 1980 to include costs associated with the Syncrude Levy and pipeline transportation charges on crude oil. — Indice révisé de janvier 1979 à octobre 1980 pour tenir compte du renchérissement du pétrole brut provoqué par la contribution Syncrude et les frais du transport par pipe-line.

(2) Previously this group was called "Fuels". — Ce groupe s'appelait auparavant "Combustibles".

EXPLANATION OF METHODS USED AND ADDITIONAL SOURCES FOR INDUSTRIAL PRICE INDEXES

Industry Selling Price Indexes (1971 = 100)

Industry Selling Price Indexes are published for approximately 110 industries within manufacturing. Also published are approximately 700 commodity price indexes for the products of these industries. The Classification system is that of the 1970 Standard Industrial Classification, thus permitting the joint use of price statistics with other data such as production and employment similarly classified.

The data upon which both the initial selection of commodities to be priced and responding firms are made, are contained in the census of Manufacturers, a series of annual surveys collecting statistics on shipments of commodities, employment and materials used. Prices are collected for new orders placed on the 15th of each month or the nearest transaction date for the commodity being priced; sales and excise taxes are excluded.

The indexes are gross weighted. They measure the movements of prices of gross shipments of manufacturing industries, including inter-industry shipments between individual industries within manufacturing. Therefore, they duplicate the movements of some prices in the sense that, for example, flour prices are given full weight as part of the shipments of the Flour Mills Industry and then are implicitly counted again through full weighting of the shipment prices of those manufacturing industries which use flour as an ingredient in their outputs, e.g., bread, biscuits, cakes, etc.

The industry classified price indexes are useful for analysis of price movements, for estimation of the constant dollar value of shipments, and for purposes of contract escalations.

A complete description of these indexes is contained in: *Industry Selling Price Indexes: Manufacturing, 1956-1976*, Catalogue 62-543 for the 1971 = 100 based indexes.

Petroleum Refineries Price Index

A revised price sample has been linked into the Petroleum Refineries Price Indexes of the Industry Selling Price Indexes (Table 1), effective February 1977 wherein the number of prices observed and collected has been increased ninefold. The prices for these commodities are the average net realized prices by oil companies for finely specified categories of sale.

The weights assigned to all user categories in the new series correspond to net sales made in 1971 by the respective company in any given region. Each weight represents the importance of the respective user cate-

EXPLICATION DES MÉTHODES UTILISÉES ET SOURCES SUPPLÉMENTAIRES DES PRIX INDUSTRIELS

Indices des prix de vente dans l'industrie (1971 = 100)

Les indices des prix de vente dans l'industrie sont publiés pour environ 110 industries manufacturières. Près de 700 indices des prix des produits de ces industries sont également publiés. Les produits sont classés d'après la Classification des activités économiques de 1970, ce qui permet d'utiliser la statistique des prix avec d'autres données telles que la production et l'emploi classées de la même manière.

Les données sur lesquelles se fonde le choix initial des produits dont il faut déterminer le prix et des établissements enquêtés figurent dans le "recensement des manufactures", série de bulletins sur les enquêtes annuelles au cours desquelles ont recueilli des statistiques sur les expéditions de produits, l'emploi et les matières utilisées. La collecte des prix a lieu le 15 de chaque mois ou à la date de transaction la plus rapprochée pour le produit en question; les taxes de vente et droits d'accise ne sont pas pris en compte.

Il s'agit d'indices pondérés bruts. Ils mesurent les mouvements du prix des livraisons brutes des industries manufacturières, y compris les livraisons interindustrielles des industries manufacturières. Ils prennent donc deux fois en compte les mouvements de certains prix; les prix de la farine, par exemple, font l'objet d'une pondération complète comme ayant trait aux livraisons des meuneries et ils sont comptés à nouveau implicitement du fait de la pondération complète des prix de livraisons des industries manufacturières qui utilisent de la farine comme ingrédient dans leurs produits tels que le pain, les biscuits ou les gâteaux.

Les indices des prix classés par industrie servent à analyser les mouvements de prix, à estimer la valeur des expéditions en dollars constants et à indexer les contrats.

La description complète de ces indices figure dans l'industrie: *Industries manufacturières, 1956-1976*, n° 62-543 au catalogue pour les indices basés sur l'année repère 1971 = 100.

Indice des prix concernant les raffineries de pétrole

Les indices de prix concernant les raffineries de pétrole et faisant partie des indices des prix de vente dans l'industrie (tableau 1) sont fondés sur un nouvel échantillon des prix, à partir de février 1977; dès lors, le nombre de prix observés et recueillis a été multiplié par neuf. Le prix des produits du pétrole est la moyenne des prix nets réels que les sociétés pétrolières exigent pour des catégories bien précises de produits vendus.

Les pondérations attribuées à toutes les catégories d'utilisateurs dans la nouvelle série correspondent aux ventes nettes effectuées en 1971 par la société en question dans une région donnée. Chaque pondération représente l'importance de la

category in the Petroleum Refinery Index PRI) commodity listing, and determines the degree of influence which each price change has on the total index.

The index movement derived from the new sample was linked into the historical series at January 1977 and the procedure is described algebraically below:

$$P_{t/71}^{Pub.} = P_{t/Jan. 77}^{New} \times P_{Jan. 77/71}^{Old}$$

where

$P_{t/71}^{Pub.}$ is the published index for a period subsequent to January 1977 which has been derived from multiplying the January 1977 level of the old index by the price movement derived from the new price sample;

$P_{t/Jan. 77}^{New}$ is the expression for the most recent index derived from the weights and price indexes of the new sample with a reference of January 1977;

$P_{Jan. 77/71}^{Old}$ is the expression for the last published index of January 1977 wherein the old weights and price sample were utilized.

catégorie respective d'utilisateur figurant dans la liste des produits pétroliers pris en compte par les indices de prix et détermine l'influence que chaque changement de prix exerce sur l'indice global.

Les variations de l'indice calculées à partir du nouvel échantillon ont été raccordées à la série historique en janvier 1977; le procédé s'exprime ainsi de manière algébrique:

$$P_{t/71}^{publ.} = P_{t/janv. 77}^{nouv.} \times P_{janv. 77/71}^{anc.}$$

où

$P_{t/71}^{publ.}$ est l'indice publié pour une période ultérieure à janvier 1977, calculé en multipliant le chiffre de l'ancien indice en janvier 1977 par la variation de prix mesurée à partir du nouvel échantillon;

$P_{t/janv. 77}^{nouv.}$ est l'indice le plus récent calculé avec les pondérations et les indices de prix du nouvel échantillon en prenant janvier 1977 comme période de référence;

$P_{janv. 77/71}^{anc.}$ est le dernier indice publié de janvier 1977 faisant appel aux anciennes pondérations et à l'ancien échantillon de prix.

Purchase Price Indexes of Industrial Materials

Secondary Metals (1971 = 100)

Ferrous and non-ferrous indexes are compiled from a series of input prices, inclusive of transportation and brokerage fees, submitted by a wide variety of purchasers from selected industries. Indexes for certain categories of metals cannot be published because of the confidentiality of the data under the Statistics Act.

Steel Foundry Input Index (1971 = 100)

Input price indexes for Steel Foundries (SIC 2910) are calculated using prices covering approximately 80% of total material inputs to the industry. The index for foundry inputs is determined using purchase prices gathered from establishments currently classified to the Iron and Steel Mills industry. These prices are inclusive of all costs incurred by the purchaser to bring the goods to his factory gate (freight, taxes). The weights in this index are derived from 1974 purchases as supplied by the Steel Castings Institute of Canada.

The Steel Foundry Input Index is calculated using the same formula as is described in the description of the Thermal Coal Index. Indexes are available from 1974 onwards, weights are available on request.

Indices du prix d'achat des matériaux industriels

Métaux secondaires (1971-100)

L'indice des métaux ferreux et non ferreux est établi à partir d'une série de prix comprenant les frais de transport et de dédouanement; ces données sont fournies par un large éventail de clients de certaines industries. Confidentiels en vertu de la Loi sur la Statistique, les indices de certaines catégories de métaux ne peuvent être publiés.

Indice des prix des entrées dans les fonderies d'acier (1971 = 100)

L'indice des prix des entrées dans les fonderies d'acier (CAÉ 2910) est calculé à l'aide des prix d'environ 80% des entrées de matières dans cette industrie. Cet indice est établi à partir des prix d'achat déclarés par les établissements classés à l'industrie des fonderies d'acier. Ces prix comprennent toutes les dépenses engagées par l'acheteur pour faire parvenir les produits à la porte de son usine (frais de transport, taxes, etc). Les coefficients de pondération de cet indice sont calculés à partir des achats pour 1974 fournis par le **Steel Castings Institute of Canada**.

L'indice des prix des entrées dans les fonderies d'acier est établi à l'aide de la même équation que l'indice du prix d'achat du charbon thermique. L'indice remonte jusqu'en 1974; les coefficients de pondération sont disponibles sur demande.

Thermal Coal Purchase Price Index (1971 = 100)

This index on a 1971 = 100 base is the result of a renewed demand for coal because of an anticipated shortage in energy supplies. The index for coal is a purchase price index determined by surveying electric utilities, the major users of bituminous coal. It includes purchase prices for both domestic and imported United States coal. Prices are the amount the utilities pay to suppliers, including federal and provincial taxes and freight rates. The weights in this index are derived from the base year purchase prices provided by the firms.

The "Thermal Coal Purchase Price Index" is calculated using the modified Laspayres' fixed weight formula:

$$P_{t/o} = \frac{\sum \frac{P_t}{P_o} V_o}{\sum V_o} \times 100$$

where

$P_{t/o}$ is the price index (expressed as a percentage) which compares prices of the given year t with those of the base year o (1971),

\sum is the sign indicating the summation over all items contained in the index,

P_t is the price of a particular item in the given period t,

P_o is the price of a particular item in the base year o,

V_o is the weight of each particular item in the base year o. Two sets of weights are used. The first set comprises 1971 quantities from 1971 to 1980 inclusive. The second set comprises 1980 quantities starting in January 1981. A link factor has been calculated in December 1980.

$\frac{P_t}{P_o}$ is the price ratio for a particular item (expressed as a percentage) between the given period t and the base year o.

Indexes for establishment and provincial levels cannot be published because of the confidentiality of the data under the Statistics Act.

Indice du prix d'achat du charbon thermique (1971 = 100)

Cet indice de base 1971 = 100 a été établi à la suite d'une nouvelle demande de charbon à cause d'une pénurie prévue en ressources énergétiques. L'indice du charbon est un indice du prix d'achat payé par les services publics d'électricité, principaux utilisateurs de charbon bitumineux. Il comprend à la fois le prix d'achat du charbon domestique et du charbon importé des États-Unis. Les prix sont ceux payés aux fournisseurs, avec les taxes fédérales et provinciales et les taux de fret. Les coefficients de pondération sont calculés à partir du prix d'achat de l'année de base fournis par les entreprises.

L'indice du prix d'achat du charbon thermique est établi à l'aide de l'équation modifiée de Laspayres à pondération fixe:

$$P_{t/o} = \frac{\sum \frac{P_t}{P_o} V_o}{\sum V_o} \times 100$$

où

$P_{t/o}$ est l'indice (exprimé en pourcentage) des prix d'une année t sur ceux de l'année de base o (1971),

\sum est le symbole qui indique la somme de tous les articles de l'indice,

P_t est le prix d'un article particulier pendant la période donnée t,

P_o est le prix d'un article particulier pendant l'année de base o,

V_o est le coefficient de pondération de chaque article particulier pendant l'année de base o. Deux ensembles de coefficients de pondération sont utilisés. Le premier ensemble comprend les quantités de 1971 pour les années de 1971 à 1980 inclusivement. Le second ensemble comprend les quantités de 1980 à partir de janvier 1981. Un facteur de liaison a été calculé en décembre 1980.

$\frac{P_t}{P_o}$ est le rapport (exprimé en pourcentage) du prix d'un article particulier entre la période donnée t et l'année de base o.

Les indices aux niveaux de l'établissement et de la province ne peuvent être publiés puisque la confidentialité des données doit être assurée en vertu de la Loi sur la statistique.

Electric Power Selling Price Indexes (Non-residential)

Brief Description

The Electric Power Selling Price Indexes are designed to measure "pure" price change at the producers' level, i.e., at the "factory gate". Since the industry's transmission lines are considered as part of the producer's operation, the "factory gate" in this index is at the user's end. These indexes are part of a larger system of indexes known as the Industry Selling Price Indexes and conform to the underlying concepts as described in reference document, Catalogue 62-543.

Industry Selling Price Indexes are a measure of pure price change of specified commodities having a fixed time and weight base of 1971-100. Prices are f.o.b. factory gate less discounts and before taxes. The 1971 Gross Shipment Values are gathered by the Census of Manufacturers. In the case of Electric Power Selling Price Indexes, weights are based on the 1971 revenue from electricity sales gathered by Prices Division.

The Electric Power Selling Price Index series is published in two broad customer categories of sales, (1) and index for bills less than 5 000kW and (2) an index for large industrial sales, bills or contracts 5 000 kW and over. Data are presented from 1971 onward, on a monthly basis. Only firm (non-interruptible) power is being surveyed. Interruptible and off-peak power price movement is not included in this index. The survey methodology is described under each of the two broad customer categories.

Whenever specification changes occur thereby altering the quality of the item being priced, quality change evaluations are made to ascertain only pure price change since the commodity characteristics must remain constant in order to measure pure price change over a given period of time, using Laspeyres formula as follows:

$$P_{t/o} = \frac{\sum \frac{P_t}{P_o} V_o}{\sum V_o} \times 100$$

$P_{t/o}$ = index for year t

P_t = price of an item in the given period

P_o = price of an item in year o, the base year

V_o = weight of an item in the base period

P_t/P_o = price ratio for a particular item.

Indices des prix de vente de l'énergie électrique (non résidentielle)

Brève description

Les indices des prix de vente de l'énergie électrique visent à mesurer la variation de prix "pure" au niveau de la production, c'est-à-dire, au "départ de l'usine". Étant donné que les lignes de transport de l'entreprise font ici partie de l'exploitation du producteur, le présent indice prend comme point de "départ de l'usine" l'entrée chez l'utilisateur. Ces indices appartiennent à un plus grand système d'indices appelé Indices de prix de vente dans l'industrie et s'appuient sur les concepts décrits dans le document de référence (n° 62-543 au catalogue).

Les indices de prix de vente dans l'industrie mesurent la variation de prix pure de certains produits ayant une base fixe de période et de pondération (1971-100). Il s'agit des prix f.o.b. départ usine moins les remises et avant impôt. Les valeurs des livraisons brutes sont recueillies par le recensement des manufactures. Dans le cas de l'indice des prix de vente de l'énergie électrique, les pondérations sont basées sur les recettes au titre des ventes de 1971, dont les données ont été recueillies par la Division des prix.

L'indice des prix de vente de l'énergie électrique paraît pour deux grandes catégories de ventes selon le client, à savoir: (1) un indice pour les factures de moins de 5 000 kW et (2) un indice pour les ventes, factures ou contrats industriels de 5 000 kW et plus. Nous publions ces données chaque mois depuis 1971. Seule l'énergie, garantie, non susceptible d'être interrompue fait l'objet du relevé les mouvements de prix de l'énergie susceptible d'être interrompue et de l'énergie des heures creuses n'étant pas compris dans l'indice. Les méthodes d'enquête figurent sous chacune des deux grandes catégories.

Toutes les fois qu'il se produit une variation de la qualité de produit relevé, on procède à une évaluation de la variation de la qualité afin de s'assurer que seule la variation de prix pure est prise en compte, puisque les caractéristiques du produit doivent demeurer constantes si l'on veut mesurer une variation de prix pure sur une période donnée. On se sert de Laspeyres de la façon suivante:

$$P_{t/o} = \frac{\sum \frac{P_t}{P_o} V_o}{\sum V_o} \times 100$$

$P_{t/o}$ = indice pour l'année t

P_t = prix d'un article particulier pendant une période donnée

P_o = prix d'un article particulier pendant l'année o, année de base

V_o = coefficient de pondération d'un article pendant la période de base

P_t/P_o = ratio des prix pour un article particulier.

Methodology

Bills less than 5,000 kW. In this category a "representative bill" was selected subjectively through examination of the bills in each of the municipalities drawn in our provincial samples. Some 120 municipalities were surveyed in the sample and the municipalities selected represent a good coverage of each province in terms of sales. The representative bill was established and its kW demand and kW.h consumption specifications will be held constant until it is found, on periodic review, that the bill is no longer representative of the monthly bills in that municipality. When this occurs a new representative bill will be selected and its price "spliced in" to the original bill to maintain the continuity of the index. Larger municipalities may have more than one representative bill where several significant groupings of bills have been identified. All provinces are included in the survey.

Bills 5,000 kW and over. This customer category presented problems in sampling. The category is composed of customers whose contract prices do not necessarily move as a family of curves. In many cases larger contracts are given a different price adjustment by utilities, than the lesser ones. In order to eliminate this sampling problem, a stratified sampling technique was used whereby homogeneous groups or strata were established and a representative contract was selected subjectively for each interval or stratum, e.g., 5,000-8,000 kW, 8,001-10,000 kW, 10,001-15,000 kW, 15,001-20,000 kW and over 20,000 kW (the specifications used may be theoretical in order to respect the confidentiality of a respondent). Interval boundaries and their representative contracts are held constant through time for each utility. These interval boundaries differ between utilities since each one has a different customer category make-up. The actual index of the "5,000 kW and over" category is a weighted average of the price movements for each interval or stratum within that group. Each interval is weighted according to the utility's revenue from sales for 1971. It is recognized that in the larger utilities the establishment of homogeneous groups of contracts in terms of price movement, especially in the contracts 15,000 kW and over, may not be possible. Consequently, as an alternative, utilities may calculate a weighted average unit price in each of the intervals of strata that are not homogeneous and apply this price movement to a theoretical representative contract. In this way distortions will be minimized and at the total index levels will be averaged out.

Individual indexes are calculated for the province, economic region and at the national level for each of the two broad customer categories described above. The five economic regions are as follows: Pacific (British Columbia), Prairie (Alberta, Saskatchewan and Manitoba), Ontario, Québec and Atlantic (Newfoundland, New Brunswick, Prince Edward Island and Nova Scotia).

Users are cautioned that the indexes indicate only price movement variations and should not be interpreted as representative of individual utilities relative price levels.

Méthodologie

Factures de moins de 5,000 kW. Dans cette catégorie une "facture représentative" a été choisie subjectivement parmi les factures de chacune des municipalités tirées de nos échantillons provinciaux. Les quelque 120 municipalités de l'échantillon sont représentatives des ventes effectuées dans chaque province. À la facture choisie sont attribuées des caractéristiques, c'est-à-dire la demande en kW et la consommation en kW.h, que l'on conserve jusqu'à ce que, après un examen périodique, on estime que la facture ne représente plus le prix mensuel des factures de cette municipalité. Dans ce cas, une nouvelle facture représentative est choisie et son prix est "ajusté" d'après la facture originale pour ne pas créer une discontinuité dans la série. Les grandes municipalités peuvent avoir plus d'une facture représentative lorsque plusieurs groupements de factures ont été établis. Toutes les provinces sont visées par l'enquête.

Factures de 5,000 kW et plus. Cette catégorie de clients présente certains problèmes d'échantillonnage; elle se compose dans son ensemble de clients pour lesquels les mouvements des prix des contrats ne vont pas nécessairement dans le même sens. Dans de nombreux cas, les gros contrats font l'objet d'un rajustement de prix par service, différent de celui des petits contrats. Afin d'éliminer ce problème, on a utilisé une technique d'échantillonnage stratifié pour établir des groupes ou strates homogènes et choisir subjectivement un contrat représentatif (dont les caractéristiques peuvent être "théoriques" de façon à garder secrets les chiffres d'un enquête) pour chaque intervalle ou strate, par ex., 5,000-8,000 kW, 8,001-10,000 kW, 10,001-15,000 kW, 15,001-20,000 kW et plus de 20,000 kW. Ces limites et leurs contrats représentatifs sont tenus constants dans le temps pour chaque service public. Ces limites ne sont pas les mêmes pour chaque service puisque chacun regroupe des clients différents. L'indice réel pour les factures de 5,000 kW et plus est une moyenne pondérée des mouvements de prix pour chaque intervalle ou strate de chaque groupe, chaque intervalle étant pondéré selon les recettes de ce service au titre des ventes de 1971. On sait pertinemment que pour les grands services, l'établissement de groupes de contrats homogènes en termes de mouvement de prix, surtout les contrats de 15,000 kW et plus, peut être impossible; par conséquent, comme solution de rechange, les services peuvent calculer un prix unitaire moyen pondéré pour chaque intervalle ou strate non homogène et appliquer cette variation de prix à un contrat représentatif théorique. De la sorte, les distorsions seront maintenues à un minimum et s'équilibreront aux niveaux de l'indice total.

Chaque indice est calculé selon la province, la région économique et le Canada pour chacune des deux grandes catégories de clients décrites ci-haut. Les cinq régions économiques sont: le Pacifique (Colombie-Britannique), les Prairies (Alberta, Saskatchewan et Manitoba), l'Ontario, le Québec, l'Atlantique (Terre-Neuve, Nouveau-Brunswick, Île-du-Prince-Édouard et Nouvelle-Écosse).

Les utilisateurs sont priés de noter que les indices rendent compte des variations des mouvements des prix seulement et qu'il ne faut pas les considérer comme représentatif des niveaux relatifs des prix des divers services.

Raw Materials Price Index (1977 = 100)

The Raw Materials Price Index measures the price change in the purchase of raw materials by Canadian industry. By the term raw materials is meant those commodities that are the products of the primary stage of production - for example wheat, but not flour, iron ore but not pig iron, and coal but not electricity. Approximately seventy commodities are priced in the index, grouped into eight major components.

The index and the major group indexes, on a 1977 time base, are published monthly in the Daily Bulletin approximately five weeks after the end of the reference month. They are also available at that time on CANSIM in matrix 2892.

The index covers purchases by Canadian industry, generally for further processing, and does not cover exports or flows of raw materials directly to final demand (principally foodstuffs). For example, potatoes bought by food processing manufacturers (for the manufacture of potato chips, or frozen french fries) are included in the index, but those bought by consumers directly are not.

As a purchasers price index, prices should include all charges a purchaser incurs to bring the commodity to his establishment gate. Thus transportation charges, taxes and custom duties are all included. So also are the effects of subsidies, if any are paid to the purchaser. Imports as well as domestically produced goods are included. For example, the pricing of crude oil includes pipe line charges, and levies such as the Petroleum Compensation Charge, but the purchase price of imported oil also reflects the import subsidy paid to purchasers.

In this index it is not always practicable to collect the price changes on all the charges the purchaser incurs. Prices are ideally collected from the purchaser. However, in several cases where there is a conventional pricing point already well known for a commodity that price is used; for example, marketing board prices for eggs and milk, and stockyard prices for some livestock. In a few cases, where data for unprocessed materials are not available, prices are taken for a similar commodity at the next stage of processing (e.g. some non-ferrous metals). A detailed description of the characteristics of prices for any commodity is available from Prices Division on request. Prices sought for each month are those in effect on the 15th of the month or the nearest prior business day. In a few cases, prices used are averages for the week which includes the 15th. Prices are reported directly to Statistics Canada or are taken from trade publications or from publications of other government departments.

Weights were derived from the 1976 Input/Output tables which provide values at purchasers prices of commodities purchased as intermediate inputs. These values have been adjusted for price changes between 1976 and 1977.

Indice des prix des matières brutes (1977 = 100)

L'indice des prix des matières brutes mesure la variation des prix des matières brutes qu'achètent les industries canadiennes. Par matières brutes, on entend les marchandises qui sont le fruit de l'étape primaire de la production. Cela englobe, par exemple, le blé (mais non la farine), le minerai de fer (mais non la fonte en gueuses) et le charbon (mais non l'électricité). Les prix d'environ soixante-dix produits, regroupés en huit grandes composantes, sont relevés aux fins de l'indice.

L'indice d'ensemble et ceux des composantes, dont l'année de base est 1977, paraissent tous les mois dans le Quotidien de Statistique Canada, à peu près cinq semaines après la fin du mois de référence. Ils sont offerts simultanément dans la matrice 2892 de CANSIM.

L'indice vise les achats des industries canadiennes, habituellement en vue d'une transformation additionnelle, mais il ne porte pas sur les exportations, ni sur les matières brutes qui passent directement à la demande finale (principalement des denrées alimentaires). Par exemple, les pommes de terre achetées par les entreprises de conditionnement des aliments pour la fabrication de croustilles ou de frites congelées sont prises en compte dans l'indice, mais celles achetées directement par le consommateur ne le sont pas.

Comme il s'agit d'un indice des prix à l'achat, les prix devraient comprendre toutes les dépenses engagées par l'acheteur pour faire parvenir le produit à la porte de son établissement. Ils englobent donc les frais de transport, les taxes et les droits de douane, de même que les effets de toute subvention versée à l'acheteur. On tient compte des importations et des biens produits au pays. À titre d'exemple, les prix du pétrole brut comprennent les frais de pipe-line et les impôts comme la taxe d'indemnisation pétrolière, mais le prix d'achat du pétrole importé traduit également la subvention à l'importation versée aux acheteurs.

Il n'est pas toujours possible de relever les variations de toutes les dépenses engagées par l'acheteur, auprès duquel les prix sont idéalement recueillis. Il peut néanmoins exister des points de relevé bien connus pour un produit donné (offices de commercialisation des oeufs et du lait, parcs à bestiaux, etc.); on préférera dans ces cas recourir aux prix donnés par ces intermédiaires. Lorsqu'il est impossible d'obtenir les renseignements pour une matière non transformée, les prix sont prélevés pour un produit semblable à l'étape suivante de la transformation (c'est le cas notamment de certains métaux non ferreux). La Division des prix fera parvenir sur demande une description détaillée des caractéristiques des prix d'un produit donnée. Les prix recueillis chaque mois sont ceux pratiqués le 15 du mois ou le dernier jour ouvrable qui le précède. Dans certains cas, les prix utilisés représentent la moyenne de la semaine qui englobe le 15. Les prix qui ne sont pas déclarés directement à Statistique Canada sont tirés de revues spécialisées ou des publications d'autres ministères.

Les pondérations sont fondées sur les tableaux des entrées-sorties de 1976, qui donnent les valeurs (prix d'achat) des produits acquis à titre d'entrées intermédiaires. Les valeurs en cause ont été modifiées en fonction de la variation des prix entre 1976 et 1977.

The index is calculated according to the following formula:

$$I_s = \frac{1}{n} \sum P_t / P_{77} \times 100$$

$$I = \frac{\sum I_s \left(\frac{P_{77}}{P_{76}} \cdot v_{76} \right)}{\left(\frac{P_{77}}{P_{76}} \cdot v_{76} \right)}$$

where

I_s = commodity index

P_t = current level of price quote

P_{77} = average level of price quote in 1977

n = number of price quotes for the commodity

I = major group or total index

P_{77}/P_{76} = price movement from 1976 to 1977 of commodity

V_{76} = expenditure in 1976 on commodity.

Individual price quotations are equally weighted within the commodity indexes except in a few instances where data are available to allow prices to be weighted according to their market shares.

L'indice est calculé selon la formule suivante:

$$I_s = \frac{1}{n} \sum P_t / P_{77} \times 100$$

$$I = \frac{\sum I_s \left(\frac{P_{77}}{P_{76}} \cdot v_{76} \right)}{\left(\frac{P_{77}}{P_{76}} \cdot v_{76} \right)}$$

où

I_s = l'indice du produit

P_t = le prix actuel du produit, d'après le relevé

P_{77} = le prix moyen du produit en 1977

n = le nombre de relevés effectués pour le produit

I = le groupe ou l'indice d'ensemble

P_{77}/P_{76} = la variation des prix du produit de 1976 à 1977

V_{76} = les dépenses consacrées au produit en 1976.

En ce qui concerne les indices des produits, les observations individuelles des prix ont toutes la même pondération, sauf lorsque des données connexes permettent de pondérer les prix en fonction des parts du marché.

Index weights for the major groups and their commodity content are presented in the following table:

Le tableau qui suit renferme les pondérations relatives aux groupes et aux produits qui les composent:

Total major groupes	Weights 100%	Commodities within each group
Ensemble des groupes	Pondération 100%	Produits dans chaque groupe
Vegetable products - sub- stances végétales	12	Fresh fruit, wheat, other grains, oil seeds, natural rubber, raw sugar, cocoa, coffee, tea, fresh vegetables, tobacco, hay - Fruits frais, blé, autres céréales, oléagineux, caoutchouc brut, sucre brut, cacao, café, thé, légumes frais, tabac, foin
Animals, and animal prod- ucts - Animaux et sub- stances animales	23	Furs, hides and skins, cattle and calves, sheep And lambs, hogs, poultry, milk, eggs, fish - Fourrures, cuirs et peaux, veaux et bovins, moutons et agneaux, porcs, volaille, lait, oeufs, poisson
Textile - Matière tex- tiles	1	Cotton, wool, man-made fibre - Coton, laine, fibres synthétiques
Wood - Bois	11	Logs, pulpwood - billes, bois à pâte
Ferrous materials - Matières ferreuses	3	Scrap, iron ore - Ferraille, minerai de fer
Non-ferrous metals - Métaux non ferreux	6	Aluminum, copper, lead, nickel, gold, other precious metals, tin, zinc, scrap - Aluminium, cuivre, plomb, nickel, or, autres métaux précieux, étain, zinc, déchets
Non-metallic minerals - Minéraux non métalliques	4	Sulphur, sand and gravel, asbestos, stone, gypsum, potash - Soufre, sable et gravier, amiante, pierre, gypse, potasse
Coal, crude oil, natural gas - Charbon, pétrole brut, gaz naturel	40	Thermal coal, crude oil, natural gas - Charbon thermique, pétrole brut, gaz naturel

Users who wish to comment on the indexes presented here are invited to contact the Goods and Service Producing Industries Prices Section, Prices Division, telephone (613) 995-5761.

Les utilisateurs qui auraient des observations à faire au sujet de ces indices sont priés d'en faire part à la Section des prix des industries de biens et de services, Division des prix, téléphone (613) 995-5761.

Data in Many Forms ...

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer print-outs, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

How to Obtain More Information

Inquiries about this publication and related statistics or services should be directed to:

Goods and Services Producing Industries Section,
Prices Division

Statistics Canada, Ottawa, K1A 0T6 (Telephone: 990-9606/07) or to the Statistics Canada reference centre in:

St. John's	(772-4073)	Sturgeon Falls	(753-4888)
Halifax	(426-5331)	Winnipeg	(949-4020)
Montréal	(283-5725)	Regina	(359-5405)
Ottawa	(990-8116)	Edmonton	(420-3027)
Toronto	(973-6586)	Vancouver	(666-3691)
Credit Card only (973-8018)			

Toll-free access is provided in all provinces and territories, **for users who reside outside the local dialing area** of any of the regional reference centres.

Des données sous plusieurs formes ...

Statistique Canada diffuse les données sous formes diverses. Outre les publications, des totalisations habituelles et spéciales sont offertes sur imprimés d'ordinateur, sur microfiches et microfilms et sur bandes magnétiques. Des cartes et d'autres documents de référence géographiques sont disponibles pour certaines sortes de données. L'accès direct à des données agrégées est possible par le truchement de CANSIM, la base de données ordiolingue et le système d'extraction de Statistique Canada.

Comment obtenir d'autres renseignements

Toutes demandes de renseignements au sujet de cette publication ou de statistiques et services connexes doivent être adressées à:

Section des industries de biens et de services,
Division des prix,

Statistique Canada, Ottawa, K1A 0T6 (téléphone: 990-9606/07) ou au centre de consultation de Statistique Canada à:

St. John's	(772-4073)	Sturgeon Falls	(753-4888)
Halifax	(426-5331)	Winnipeg	(949-4020)
Montréal	(283-5725)	Regina	(359-5405)
Ottawa	(990-8116)	Edmonton	(420-3027)
Toronto	(973-6586)	Vancouver	(666-3691)
Carte de crédit seulement (973-8018)			

Un service d'appel interurbain sans frais est offert, dans toutes les provinces et dans les territoires, aux **utilisateurs qui habitent à l'extérieur des zones de communication locale** des centres régionaux de consultation.

x confidential to meet secrecy requirements of the Statistics Act.

NOTE

CANSIM® (Canadian Socio-Economic Information Management System) is Statistics Canada's computerized data bank and its supporting software. Most of the data appearing in this publication, as well as many other data series are available from CANSIM via terminal, on computer printouts, or in machine readable form. Historical and more timely data which is not included in this publication are available from CANSIM.

Table 1 (i.e., Industry Selling Price Indexes by Major Groups, Industries and Selected Commodities) includes the identification codes required to order series from CANSIM. For example, to obtain the Industry Selling Price Index: Manufacturing, the code used is D 500000.

For further information write to CANSIM Division, Statistics Canada, Ottawa, K1A 0T6 or call (613) 990-8200.

®Registered Trade Mark of Statistics Canada.

Revisions

Unless otherwise stated, price indexes in this publication are subject to revision for the most recent six months shown. Any revisions beyond these limits are so indicated.

Signes conventionnels

Les signes conventionnels suivants sont employés uniformément dans les publications de Statistique Canada.

.. nombres indisponibles.

... n'ayant pas lieu de figurer.

- néant ou zéro.

-- nombres infimes.

p nombres provisoires.

r nombres rectifiés.

x confidentiel en vertu des dispositions de la Loi sur la statistique relatives au secret.

NOTA

Le CANSIM® (Système canadien d'information socio-économique) est le système de Statistique Canada qui se compose d'une banque de données informatisée et de son logiciel de soutien. La plupart des données présentées dans cette publication et beaucoup d'autres données contenues dans le CANSIM peuvent être extraites par l'intermédiaire d'un terminal, sous forme d'imprimés d'ordinateur ou sous forme lisible par machine. Des données historiques et des données plus actuelles qui n'apparaissent pas dans cette publication sont disponibles de CANSIM.

Le tableau 1 (Indice des prix de vente dans l'industrie par groupes, industries et par certains produits) contient les numéros d'identification qui servent à l'extraction des données de CANSIM. Par exemple, pour obtenir l'Indice de prix de vente dans l'industrie: industries manufacturières, le numéros d'identification est D 500000.

Pour plus de renseignements, écrivez à la Division CANSIM, Statistique Canada, Ottawa, K1A 0T6, ou téléphonez à (613) 990-8200.

®Marque déposée de Statistique Canada.

Révisions

Sauf avis contraire, les indices de prix contenus dans la présente publication sont susceptibles d'être révisés pour les six derniers mois indiqués. Toute révision portant sur une plus longue période est indiquée.

17. Non-metallic mineral products industries - Fabrication de produits minéraux non métalliques	342.0	341.9	327.0	-	4.6	-	0.2	3.2
18. Petroleum and Coal Products(3) Fabrication de produits de pétrole et du charbon(3)	745.2	745.2	704.7	-	5.7		0.5	4.2
19. Chemical and chemical products in- dustries - Industrie chimique	337.3	335.8	328.4	0.4	2.7	0.03	0.2	6.6
Other major groups(4) - Autres groupes(4)	270.2	269.4	261.2	0.3	3.4	0.04	0.4	15.6
Special aggregations - Agrégations spéciales:								
Total food and beverage industries excluding alcoholic beverages - Ensemble des industries des aliments et boissons sauf les boissons alcooliques	324.9	326.9	326.1	- 0.6	- 0.4	- 0.11	- 0.1	18.2
Total non-food industries, including alcoholic beverages - Ensemble des industries non alimentaires incluant les boissons alcooliques	317.5	317.1	309.8	0.1	2.5	0.10	2.0	81.8
Basic industries, major groups 8, 10, 12, 17 - Industries de base, groupes 8, 10, 12, 17	320.3	320.4	319.6	-	0.2	0.01		24.5
Other non-food industries - Autres industries non alimentaires	316.3	315.8	305.6	0.2	3.5	0.09	2.0	57.3

(1) This shows the amount by which the movement of each index would move the total, in the absence of any change in the other indexes.

(1) Ce chiffre donne l'ampleur de la variation qu'occasionnerait dans l'indice d'ensemble un mouvement d'un indice donné si tous les autres indices demeuraient inchangés.

(2) These indexes are preliminary.

(2) Ces indices sont provisoires.

(3) Major group 18 is estimated for the current month.

(3) Les données pour le groupe 18 ont été estimées pour le mois courant.

(4) Included are the following major groups: 7 - Clothing industries, 15 - Transportation equipment industries, 20 - Miscellaneous manufacturing industries.

(4) Les groupes suivants sont inclus: 7 - Industrie de l'habillement, 15 - Fabrication d'équipement de transport, 20 - Industries manufacturières diverses.

- (1) Gross weighted, including inter-industry shipments. Explanation of methods follows Table 4. — Indice pondéré brut comprenant les livraisons inter-industrielles. L'explication des méthodes est donnée à la suite du tableau 4.
- (2) The Petroleum Refineries index (D544001 18-3651) is estimated for the current month. The movement of this index is reflected in Major Group 18 and also in the Industry Selling Price total for Manufacturing. — L'indice des raffineries de pétrole (D544001 18-3651) pour le mois courant a été estimé. Le mouvement de cet indice influe sur le groupe 18 de même que sur l'indice total des prix de vente dans l'industrie manufacturière.
- (3) Only British Columbia prices for both rough and planed hemlock are included. — Seuls les prix de Colombie-Britannique du pruche à l'état brut et plané sont inclus.

(1) Thermal Coal Index for the most recent twelve months is subject to revision. The index for coal is a purchase price index determined by surveying electric utilities. — L'indice du charbon thermique pour les 12 mois les plus récents est sujet à révision. L'indice du charbon est un indice du prix d'achat payé par les services publics d'électricité.

(1) Revised from January 1979 to October 1980 to include costs associated with the Syncrude Levy and pipeline transportation charges on crude oil. — Indice révisé de janvier 1979 à octobre 1980 pour tenir compte du renchérissement du pétrole brut provoqué par la contribution Syncrude et les frais du transport par pipeline.

(2) Previously this group was called "Fuels". — Ce groupe s'appelait auparavant "Combustibles".

EXPLANATION OF METHODS USED AND ADDITIONAL SOURCES FOR INDUSTRIAL PRICE INDEXES

Industry Selling Price Indexes (1971 = 100)

Industry Selling Price Indexes are published for approximately 110 industries within manufacturing. Also published are approximately 700 commodity price indexes for the products of these industries. The Classification system is that of the 1970 Standard Industrial Classification, thus permitting the joint use of price statistics with other data such as production and employment similarly classified.

The data upon which both the initial selection of commodities to be priced and responding firms are made, are contained in the census of Manufacturers, a series of annual surveys collecting statistics on shipments of commodities, employment and materials used. Prices are collected for new orders placed on the 15th of each month or the nearest transaction date for the commodity being priced; sales and excise taxes are excluded.

The indexes are gross weighted. They measure the movements of prices of gross shipments of manufacturing industries, including inter-industry shipments between individual industries within manufacturing. Therefore, they duplicate the movements of some prices in the sense that, for example, flour prices are given full weight as part of the shipments of the Flour Mills Industry and then are implicitly counted again through full weighting of the shipment prices of those manufacturing industries which use flour as an ingredient in their outputs, e.g., bread, biscuits, cakes, etc.

The industry classified price indexes are useful for analysis of price movements, for estimation of the constant dollar value of shipments, and for purposes of contract escalations.

A complete description of these indexes is contained in: *Industry Selling Price Indexes: Manufacturing, 1956-1976*, Catalogue 62-543 for the 1971 = 100 based indexes.

Petroleum Refineries Price Index

A revised price sample has been linked into the Petroleum Refineries Price Indexes of the Industry Selling Price Indexes (Table 1), effective February 1977 wherein the number of prices observed and collected has been increased ninefold. The prices for these commodities are the average net realized prices by oil companies for finely specified categories of sale.

The weights assigned to all user categories in the new series correspond to net sales made in 1971 by the respective company in any given region. Each weight represents the importance of the respective user cate-

EXPLICATION DES MÉTHODES UTILISÉES ET SOURCES SUPPLÉMENTAIRES DES PRIX INDUSTRIELS

Indices des prix de vente dans l'industrie (1971 = 100)

Les indices des prix de vente dans l'industrie sont publiés pour environ 110 industries manufacturières. Près de 700 indices des prix des produits de ces industries sont également publiés. Les produits sont classés d'après la Classification des activités économiques de 1970, ce qui permet d'utiliser la statistique des prix avec d'autres données telles que la production et l'emploi classées de la même manière.

Les données sur lesquelles se fonde le choix initial des produits dont il faut déterminer le prix et des établissements enquêtés figurent dans le "recensement des manufactures", série de bulletins sur les enquêtes annuelles au cours desquelles ont recueilli des statistiques sur les expéditions de produits, l'emploi et les matières utilisées. La collecte des prix a lieu le 15 de chaque mois ou à la date de transaction la plus rapprochée pour le produit en question; les taxes de vente et droits d'accise ne sont pas pris en compte.

Il s'agit d'indices pondérés bruts. Ils mesurent les mouvements du prix des livraisons brutes des industries manufacturières, y compris les livraisons interindustrielles des industries manufacturières. Ils prennent donc deux fois en compte les mouvements de certains prix; les prix de la farine, par exemple, font l'objet d'une pondération complète comme ayant trait aux livraisons des meuneries et ils sont comptés à nouveau implicitement du fait de la pondération complète des prix de livraisons des industries manufacturières qui utilisent de la farine comme ingrédient dans leurs produits tels que le pain, les biscuits ou les gâteaux.

Les indices des prix classés par industrie servent à analyser les mouvements de prix, à estimer la valeur des expéditions en dollars constants et à indexer les contrats.

La description complète de ces indices figure dans l'industrie: *Industries manufacturières, 1956-1976*, n° 62-543 au catalogue pour les indices basés sur l'année repère 1971 = 100.

Indice des prix concernant les raffineries de pétrole

Les indices de prix concernant les raffineries de pétrole et faisant partie des indices des prix de vente dans l'industrie (tableau 1) sont fondés sur un nouvel échantillon des prix, à partir de février 1977; dès lors, le nombre de prix observés et recueillis a été multiplié par neuf. Le prix des produits du pétrole est la moyenne des prix nets réels que les sociétés pétrolières exigent pour des catégories bien précises de produits vendus.

Les pondérations attribuées à toutes les catégories d'utilisateurs dans la nouvelle série correspondent aux ventes nettes effectuées en 1971 par la société en question dans une région donnée. Chaque pondération représente l'importance de la

gory in the Petroleum Refinery Index PRI) commodity listing, and determines the degree of influence which each price change has on the total index.

The index movement derived from the new sample was linked into the historical series at January 1977 and the procedure is described algebraically below:

$$P_{t/71}^{Pub.} = P_{t/Jan. 77}^{New} \times P_{Jan. 77/71}^{Old}$$

where

$P_{t/71}^{Pub}$ is the published index for a period subsequent to January 1977 which has been derived from multiplying the January 1977 level of the old index by the price movement derived from the new price sample;

$P_{t/Jan. 77}^{New}$ is the expression for the most recent index derived from the weights and price indexes of the new sample with a reference of January 1977;

$P_{Jan. 77/71}^{Old}$ is the expression for the last published index of January 1977 wherein the old weights and price sample were utilized.

catégorie respective d'utilisateur figurant dans la liste des produits pétroliers pris en compte par les indices de prix et détermine l'influence que chaque changement de prix exerce sur l'indice global.

Les variations de l'indice calculées à partir du nouvel échantillon ont été raccordées à la série historique en janvier 1977; le procédé s'exprime ainsi de manière algébrique:

$$P_{t/71}^{publ.} = P_{t/janv. 77}^{nouv.} \times P_{janv. 77/71}^{anc.}$$

où

$P_{t/71}^{publ.}$ est l'indice publié pour une période ultérieure à janvier 1977, calculé en multipliant le chiffre de l'ancien indice en janvier 1977 par la variation de prix mesurée à partir du nouvel échantillon;

$P_{t/janv. 77}^{nouv.}$ est l'indice le plus récent calculé avec les pondérations et les indices de prix du nouvel échantillon en prenant janvier 1977 comme période de référence;

$P_{janv. 77/71}^{anc.}$ est le dernier indice publié de janvier 1977 faisant appel aux anciennes pondérations et à l'ancien échantillon de prix.

Purchase Price Indexes of Industrial Materials

Secondary Metals (1971 = 100)

Ferrous and non-ferrous indexes are compiled from a series of input prices, inclusive of transportation and brokerage fees, submitted by a wide variety of purchasers from selected industries. Indexes for certain categories of metals cannot be published because of the confidentiality of the data under the Statistics Act.

Steel Foundry Input Index (1971 = 100)

Input price indexes for Steel Foundries (SIC 2910) are calculated using prices covering approximately 80% of total material inputs to the industry. The index for foundry inputs is determined using purchase prices gathered from establishments currently classified to the Iron and Steel Mills industry. These prices are inclusive of all costs incurred by the purchaser to bring the goods to his factory gate (freight, taxes). The weights in this index are derived from 1974 purchases as supplied by the Steel Castings Institute of Canada.

The Steel Foundry Input Index is calculated using the same formula as is described in the description of the Thermal Coal Index. Indexes are available from 1974 onwards, weights are available on request.

Indices du prix d'achat des matériaux industriels

Métaux secondaires (1971-100)

L'indice des métaux ferreux et non ferreux est établi à partir d'une série de prix comprenant les frais de transport et de dédouanement; ces données sont fournies par un large éventail de clients de certaines industries. Confidentiels en vertu de la Loi sur la Statistique, les indices de certaines catégories de métaux ne peuvent être publiés.

Indice des prix des entrées dans les fonderies d'acier (1971 = 100)

L'indice des prix des entrées dans les fonderies d'acier (CAÉ 2910) est calculé à l'aide des prix d'environ 80% des entrées de matières dans cette industrie. Cet indice est établi à partir des prix d'achat déclarés par les établissements classés à l'industrie des fonderies d'acier. Ces prix comprennent toutes les dépenses engagées par l'acheteur pour faire parvenir les produits à la porte de son usine (frais de transport, taxes, etc). Les coefficients de pondération de cet indice sont calculés à partir des achats pour 1974 fournis par le **Steel Castings Institute of Canada**.

L'indice des prix des entrées dans les fonderies d'acier est établi à l'aide de la même équation que l'indice du prix d'achat du charbon thermique. L'indice remonte jusqu'en 1974; les coefficients de pondération sont disponibles sur demande.

Thermal Coal Purchase Price Index (1971 = 100)

This index on a 1971 = 100 base is the result of a renewed demand for coal because of an anticipated shortage in energy supplies. The index for coal is a purchase price index determined by surveying electric utilities, the major users of bituminous coal. It includes purchase prices for both domestic and imported United States coal. Prices are the amount the utilities pay to suppliers, including federal and provincial taxes and freight rates. The weights in this index are derived from the base year purchase prices provided by the firms.

The "Thermal Coal Purchase Price Index" is calculated using the modified Laspayres' fixed weight formula:

$$P_{t/o} = \frac{\sum \frac{P_t}{P_o} V_o}{\sum V_o} \times 100$$

where

$P_{t/o}$ is the price index (expressed as a percentage) which compares prices of the given year t with those of the base year o (1971),

Σ is the sign indicating the summation over all items contained in the index,

P_t is the price of a particular item in the given period t,

P_o is the price of a particular item in the base year o,

V_o is the weight of each particular item in the base year o. Two sets of weights are used. The first set comprises 1971 quantities from 1971 to 1980 inclusive. The second set comprises 1980 quantities starting in January 1981. A link factor has been calculated in December 1980.

$\frac{P_t}{P_o}$ is the price ratio for a particular item (expressed as a percentage) between the given period t and the base year o.

Indexes for establishment and provincial levels cannot be published because of the confidentiality of the data under the Statistics Act.

Indice du prix d'achat du charbon thermique (1971 = 100)

Cet indice de base 1971 = 100 a été établi à la suite d'une nouvelle demande de charbon à cause d'une pénurie prévue en ressources énergétiques. L'indice du charbon est un indice du prix d'achat payé par les services publics d'électricité, principaux utilisateurs de charbon bitumineux. Il comprend à la fois le prix d'achat du charbon domestique et du charbon importé des États-Unis. Les prix sont ceux payés aux fournisseurs, avec les taxes fédérales et provinciales et les taux de fret. Les coefficients de pondération sont calculés à partir du prix d'achat de l'année de base fournis par les entreprises.

L'indice du prix d'achat du charbon thermique" est établi à l'aide de l'équation modifiée de Laspayres à pondération fixe:

$$P_{t/o} = \frac{\sum \frac{P_t}{P_o} V_o}{\sum V_o} \times 100$$

où

$P_{t/o}$ est l'indice (exprimé en pourcentage) des prix d'une année t sur ceux de l'année de base o (1971),

Σ est le symbole qui indique la somme de tous les articles de l'indice,

P_t est le prix d'un article particulier pendant la période donnée t,

P_o est le prix d'un article particulier pendant l'année de base o,

V_o est le coefficient de pondération de chaque article particulier pendant l'année de base o. Deux ensembles de coefficients de pondération sont utilisés. Le premier ensemble comprend les quantités de 1971 pour les années de 1971 à 1980 inclusivement. Le second ensemble comprend les quantités de 1980 à partir de janvier 1981. Un facteur de liaison a été calculé en décembre 1980.

$\frac{P_t}{P_o}$ est le rapport (exprimé en pourcentage) du prix d'un article particulier entre la période donnée t et l'année de base o.

Les indices aux niveaux de l'établissement et de la province ne peuvent être publiés puisque la confidentialité des données doit être assurée en vertu de la Loi sur la statistique.

Electric Power Selling Price Indexes (Non-residential)

Brief Description

The Electric Power Selling Price Indexes are designed to measure "pure" price change at the producers' level, i.e., at the "factory gate". Since the industry's transmission lines are considered as part of the producer's operation, the "factory gate" in this index is at the user's end. These indexes are part of a larger system of indexes known as the Industry Selling Price Indexes and conform to the underlying concepts as described in reference document, Catalogue 62-543.

Industry Selling Price Indexes are a measure of pure price change of specified commodities having a fixed time and weight base of 1971-100. Prices are f.o.b. factory gate less discounts and before taxes. The 1971 Gross Shipment Values are gathered by the Census of Manufacturers. In the case of Electric Power Selling Price Indexes, weights are based on the 1971 revenue from electricity sales gathered by Prices Division.

The Electric Power Selling Price Index series is published in two broad customer categories of sales, (1) and index for bills less than 5 000kW and (2) an index for large industrial sales, bills or contracts 5 000 kW and over. Data are presented from 1971 onward, on a monthly basis. Only firm (non-interruptible) power is being surveyed. Interruptible and off-peak power price movement is not included in this index. The survey methodology is described under each of the two broad customer categories.

Whenever specification changes occur thereby altering the quality of the item being priced, quality change evaluations are made to ascertain only pure price change since the commodity characteristics must remain constant in order to measure pure price change over a given period of time, using Laspeyres formula as follows:

$$P_{t/o} = \frac{\sum \frac{P_t}{P_o} V_o}{\sum V_o} \times 100$$

$P_{t/o}$ = index for year t

P_t = price of an item in the given period

P_o = price of an item in year o, the base year

V_o = weight of an item in the base period

P_t/P_o = price ratio for a particular item.

Indices des prix de vente de l'énergie électrique (non résidentielle)

Brève description

Les indices des prix de vente de l'énergie électrique visent à mesurer la variation de prix "pure" au niveau de la production, c'est-à-dire, au "départ de l'usine". Étant donné que les lignes de transport de l'entreprise font ici partie de l'exploitation du producteur, le présent indice prend comme point de "départ de l'usine" l'entrée chez l'utilisateur. Ces indices appartiennent à un plus grand système d'indices appelé Indices de prix de vente dans l'industrie et s'appuient sur les concepts décrits dans le document de référence (n° 62-543 au catalogue).

Les indices de prix de vente dans l'industrie mesurent la variation de prix pure de certains produits ayant une base fixe de période et de pondération (1971-100). Il s'agit des prix f.o.b. départ usine moins les remises et avant impôt. Les valeurs des livraisons brutes sont recueillies par le recensement des manufactures. Dans le cas de l'indice des prix de vente de l'énergie électrique, les pondérations sont basées sur les recettes au titre des ventes de 1971, dont les données ont été recueillies par la Division des prix.

L'indice des prix de vente de l'énergie électrique paraît pour deux grandes catégories de ventes selon le client, à savoir: (1) un indice pour les factures de moins de 5 000 kW et (2) un indice pour les ventes, factures ou contrats industriels de 5 000 kW et plus. Nous publions ces données chaque mois depuis 1971. Seule l'énergie, garantie, non susceptible d'être interrompue fait l'objet du relevé les mouvements de prix de l'énergie susceptible d'être interrompue et de l'énergie des heures creuses n'étant pas compris dans l'indice. Les méthodes d'enquête figurent sous chacune des deux grandes catégories.

Toutes les fois qu'il se produit une variation de la qualité de produit relevé, on procède à une évaluation de la variation de la qualité afin de s'assurer que seule la variation de prix pure est prise en compte, puisque les caractéristiques du produit doivent demeurer constantes si l'on veut mesurer une variation de prix pure sur une période donnée. On se sert de Laspeyres de la façon suivante:

$$P_{t/o} = \frac{\sum \frac{P_t}{P_o} V_o}{\sum V_o} \times 100$$

$P_{t/o}$ = indice pour l'année t

P_t = prix d'un article particulier pendant une période donnée

P_o = prix d'un article particulier pendant l'année o, année de base

V_o = coefficient de pondération d'un article pendant la période de base

P_t/P_o = ratio des prix pour un article particulier.

Methodology

Bills less than 5,000 kW. In this category a "representative bill" was selected subjectively through examination of the bills in each of the municipalities drawn in our provincial samples. Some 120 municipalities were surveyed in the sample and the municipalities selected represent a good coverage of each province in terms of sales. The representative bill was established and its kW demand and kW.h consumption specifications will be held constant until it is found, on periodic review, that the bill is no longer representative of the monthly bills in that municipality. When this occurs a new representative bill will be selected and its price "spliced in" to the original bill to maintain the continuity of the index. Larger municipalities may have more than one representative bill where several significant groupings of bills have been identified. All provinces are included in the survey.

Bills 5,000 kW and over. This customer category presented problems in sampling. The category is composed of customers whose contract prices do not necessarily move as a family of curves. In many cases larger contracts are given a different price adjustment by utilities, than the lesser ones. In order to eliminate this sampling problem, a stratified sampling technique was used whereby homogeneous groups or strata were established and a representative contract was selected subjectively for each interval or stratum, e.g., 5,000-8,000 kW, 8,001-10,000 kW, 10,001-15,000 kW, 15,001-20,000 kW and over 20,000 kW (the specifications used may be theoretical in order to respect the confidentiality of a respondent). Interval boundaries and their representative contracts are held constant through time for each utility. These interval boundaries differ between utilities since each one has a different customer category make-up. The actual index of the "5,000 kW and over" category is a weighted average of the price movements for each interval or stratum within that group. Each interval is weighted according to the utility's revenue from sales for 1971. It is recognized that in the larger utilities the establishment of homogeneous groups of contracts in terms of price movement, especially in the contracts 15,000 kW and over, may not be possible. Consequently, as an alternative, utilities may calculate a weighted average unit price in each of the intervals of strata that are not homogeneous and apply this price movement to a theoretical representative contract. In this way distortions will be minimized and at the total index levels will be averaged out.

Individual indexes are calculated for the province, economic region and at the national level for each of the two broad customer categories described above. The five economic regions are as follows: Pacific (British Columbia), Prairie (Alberta, Saskatchewan and Manitoba), Ontario, Québec and Atlantic (Newfoundland, New Brunswick, Prince Edward Island and Nova Scotia).

Users are cautioned that the indexes indicate only price movement variations and should not be interpreted as representative of individual utilities relative price levels.

Méthodologie

Factures de moins de 5,000 kW. Dans cette catégorie une "facture représentative" a été choisie subjectivement parmi les factures de chacune des municipalités tirées de nos échantillons provinciaux. Les quelque 120 municipalités de l'échantillon sont représentatives des ventes effectuées dans chaque province. À la facture choisie sont attribuées des caractéristiques, c'est-à-dire la demande en kW et la consommation en kW.h, que l'on conserve jusqu'à ce que, après un examen périodique, on estime que la facture ne représente plus le prix mensuel des factures de cette municipalité. Dans ce cas, une nouvelle facture représentative est choisie et son prix est "ajusté" d'après la facture originale pour ne pas créer une discontinuité dans la série. Les grandes municipalités peuvent avoir plus d'une facture représentative lorsque plusieurs groupements de factures ont été établis. Toutes les provinces sont visées par l'enquête.

Factures de 5,000 kW et plus. Cette catégorie de clients présente certains problèmes d'échantillonnage; elle se compose dans son ensemble de clients pour lesquels les mouvements des prix des contrats ne vont pas nécessairement dans le même sens. Dans de nombreux cas, les gros contrats font l'objet d'un rajustement de prix par service, différent de celui des petits contrats. Afin d'éliminer ce problème, on a utilisé une technique d'échantillonnage stratifié pour établir des groupes ou strates homogènes et choisir subjectivement un contrat représentatif (dont les caractéristiques peuvent être "théoriques" de façon à garder secrets les chiffres d'un enquête) pour chaque intervalle ou strate, par ex., 5,000-8,000 kW, 8,001-10,000 kW, 10,001-15,000 kW, 15,001-20,000 kW et plus de 20,000 kW. Ces limites et leurs contrats représentatifs sont tenus constants dans le temps pour chaque service public. Ces limites ne sont pas les mêmes pour chaque service puisque chacun regroupe des clients différents. L'indice réel pour les factures de 5,000 kW et plus est une moyenne pondérée des mouvements de prix pour chaque intervalle ou strate de chaque groupe, chaque intervalle étant pondéré selon les recettes de ce service au titre des ventes de 1971. On sait pertinemment que pour les grands services, l'établissement de groupes de contrats homogènes en termes de mouvement de prix, surtout les contrats de 15,000 kW et plus, peut être impossible; par conséquent, comme solution de rechange, les services peuvent calculer un prix unitaire moyen pondéré pour chaque intervalle ou strate non homogène et appliquer cette variation de prix à un contrat représentatif théorique. De la sorte, les distorsions seront maintenues à un minimum et s'équilibreront aux niveaux de l'indice total.

Chaque indice est calculé selon la province, la région économique et le Canada pour chacune des deux grandes catégories de clients décrites ci-haut. Les cinq régions économiques sont: le Pacifique (Colombie-Britannique), les Prairies (Alberta, Saskatchewan et Manitoba), l'Ontario, le Québec, l'Atlantique (Terre-Neuve, Nouveau-Brunswick, Île-du-Prince-Édouard et Nouvelle-Écosse).

Les utilisateurs sont priés de noter que les indices rendent compte des variations des mouvements des prix seulement et qu'il ne faut pas les considérer comme représentatif des niveaux relatifs des prix des divers services.

Raw Materials Price Index (1977 = 100)

The Raw Materials Price Index measures the price change in the purchase of raw materials by Canadian Industry. By the term raw materials is meant those commodities that are the products of the primary stage of production - for example wheat, but not flour, iron ore but not pig iron, and coal but not electricity. Approximately seventy commodities are priced in the index, grouped into eight major components.

The index and the major group indexes, on a 1977 time base, are published monthly in the Daily Bulletin approximately five weeks after the end of the reference month. They are also available at that time on CANSIM in matrix 2892.

The index covers purchases by Canadian industry, generally for further processing, and does not cover exports or flows of raw materials directly to final demand (principally foodstuffs). For example, potatoes bought by food processing manufacturers (for the manufacture of potato chips, or frozen french fries) are included in the index, but those bought by consumers directly are not.

As a purchasers price index, prices should include all charges a purchaser incurs to bring the commodity to his establishment gate. Thus transportation charges, taxes and custom duties are all included. So also are the effects of subsidies, if any are paid to the purchaser. Imports as well as domestically produced goods are included. For example, the pricing of crude oil includes pipe line charges, and levies such as the Petroleum Compensation Charge, but the purchase price of imported oil also reflects the import subsidy paid to purchasers.

In this index it is not always practicable to collect the price changes on all the charges the purchaser incurs. Prices are ideally collected from the purchaser. However, in several cases where there is a conventional pricing point already well known for a commodity that price is used; for example, marketing board prices for eggs and milk, and stockyard prices for some livestock. In a few cases, where data for unprocessed materials are not available, prices are taken for a similar commodity at the next stage of processing (e.g. some non-ferrous metals). A detailed description of the characteristics of prices for any commodity is available from Prices Division on request. Prices sought for each month are those in effect on the 15th of the month or the nearest prior business day. In a few cases, prices used are averages for the week which includes the 15th. Prices are reported directly to Statistics Canada or are taken from trade publications or from publications of other government departments.

Weights were derived from the 1976 Input/Output tables which provide values at purchasers prices of commodities purchased as intermediate inputs. These values have been adjusted for price changes between 1976 and 1977.

Indice des prix des matières brutes (1977 = 100)

L'indice des prix des matières brutes mesure la variation des prix des matières brutes qu'achètent les industries canadiennes. Par matières brutes, on entend les marchandises qui sont le fruit de l'étape primaire de la production. Cela englobe, par exemple, le blé (mais non la farine), le minerai de fer (mais non la fonte en gueuses) et le charbon (mais non l'électricité). Les prix d'environ soixante-dix produits, regroupés en huit grandes composantes, sont relevés aux fins de l'indice.

L'indice d'ensemble et ceux des composantes, dont l'année de base est 1977, paraissent tous les mois dans le Quotidien de Statistique Canada, à peu près cinq semaines après la fin du mois de référence. Ils sont offerts simultanément dans la matrice 2892 de CANSIM.

L'indice vise les achats des industries canadiennes, habituellement en vue d'une transformation additionnelle, mais il ne porte pas sur les exportations, ni sur les matières brutes qui passent directement à la demande finale (principalement des denrées alimentaires). Par exemple, les pommes de terre achetées par les entreprises de conditionnement des aliments pour la fabrication de croustilles ou de frites congelées sont prises en compte dans l'indice, mais celles achetées directement par le consommateur ne le sont pas.

Comme il s'agit d'un indice des prix à l'achat, les prix devraient comprendre toutes les dépenses engagées par l'acheteur pour faire parvenir le produit à la porte de son établissement. Ils englobent donc les frais de transport, les taxes et les droits de douane, de même que les effets de toute subvention versée à l'acheteur. On tient compte des importations et des biens produits au pays. À titre d'exemple, les prix du pétrole brut comprennent les frais de pipe-line et les impôts comme la taxe d'indemnisation pétrolière, mais le prix d'achat du pétrole importé traduit également la subvention à l'importation versée aux acheteurs.

Il n'est pas toujours possible de relever les variations de toutes les dépenses engagées par l'acheteur, auprès duquel les prix sont idéalement recueillis. Il peut néanmoins exister des points de relevé bien connus pour un produit donné (offices de commercialisation des oeufs et du lait, parcs à bestiaux, etc.); on préférera dans ces cas recourir aux prix donnés par ces intermédiaires. Lorsqu'il est impossible d'obtenir les renseignements pour une matière non transformée, les prix sont prélevés pour un produit semblable à l'étape suivante de la transformation (c'est le cas notamment de certains métaux non ferreux). La Division des prix fera parvenir sur demande une description détaillée des caractéristiques des prix d'un produit donnée. Les prix recueillis chaque mois sont ceux pratiqués le 15 du mois ou le dernier jour ouvrable qui le précède. Dans certains cas, les prix utilisés représentent la moyenne de la semaine qui englobe le 15. Les prix qui ne sont pas déclarés directement à Statistique Canada sont tirés de revues spécialisées ou des publications d'autres ministères.

Les pondérations sont fondées sur les tableaux des entrées-sorties de 1976, qui donnent les valeurs (prix d'achat) des produits acquis à titre d'entrées intermédiaires. Les valeurs en cause ont été modifiées en fonction de la variation des prix entre 1976 et 1977.

The index is calculated according to the following formula:

L'indice est calculé selon la formule suivante:

$$I_s = \frac{1}{n} \sum P_t / P_{77} \times 100$$

$$I_s = \frac{1}{n} \sum P_t / P_{77} \times 100$$

$$I = \frac{\sum I_s \left(\frac{P_{77}}{P_{76}} \cdot v_{76} \right)}{\left(\frac{P_{77}}{P_{76}} \cdot v_{76} \right)}$$

$$I = \frac{\sum I_s \left(\frac{P_{77}}{P_{76}} \cdot v_{76} \right)}{\left(\frac{P_{77}}{P_{76}} \cdot v_{76} \right)}$$

where

où

I_s = commodity index

I_s = l'indice du produit

P_t = current level of price quote

P_t = le prix actuel du produit, d'après le relevé

P_{77} = average level of price quote in 1977

P_{77} = le prix moyen du produit en 1977

n = number of price quotes for the commodity

n = le nombre de relevés effectués pour le produit

I = major group or total index

I = le groupe ou l'indice d'ensemble

P_{77}/P_{76} = price movement from 1976 to 1977 of commodity

P_{77}/P_{76} = la variation des prix du produit de 1976 à 1977

V_{76} = expenditure in 1976 on commodity.

V_{76} = les dépenses consacrées au produit en 1976.

Individual price quotations are equally weighted within the commodity indexes except in a few instances where data are available to allow prices to be weighted according to their market shares.

En ce qui concerne les indices des produits, les observations individuelles des prix ont toutes la même pondération, sauf lorsque des données connexes permettent de pondérer les prix en fonction des parts du marché.

Index weights for the major groups and their commodity content are presented in the following table:

Le tableau qui suit renferme les pondérations relatives aux groupes et aux produits qui les composent:

Total major groupes	Weights 100%	Commodities within each group
Ensemble des groupes	Pondé- ration 100%	Produits dans chaque groupe
Vegetable products - sub- stances végétales	12	Fresh fruit, wheat, other grains, oil seeds, natural rubber, raw sugar, cocoa, coffee, tea, fresh vegetables, tobacco, hay - Fruits frais, blé, autres céréales, oléagineux, caoutchouc brut, sucre brut, cacao, café, thé, légumes frais, tabac, foin
Animals, and animal prod- ucts - Animaux et sub- stances animales	23	Furs, hides and skins, cattle and calves, sheep And lambs, hogs, poultry, milk, eggs, fish - Fourrures, cuirs et peaux, veaux et bovins, moutons et agneaux, porcs, volaille, lait, oeufs, poisson
Textile - Matière tex- tiles	1	Cotton, wool, man-made fibre - Coton, laine, fibres synthétiques
Wood - Bois	11	Logs, pulpwood - billes, bois à pâte
Ferrous materials - Matières ferreuses	3	Scrap, iron ore - Ferraille, minerai de fer
Non-ferrous metals - Métaux non ferreux	6	Aluminum, copper, lead, nickel, gold, other precious metals, tin, zinc, scrap - Aluminium, cuivre, plomb, nickel, or, autres métaux précieux, étain, zinc, déchets
Non-metallic minerals - Minéraux non métalliques	4	Sulphur, sand and gravel, asbestos, stone, gypsum, potash - Soufre, sable et gravier, amiante, pierre, gypse, potasse
Coal, crude oil, natural gas - Charbon, pétrole brut, gaz naturel	40	Thermal coal, crude oil, natural gas - Charbon thermique, pétrole brut, gaz naturel

Users who wish to comment on the indexes presented here are invited to contact the Goods and Service Producing Industries Prices Section, Prices Division, telephone (613) 995-5761.

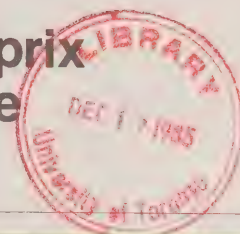

Les utilisateurs qui auraient des observations à faire au sujet de ces indices sont priés d'en faire part à la Section des prix des industries de biens et de services, Division des prix, téléphone (613) 995-5761.

Data in Many Forms...

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer printouts, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

How to Obtain More Information

Inquiries about this publication and related statistics or services should be directed to:

Goods and Services Producing Industries Section,
Prices Division,

Statistics Canada, Ottawa, K1A 0T6 (Telephone: 990-9606/07) or to the Statistics Canada reference centre in:

St. John's	(772-4073)	Sturgeon Falls	(753-4888)
Halifax	(426-5331)	Winnipeg	(949-4020)
Montréal	(283-5725)	Regina	(359-5405)
Ottawa	(990-8116)	Edmonton	(420-3027)
Toronto	(973-6586)	Vancouver	(666-3691)

Toll-free access is provided in all provinces and territories, **for users who reside outside the local dialing area** of any of the regional reference centres.

Des données sous plusieurs formes...

Statistique Canada diffuse les données sous formes diverses. Outre les publications, des totalisations habituelles et spéciales sont offertes sur imprimés d'ordinateur, sur microfiches et microfilms et sur bandes magnétiques. Des cartes et d'autres documents de référence géographiques sont disponibles pour certaines sortes de données. L'accès direct à des données agrégées est possible par le truchement de CANSIM, la base de données ordiolingue et le système d'extraction de Statistique Canada.

Comment obtenir d'autres renseignements

Toutes demandes de renseignements au sujet de cette publication ou de statistiques et services connexes doivent être adressées à:

Section des industries de biens et de services,
Division des prix,

Statistique Canada, Ottawa, K1A 0T6 (téléphone: 990-9606/07) ou au centre de consultation de Statistique Canada à:

St. John's	(772-4073)	Sturgeon Falls	(753-4888)
Halifax	(426-5331)	Winnipeg	(949-4020)
Montréal	(283-5725)	Regina	(359-5405)
Ottawa	(990-8116)	Edmonton	(420-3027)
Toronto	(973-6586)	Vancouver	(666-3691)

Un service d'appel interurbain sans frais est offert, dans toutes les provinces et dans les territoires, aux **utilisateurs qui habitent à l'extérieur des zones de communication locale** des centres régionaux de consultation.

Symbols

The following standard symbols are used in Statistics Canada publications.

- .. figures not available.
- ... figures not appropriate or not applicable.
- nil or zero.
- amount too small to be expressed.
- p preliminary figures.
- r revised figures.
- x confidential to meet secrecy requirements of the Statistics Act.

NOTE

CANSIM® (Canadian Socio-Economic Information Management System) is Statistics Canada's computerized data bank and its supporting software. Most of the data appearing in this publication, as well as many other data series are available from CANSIM via terminal, on computer printouts, or in machine readable form. Historical and more timely data which is not included in this publication are available from CANSIM.

Table 1 (i.e., Industry Selling Price Indexes by Major Groups, Industries and Selected Commodities) includes the identification codes required to order series from CANSIM. For example, to obtain the Industry Selling Price Index: Manufacturing, the code used is D 500000.

For further information write to CANSIM Division, Statistics Canada, Ottawa, K1A 0T6 or call (613) 990-8200.

®Registered Trade Mark of Statistics Canada.

Revisions

Unless otherwise stated, price indexes in this publication are subject to revision for the most recent six months shown. Any revisions beyond these limits are so indicated.

Signes conventionnels

Les signes conventionnels suivants sont employés uniformément dans les publications de Statistique Canada.

- .. nombres indisponibles.
- ... n'ayant pas lieu de figurer.
- néant ou zéro.
- nombres infimes.
- p nombres provisoires.
- r nombres rectifiés.
- x confidentiel en vertu des dispositions de la Loi sur la statistique relatives au secret.

NOTA

Le CANSIM® (Système canadien d'information socio-économique) est le système de Statistique Canada qui se compose d'une banque de données informatisée et de son logiciel de soutien. La plupart des données présentées dans cette publication et beaucoup d'autres données contenues dans le CANSIM peuvent être extraites par l'intermédiaire d'un terminal, sous forme d'imprimés d'ordinateur ou sous forme lisible par machine. Des données historiques et des données plus actuelles qui n'apparaissent pas dans cette publication sont disponibles de CANSIM.

Le tableau 1 (Indice des prix de vente dans l'industrie par groupes, industries et par certains produits) contient les numéros d'identification qui servent à l'extraction des données de CANSIM. Par exemple, pour obtenir l'Indice de prix de vente dans l'industrie: industries manufacturières, le numéros d'identification est D 500000.

Pour plus de renseignements, écrivez à la Division CANSIM, Statistique Canada, Ottawa, K1A 0T6, ou téléphonez à (613) 990-8200.

®Marque déposée de Statistique Canada.

Révisions

Sauf avis contraire, les indices de prix contenus dans la présente publication sont susceptibles d'être révisés pour les six derniers mois indiqués. Toute révision portant sur une plus longue période est indiquée.

This publication was prepared under the direction of:

Barbara J. Slater, Director, Prices Division

Constance M. Jones, Assistant Director

Robin Lowe, Chief, Goods & Services Producing Industries Section

Note to Users: MAJOR REVISION

As was first stated in an insert in the December 1984 issue of this publication, series on a 1971 time base will be terminated with the release of December 1985 indexes. The January 1986 issue, and all subsequent issues, will include indexes on a 1981 time base.

At this time we expect to meet regular production targets, so that January 1986 indexes will be first published at the end of February. A reference paper, Industrial Product Price Indexes, 1981=100, Concepts and Methods (Cat. 62-556), describing also the organisation of the indexes, will be published simultaneously. Any delay in publication of the new series will be announced in the Daily Bulletin, and in this publication.

The information on the following tables is designed to assist users of existing series who wish to maintain continuity of price movement in the simplest manner possible. Users should note three points in particular. (1) The successor indexes on the 1981 time base, which are identified here, are the closest in coverage to their 1971-based predecessors. A key has been provided which gives some guidance to the similarity of the coverage of the two series. However, if the originally chosen series did not perfectly match a user's needs a better alternative series may now be available. A list of all new 1981 based indexes to be published is available on request. (2) Link factors, which will be published in 62-011 for all pairs of series shown here, will be based on the first published December 1985 figures. They will not be revised, and the 1971 based series will not be revised after the first publication of December 1985 figures. Users who are accustomed to incorporating revisions to series may wish to switch from the 71-based series to an 81-based series at an earlier date where the series have gone through the regular number of revision cycles. June 1985 is the last possible date to do this. (3) As will be seen from the tables, it has not always been possible to indicate a successor index; or the indicated index, while identified, may not match the existing series very well. If any of these points apply, or for any other clarification or explanation, users are asked to contact Prices Division Statistics Canada, Ottawa, K1A 0T6 by letter or by telephone (613-990-9611).

Avertissement: RÉVISION MAJEURE

Comme l'indiquait un feuillet intercalaire dans le numéro de décembre 1984 de la présente publication, la diffusion des indices de décembre 1985 marquera la fin des séries reposant sur la base temporelle de 1971. Le numéro de janvier 1986, ainsi que les numéros ultérieurs, renfermera des indices sur la base temporelle de 1981.

À l'heure actuelle, nous prévoyons respecter les échéanciers de la production courante. Les indices de janvier 1986 devraient donc paraître à la fin de février. En outre, un document de référence, intitulé Indices des prix des produits industriels, 1981=100, concepts et méthodes (numéro 62-556 au Catalogue), qui porte sur l'organisation des indices sera publié en même temps. Tout retard de publication des nouvelles séries sera annoncé dans Le Quotidien et dans cette publication.

Les renseignements portant sur les tableaux qui suivent permettront aux utilisateurs des séries existantes d'assurer, de la façon la plus simple possible, la continuité des mouvements de prix. Trois points principaux sont à noter: 1) Les nouveaux indices sur la base de 1981 qui sont utilisés ici sont ceux qui, du point de vue de la couverture, se rapprochent le plus des indices sur la base de 1971. Les utilisateurs trouveront une échelle leur permettant d'évaluer la similarité de la couverture des deux séries. Cependant, si à l'origine la série choisie ne répondait pas parfaitement aux besoins d'un utilisateur, il se peut maintenant qu'une autre série plus appropriée soit disponible. On peut obtenir sur demande une liste de tous les indices sur la base de 1981 qui seront publiés. 2) Les coefficients de raccordement, qui seront publiés dans la publication 62-011 pour toutes les paires de séries qui figurent dans le présent feuillet, reposeront sur les chiffres préliminaires de décembre 1985. Ils ne feront pas l'objet d'une révision. Après la première publication des chiffres de décembre 1985, les séries sur la base de 1971 ne seront pas révisées non plus. Il se peut que les utilisateurs qui ont l'habitude d'intégrer les chiffres révisés aux séries veuillent passer plus tôt des séries sur la base de 1971 à celles sur la base de 1981, c'est-à-dire au moment où le processus de révision des séries aura été complété. Juin 1985 constitue ainsi la date limite pour opérer un tel changement. 3) Comme on pourra le constater à la lecture des tableaux, il n'a pas toujours été possible de créer un nouvel indice. Il se peut aussi que celui qui est indiqué, même s'il est défini, ne corresponde pas très bien aux séries existantes. Si ces cas se présentent ou si vous avez besoin d'informations supplémentaires ou d'explications, veuillez communiquer, par lettre ou par téléphone, avec la Division des prix Statistique Canada, Ottawa, K1A 0T6 (613-990-9611).

1) Indexes are listed in the order they appear in Industry Price Indexes, catlg. 62-011. - L'ordre de présentation des indices est similaire à celui que l'on retrouve dans l'Indice des Prix de l'Industrie, au catalogue 62-011.

2) CANSIM D Codes for the annual series are 50 thousand higher than the monthly code. - Les codes D de CANSIM pour les séries annuelles sont plus élevés de 50 mille que les codes pour les séries mensuelles.

3) Users are advised to use the CANSIM D numbers as identifiers. For annual averages the same CANSIM D number applies. - Les usagers doivent de préférence utiliser les codes de CANSIM en tant que numéros d'identification. Le même code de CANSIM s'applique pour les moyennes annuelles.

4) The code used takes on the following meaning: - Les codes utilisés prennent la signification suivante:

A) The old index is totally included in the coverage of the new index - L'ancien indice est couvert en totalité par le nouvel indice.

B) The old index is totally included in the coverage of the new index - L'ancien indice est couvert en totalité par le nouvel indice.

C) There is some overlap between the old and new index but neither is totally included in the coverage of the other - L'ancien et le nouvel indice se chevauchent partiellement, toutefois aucun des deux ne couvre l'autre en totalité.

F) There is no single match available - aucun indice correspondant n'est disponible.

5) A number of codes have been combined to describe where the indexes fit in the various classifications. They are not recommended as identifiers. - Un certain nombre de codes furent combinés afin d'indiquer l'endroit où les indices s'insèrent dans les diverses classifications. Ces combinaisons de codes ne peuvent cependant servir à identifier les indices.

6) See catalogue 62-011 for the complete identification number. - Voir le catalogue 62-011 pour plus de détails sur le numéro d'identification.

* This index accounts for less than 50 percent of the new 1981 based index. Users should contact the Prices Division Statistics Canada, Ottawa, K1A 0T6 or telephone 613-990-9611 for more information. - Cet indice représente moins de 50 pourcent du nouvel indice basé sur 1981. Les usagers devraient communiquer avec la Division des prix, Statistique Canada, Ottawa, K1A 0T6 ou téléphoner à 613-990-9611 pour plus d'information.

Purchase Price Indexes of Industrial Materials

Note: Indexes for the most recent six months shown are subject to revision.

Nota: Les indices figurant pour les six mois les plus récents sont sujets à révision.

(1) Gross weighted, including inter-industry shipments. Explanation of methods follows Table 4. — Indice pondéré brut comprenant les livraisons inter-industrielles. L'explication des méthodes est donnée à la suite du tableau 4.

(2) The Petroleum Refineries index (D544001 18-3651) is estimated for the current month. The movement of this index is reflected in Major Group 18 and also in the Industry Selling Price total for Manufacturing. — L'indice des raffineries de pétrole (D544001 18-3651) pour le mois courant a été estimé. Le mouvement de cet indice influe sur le groupe 18 de même que sur l'indice total des prix de vente dans l'industrie manufacturière.

(3) Only British Columbia prices for both rough and planed hemlock are included. — Seuls les prix de Colombie-Britannique du pruche à l'état brut et plané sont inclus.

Note: Indexes for the most recent six months shown are subject to revision.

Nota: Les indices figurant pour les six mois les plus récents sont sujets à révision.

(1) Thermal Coal Index for the most recent twelve months is subject to revision. The index for coal is a purchase price index determined by surveying electric utilities. L'indice du charbon thermique pour les 12 mois les plus récents est sujet à révision. L'indice du charbon est un indice du prix d'achat payé par les services publics d'électricité.

(1) Monthly prices are collected and processed three times per annum. The indexes of prior year have a twelve months revision period during the current year. - Des prix mensuels sont relevés et calculés trois fois par année. Les indices de l'année antérieure sont sujets à révision pendant les douze mois de l'année courante.

Note: Indexes subject to revision.
Nota: L'indice est susceptible d'être révisé.

(1) Revised from January 1979 to October 1980 to include costs associated with the Syncrude Levy and pipeline transportation charges on crude oil. — Indice révisé de janvier 1979 à octobre 1980 pour tenir compte du renchérissement du pétrole brut provoqué par la contribution Syncrude et les frais du transport par pipe-line.

(2) Previously this group was called "Fuels". — Ce groupe s'appelait auparavant "Combustibles".

EXPLANATION OF METHODS USED AND ADDITIONAL SOURCES FOR INDUSTRIAL PRICE INDEXES

Industry Selling Price Indexes (1971 = 100)

Industry Selling Price Indexes are published for approximately 110 industries within manufacturing. Also published are approximately 700 commodity price indexes for the products of these industries. The Classification system is that of the 1970 Standard Industrial Classification, thus permitting the joint use of price statistics with other data such as production and employment similarly classified.

The data upon which both the initial selection of commodities to be priced and responding firms are made, are contained in the census of Manufacturers, a series of annual surveys collecting statistics on shipments of commodities, employment and materials used. Prices are collected for new orders placed on the 15th of each month or the nearest transaction date for the commodity being priced; sales and excise taxes are excluded.

The indexes are gross weighted. They measure the movements of prices of gross shipments of manufacturing industries, including inter-industry shipments between individual industries within manufacturing. Therefore, they duplicate the movements of some prices in the sense that, for example, flour prices are given full weight as part of the shipments of the Flour Mills Industry and then are implicitly counted again through full weighting of the shipment prices of those manufacturing industries which use flour as an ingredient in their outputs, e.g., bread, biscuits, cakes, etc.

The industry classified price indexes are useful for analysis of price movements, for estimation of the constant dollar value of shipments, and for purposes of contract escalations.

A complete description of these indexes is contained in: *Industry Selling Price Indexes: Manufacturing, 1956-1976*, Catalogue 62-543 for the 1971 = 100 based indexes.

Petroleum Refineries Price Index

A revised price sample has been linked into the Petroleum Refineries Price Indexes of the Industry Selling Price Indexes (Table 1), effective February 1977 wherein the number of prices observed and collected has been increased ninefold. The prices for these commodities are the average net realized prices by oil companies for finely specified categories of sale.

The weights assigned to all user categories in the new series correspond to net sales made in 1971 by the respective company in any given region. Each weight represents the importance of the respective user cate-

EXPLICATION DES MÉTHODES UTILISÉES ET SOURCES SUPPLÉMENTAIRES DES PRIX INDUSTRIELS

Indices des prix de vente dans l'industrie (1971 = 100)

Les indices des prix de vente dans l'industrie sont publiés pour environ 110 industries manufacturières. Près de 700 indices des prix des produits de ces industries sont également publiés. Les produits sont classés d'après la Classification des activités économiques de 1970, ce qui permet d'utiliser la statistique des prix avec d'autres données telles que la production et l'emploi classées de la même manière.

Les données sur lesquelles se fonde le choix initial des produits dont il faut déterminer le prix et des établissements enquêtés figurent dans le "recensement des manufactures", série de bulletins sur les enquêtes annuelles au cours desquelles ont recueilli des statistiques sur les expéditions de produits, l'emploi et les matières utilisées. La collecte des prix a lieu le 15 de chaque mois ou à la date de transaction la plus rapprochée pour le produit en question; les taxes de vente et droits d'accise ne sont pas pris en compte.

Il s'agit d'indices pondérés bruts. Ils mesurent les mouvements du prix des livraisons brutes des industries manufacturières, y compris les livraisons interindustrielles des industries manufacturières. Ils prennent donc deux fois en compte les mouvements de certains prix; les prix de la farine, par exemple, font l'objet d'une pondération complète comme ayant trait aux livraisons des meuneries et ils sont comptés à nouveau implicitement du fait de la pondération complète des prix de livraisons des industries manufacturières qui utilisent de la farine comme ingrédient dans leurs produits tels que le pain, les biscuits ou les gâteaux.

Les indices des prix classés par industrie servent à analyser les mouvements de prix, à estimer la valeur des expéditions en dollars constants et à indexer les contrats.

La description complète de ces indices figure dans l'industrie: *Industries manufacturières, 1956-1976*, n° 62-543 au catalogue pour les indices basés sur l'année repère 1971 = 100.

Indice des prix concernant les raffineries de pétrole

Les indices de prix concernant les raffineries de pétrole et faisant partie des indices des prix de vente dans l'industrie (tableau 1) sont fondés sur un nouvel échantillon des prix, à partir de février 1977; dès lors, le nombre de prix observés et recueillis a été multiplié par neuf. Le prix des produits du pétrole est la moyenne des prix nets réels que les sociétés pétrolières exigent pour des catégories bien précises de produits vendus.

Les pondérations attribuées à toutes les catégories d'utilisateurs dans la nouvelle série correspondent aux ventes nettes effectuées en 1971 par la société en question dans une région donnée. Chaque pondération représente l'importance de la

gory in the Petroleum Refinery Index PRI) commodity listing, and determines the degree of influence which each price change has on the total index.

The index movement derived from the new sample was linked into the historical series at January 1977 and the procedure is described algebraically below:

$$P_{t/71}^{\text{Pub.}} = P_{t/\text{Jan. } 77}^{\text{New}} \times P_{\text{Jan. } 77/71}^{\text{Old}}$$

where

$P_{t/71}^{\text{Pub.}}$ is the published index for a period subsequent to January 1977 which has been derived from multiplying the January 1977 level of the old index by the price movement derived from the new price sample;

$P_{t/\text{Jan. } 77}^{\text{New}}$ is the expression for the most recent index derived from the weights and price indexes of the new sample with a reference of January 1977;

$P_{\text{Jan. } 77/71}^{\text{Old}}$ is the expression for the last published index of January 1977 wherein the old weights and price sample were utilized.

catégorie respective d'utilisateur figurant dans la liste des produits pétroliers pris en compte par les indices de prix et détermine l'influence que chaque changement de prix exerce sur l'indice global.

Les variations de l'indice calculées à partir du nouvel échantillon ont été raccordées à la série historique en janvier 1977; le procédé s'exprime ainsi de manière algébrique:

$$P_{t/71}^{\text{publ.}} = P_{t/\text{janv. } 77}^{\text{nouv.}} \times P_{\text{janv. } 77/71}^{\text{anc.}}$$

où

$P_{t/71}^{\text{publ.}}$ est l'indice publié pour une période ultérieure à janvier 1977, calculé en multipliant le chiffre de l'ancien indice en janvier 1977 par la variation de prix mesurée à partir du nouvel échantillon;

$P_{t/\text{janv. } 77}^{\text{nouv.}}$ est l'indice le plus récent calculé avec les pondérations et les indices de prix du nouvel échantillon en prenant janvier 1977 comme période de référence;

$P_{\text{janv. } 77/71}^{\text{anc.}}$ est le dernier indice publié de janvier 1977 faisant appel aux anciennes pondérations et à l'ancien échantillon de prix.

Purchase Price Indexes of Industrial Materials

Secondary Metals (1971 = 100)

Ferrous and non-ferrous indexes are compiled from a series of input prices, inclusive of transportation and brokerage fees, submitted by a wide variety of purchasers from selected industries. Indexes for certain categories of metals cannot be published because of the confidentiality of the data under the Statistics Act.

Steel Foundry Input Index (1971 = 100)

Input price indexes for Steel Foundries (SIC 2910) are calculated using prices covering approximately 80% of total material inputs to the industry. The index for foundry inputs is determined using purchase prices gathered from establishments currently classified to the Iron and Steel Mills industry. These prices are inclusive of all costs incurred by the purchaser to bring the goods to his factory gate (freight, taxes). The weights in this index are derived from 1974 purchases as supplied by the Steel Castings Institute of Canada.

The Steel Foundry Input Index is calculated using the same formula as is described in the description of the Thermal Coal Index. Indexes are available from 1974 onwards, weights are available on request.

Indices du prix d'achat des matériaux industriels

Métaux secondaires (1971=100)

L'indice des métaux ferreux et non ferreux est établi à partir d'une série de prix comprenant les frais de transport et de dédouanement; ces données sont fournies par un large éventail de clients de certaines industries. Confidentiels en vertu de la Loi sur la Statistique, les indices de certaines catégories de métaux ne peuvent être publiés.

Indice des prix des entrées dans les fonderies d'acier (1971 = 100)

L'indice des prix des entrées dans les fonderies d'acier (CAÉ 2910) est calculé à l'aide des prix d'environ 80% des entrées de matières dans cette industrie. Cet indice est établi à partir des prix d'achat déclarés par les établissements classés à l'industrie des fonderies d'acier. Ces prix comprennent toutes les dépenses engagées par l'acheteur pour faire parvenir les produits à la porte de son usine (frais de transport, taxes, etc). Les coefficients de pondération de cet indice sont calculés à partir des achats pour 1974 fournis par le **Steel Castings Institute of Canada**.

L'indice des prix des entrées dans les fonderies d'acier est établi à l'aide de la même équation que l'indice du prix d'achat du charbon thermique. L'indice remonte jusqu'en 1974; les coefficients de pondération sont disponibles sur demande.

Thermal Coal Purchase Price Index (1971 = 100)

This index on a 1971 = 100 base is the result of a renewed demand for coal because of an anticipated shortage in energy supplies. The index for coal is a purchase price index determined by surveying electric utilities, the major users of bituminous coal. It includes purchase prices for both domestic and imported United States coal. Prices are the amount the utilities pay to suppliers, including federal and provincial taxes and freight rates. The weights in this index are derived from the base year purchase prices provided by the firms.

The "Thermal Coal Purchase Price Index" is calculated using the modified Laspyres' fixed weight formula:

$$P_{t/o} = \frac{\sum \frac{P_t}{P_o} V_o}{\sum V_o} \times 100$$

where

$P_{t/o}$ is the price index (expressed as a percentage) which compares prices of the given year t with those of the base year o (1971),

Σ is the sign indicating the summation over all items contained in the index,

P_t is the price of a particular item in the given period t,

P_o is the price of a particular item in the base year o,

V_o is the weight of each particular item in the base year o. Two sets of weights are used. The first set comprises 1971 quantities from 1971 to 1980 inclusive. The second set comprises 1980 quantities starting in January 1981. A link factor has been calculated in December 1980.

$\frac{P_t}{P_o}$ is the price ratio for a particular item (expressed as a percentage) between the given period t and the base year o.

Indexes for establishment and provincial levels cannot be published because of the confidentiality of the data under the Statistics Act.

Indice du prix d'achat du charbon thermique (1971 = 100)

Cet indice de base 1971 = 100 a été établi à la suite d'une nouvelle demande de charbon à cause d'une pénurie prévue en ressources énergétiques. L'indice du charbon est un indice du prix d'achat payé par les services publics d'électricité, principaux utilisateurs de charbon bitumineux. Il comprend à la fois le prix d'achat du charbon domestique et du charbon importé des États-Unis. Les prix sont ceux payés aux fournisseurs, avec les taxes fédérales et provinciales et les taux de fret. Les coefficients de pondération sont calculés à partir du prix d'achat de l'année de base fournis par les entreprises.

L'indice du prix d'achat du charbon thermique est établi à l'aide de l'équation modifiée de Laspyres à pondération fixe:

$$P_{t/o} = \frac{\sum \frac{P_t}{P_o} V_o}{\sum V_o} \times 100$$

où

$P_{t/o}$ est l'indice (exprimé en pourcentage) des prix d'une année t sur ceux de l'année de base o (1971),

Σ est le symbole qui indique la somme de tous les articles de l'indice,

P_t est le prix d'un article particulier pendant la période donnée t,

P_o est le prix d'un article particulier pendant l'année de base o,

V_o est le coefficient de pondération de chaque article particulier pendant l'année de base o. Deux ensembles de coefficients de pondération sont utilisés. Le premier ensemble comprend les quantités de 1971 pour les années de 1971 à 1980 inclusivement. Le second ensemble comprend les quantités de 1980 à partir de janvier 1981. Un facteur de liaison a été calculé en décembre 1980.

$\frac{P_t}{P_o}$ est le rapport (exprimé en pourcentage) du prix d'un article particulier entre la période donnée t et l'année de base o.

Les indices aux niveaux de l'établissement et de la province ne peuvent être publiés puisque la confidentialité des données doit être assurée en vertu de la Loi sur la statistique.

Electric Power Selling Price Indexes (Non-residential)

Brief Description

The Electric Power Selling Price Indexes are designed to measure "pure" price change at the producers' level, i.e., at the "factory gate". Since the industry's transmission lines are considered as part of the producer's operation, the "factory gate" in this index is at the user's end. These indexes are part of a larger system of indexes known as the Industry Selling Price Indexes and conform to the underlying concepts as described in reference document, Catalogue 62-543.

Industry Selling Price Indexes are a measure of pure price change of specified commodities having a fixed time and weight base of 1971-100. Prices are f.o.b. factory gate less discounts and before taxes. The 1971 Gross Shipment Values are gathered by the Census of Manufacturers. In the case of Electric Power Selling Price Indexes, weights are based on the 1971 revenue from electricity sales gathered by Prices Division.

The Electric Power Selling Price Index series is published in two broad customer categories of sales, (1) an index for bills less than 5 000kW and (2) an index for large industrial sales, bills or contracts 5 000 kW and over. Data are presented from 1971 onward, on a monthly basis. Only firm (non-interruptible) power is being surveyed. Interruptible and off-peak power price movement is not included in this index. The survey methodology is described under each of the two broad customer categories.

Whenever specification changes occur thereby altering the quality of the item being priced, quality change evaluations are made to ascertain only pure price change since the commodity characteristics must remain constant in order to measure pure price change over a given period of time, using Laspeyres formula as follows:

$$P_{t/o} = \frac{\sum \frac{P_t}{P_o} V_o}{\sum V_o} \times 100$$

$P_{t/o}$ = index for year t

P_t = price of an item in the given period

P_o = price of an item in year o, the base year

V_o = weight of an item in the base period

P_t/P_o = price ratio for a particular item.

Indices des prix de vente de l'énergie électrique (non résidentielle)

Brève description

Les indices des prix de vente de l'énergie électrique visent à mesurer la variation de prix "pure" au niveau de la production, c'est-à-dire, au "départ de l'usine". Étant donné que les lignes de transport de l'entreprise font ici partie de l'exploitation du producteur, le présent indice prend comme point de "départ de l'usine" l'entrée chez l'utilisateur. Ces indices appartiennent à un plus grand système d'indices appelé Indices de prix de vente dans l'industrie et s'appuient sur les concepts décrits dans le document de référence (n° 62-543 au catalogue).

Les indices de prix de vente dans l'industrie mesurent la variation de prix pure de certains produits ayant une base fixe de période et de pondération (1971-100). Il s'agit des prix f.o.b. départ usine moins les remises et avant impôt. Les valeurs des livraisons brutes sont recueillies par le recensement des manufactures. Dans le cas de l'indice des prix de vente de l'énergie électrique, les pondérations sont basées sur les recettes au titre des ventes de 1971, dont les données ont été recueillies par la Division des prix.

L'indice des prix de vente de l'énergie électrique paraît pour deux grandes catégories de ventes selon le client, à savoir: (1) un indice pour les factures de moins de 5 000 kW et (2) un indice pour les ventes, factures ou contrats industriels de 5 000 kW et plus. Nous publions ces données chaque mois depuis 1971. Seule l'énergie, garantie, non susceptible d'être interrompue fait l'objet du relevé les mouvements de prix de l'énergie susceptible d'être interrompue et de l'énergie des heures creuses n'étant pas compris dans l'indice. Les méthodes d'enquête figurent sous chacune des deux grandes catégories.

Toutes les fois qu'il se produit une variation de la qualité de produit relevé, on procède à une évaluation de la variation de la qualité afin de s'assurer que seule la variation de prix pure est prise en compte, puisque les caractéristiques du produit doivent demeurer constantes si l'on veut mesurer une variation de prix pure sur une période donnée. On se sert de Laspeyres de la façon suivante:

$$P_{t/o} = \frac{\sum \frac{P_t}{P_o} V_o}{\sum V_o} \times 100$$

$P_{t/o}$ = indice pour l'année t

P_t = prix d'un article particulier pendant une période donnée

P_o = prix d'un article particulier pendant l'année o, année de base

V_o = coefficient de pondération d'un article pendant la période de base

P_t/P_o = ratio des prix pour un article particulier.

Methodology

Bills less than 5,000 kW. In this category a "representative bill" was selected subjectively through examination of the bills in each of the municipalities drawn in our provincial samples. Some 120 municipalities were surveyed in the sample and the municipalities selected represent a good coverage of each province in terms of sales. The representative bill was established and its kW demand and kW.h consumption specifications will be held constant until it is found, on periodic review, that the bill is no longer representative of the monthly bills in that municipality. When this occurs a new representative bill will be selected and its price "spliced in" to the original bill to maintain the continuity of the index. Larger municipalities may have more than one representative bill where several significant groupings of bills have been identified. All provinces are included in the survey.

Bills 5,000 kW and over. This customer category presented problems in sampling. The category is composed of customers whose contract prices do not necessarily move as a family of curves. In many cases larger contracts are given a different price adjustment by utilities, than the lesser ones. In order to eliminate this sampling problem, a stratified sampling technique was used whereby homogeneous groups or strata were established and a representative contract was selected subjectively for each interval or stratum, e.g., 5,000-8,000 kW, 8,001-10,000 kW, 10,001-15,000 kW, 15,001-20,000 kW and over 20,000 kW (the specifications used may be theoretical in order to respect the confidentiality of a respondent). Interval boundaries and their representative contracts are held constant through time for each utility. These interval boundaries differ between utilities since each one has a different customer category make-up. The actual index of the "5,000 kW and over" category is a weighted average of the price movements for each interval or stratum within that group. Each interval is weighted according to the utility's revenue from sales for 1971. It is recognized that in the larger utilities the establishment of homogeneous groups of contracts in terms of price movement, especially in the contracts 15,000 kW and over, may not be possible. Consequently, as an alternative, utilities may calculate a weighted average unit price in each of the intervals of strata that are not homogeneous and apply this price movement to a theoretical representative contract. In this way distortions will be minimized and at the total index levels will be averaged out.

Individual indexes are calculated for the province, economic region and at the national level for each of the two broad customer categories described above. The five economic regions are as follows: Pacific (British Columbia), Prairie (Alberta, Saskatchewan and Manitoba), Ontario, Québec and Atlantic (Newfoundland, New Brunswick, Prince Edward Island and Nova Scotia).

Users are cautioned that the indexes indicate only price movement variations and should not be interpreted as representative of individual utilities relative price levels.

Méthodologie

Factures de moins de 5,000 kW. Dans cette catégorie une "facture représentative" a été choisie subjectivement parmi les factures de chacune des municipalités tirées de nos échantillons provinciaux. Les quelque 120 municipalités de l'échantillon sont représentatives des ventes effectuées dans chaque province. À la facture choisie sont attribuées des caractéristiques, c'est-à-dire la demande en kW et la consommation en kW.h, que l'on conserve jusqu'à ce que, après un examen périodique, on estime que la facture ne représente plus le prix mensuel des factures de cette municipalité. Dans ce cas, une nouvelle facture représentative est choisie et son prix est "ajusté" d'après la facture originale pour ne pas créer une discontinuité dans la série. Les grandes municipalités peuvent avoir plus d'une facture représentative lorsque plusieurs groupements de factures ont été établis. Toutes les provinces sont visées par l'enquête.

Factures de 5,000 kW et plus. Cette catégorie de clients présente certains problèmes d'échantillonnage; elle se compose dans son ensemble de clients pour lesquels les mouvements des prix des contrats ne vont pas nécessairement dans le même sens. Dans de nombreux cas, les gros contrats font l'objet d'un rajustement de prix par service, différent de celui des petits contrats. Afin d'éliminer ce problème, on a utilisé une technique d'échantillonnage stratifié pour établir des groupes ou strates homogènes et choisir subjectivement un contrat représentatif (dont les caractéristiques peuvent être "théoriques" de façon à garder secrets les chiffres d'un enquête) pour chaque intervalle ou strate, par ex., 5,000-8,000 kW, 8,001-10,000 kW, 10,001-15,000 kW, 15,001-20,000 kW et plus de 20,000 kW. Ces limites et leurs contrats représentatifs sont tenus constants dans le temps pour chaque service public. Ces limites ne sont pas les mêmes pour chaque service puisque chacun regroupe des clients différents. L'indice réel pour les factures de 5,000 kW et plus est une moyenne pondérée des mouvements de prix pour chaque intervalle ou strate de chaque groupe, chaque intervalle étant pondéré selon les recettes de ce service au titre des ventes de 1971. On sait pertinemment que pour les grands services, l'établissement de groupes de contrats homogènes en termes de mouvement de prix, surtout les contrats de 15,000 kW et plus, peut être impossible; par conséquent, comme solution de rechange, les services peuvent calculer un prix unitaire moyen pondéré pour chaque intervalle ou strate non homogène et appliquer cette variation de prix à un contrat représentatif théorique. De la sorte, les distorsions seront maintenues à un minimum et s'équilibreront aux niveaux de l'indice total.

Chaque indice est calculé selon la province, la région économique et le Canada pour chacune des deux grandes catégories de clients décrites ci-haut. Les cinq régions économiques sont: le Pacifique (Colombie-Britannique), les Prairies (Alberta, Saskatchewan et Manitoba), l'Ontario, le Québec, l'Atlantique (Terre-Neuve, Nouveau-Brunswick, Île-du-Prince-Édouard et Nouvelle-Écosse).

Les utilisateurs sont priés de noter que les indices rendent compte des variations des mouvements des prix seulement et qu'il ne faut pas les considérer comme représentatif des niveaux relatifs des prix des divers services.

Raw Materials Price Index (1977 = 100)

The Raw Materials Price Index measures the price change in the purchase of raw materials by Canadian industry. By the term raw materials is meant those commodities that are the products of the primary stage of production - for example wheat, but not flour, iron ore but not pig iron, and coal but not electricity. Approximately seventy commodities are priced in the index, grouped into eight major components.

The index and the major group indexes, on a 1977 time base, are published monthly in the Daily Bulletin approximately five weeks after the end of the reference month. They are also available at that time on CANSIM in matrix 2892.

The index covers purchases by Canadian industry, generally for further processing, and does not cover exports or flows of raw materials directly to final demand (principally foodstuffs). For example, potatoes bought by food processing manufacturers (for the manufacture of potato chips, or frozen french fries) are included in the index, but those bought by consumers directly are not.

As a purchasers price index, prices should include all charges a purchaser incurs to bring the commodity to his establishment gate. Thus transportation charges, taxes and custom duties are all included. So also are the effects of subsidies, if any are paid to the purchaser. Imports as well as domestically produced goods are included. For example, the pricing of crude oil includes pipe line charges, and levies such as the Petroleum Compensation Charge, but the purchase price of imported oil also reflects the import subsidy paid to purchasers.

In this index it is not always practicable to collect the price changes on all the charges the purchaser incurs. Prices are ideally collected from the purchaser. However, in several cases where there is a conventional pricing point already well known for a commodity that price is used; for example, marketing board prices for eggs and milk, and stockyard prices for some livestock. In a few cases, where data for unprocessed materials are not available, prices are taken for a similar commodity at the next stage of processing (e.g. some non-ferrous metals). A detailed description of the characteristics of prices for any commodity is available from Prices Division on request. Prices sought for each month are those in effect on the 15th of the month or the nearest prior business day. In a few cases, prices used are averages for the week which includes the 15th. Prices are reported directly to Statistics Canada or are taken from trade publications or from publications of other government departments.

Weights were derived from the 1976 Input/Output tables which provide values at purchasers prices of commodities purchased as intermediate inputs. These values have been adjusted for price changes between 1976 and 1977.

Indice des prix des matières brutes (1977 = 100)

L'indice des prix des matières brutes mesure la variation des prix des matières brutes qu'achètent les industries canadiennes. Par matières brutes, on entend les marchandises qui sont le fruit de l'étape primaire de la production. Cela englobe, par exemple, le blé (mais non la farine), le minerai de fer (mais non la fonte en gueuses) et le charbon (mais non l'électricité). Les prix d'environ soixante-dix produits, regroupés en huit grandes composantes, sont relevés aux fins de l'indice.

L'indice d'ensemble et ceux des composantes, dont l'année de base est 1977, paraissent tous les mois dans le Quotidien de Statistique Canada, à peu près cinq semaines après la fin du mois de référence. Ils sont offerts simultanément dans la matrice 2892 de CANSIM.

L'indice vise les achats des industries canadiennes, habituellement en vue d'une transformation additionnelle, mais il ne porte pas sur les exportations, ni sur les matières brutes qui passent directement à la demande finale (principalement des denrées alimentaires). Par exemple, les pommes de terre achetées par les entreprises de conditionnement des aliments pour la fabrication de croustilles ou de frites congelées sont prises en compte dans l'indice, mais celles achetées directement par le consommateur ne le sont pas.

Comme il s'agit d'un indice des prix à l'achat, les prix devraient comprendre toutes les dépenses engagées par l'acheteur pour faire parvenir le produit à la porte de son établissement. Ils englobent donc les frais de transport, les taxes et les droits de douane, de même que les effets de toute subvention versée à l'acheteur. On tient compte des importations et des biens produits au pays. À titre d'exemple, les prix du pétrole brut comprennent les frais de pipe-line et les impôts comme la taxe d'indemnisation pétrolière, mais le prix d'achat du pétrole importé traduit également la subvention à l'importation versée aux acheteurs.

Il n'est pas toujours possible de relever les variations de toutes les dépenses engagées par l'acheteur, auprès duquel les prix sont idéalement recueillis. Il peut néanmoins exister des points de relevé bien connus pour un produit donné (offices de commercialisation des oeufs et du lait, parcs à bestiaux, etc.); on préférera dans ces cas recourir aux prix donnés par ces intermédiaires. Lorsqu'il est impossible d'obtenir les renseignements pour une matière non transformée, les prix sont prélevés pour un produit semblable à l'étape suivante de la transformation (c'est le cas notamment de certains métaux non ferreux). La Division des prix fera parvenir sur demande une description détaillée des caractéristiques des prix d'un produit donnée. Les prix recueillis chaque mois sont ceux pratiqués le 15 du mois ou le dernier jour ouvrable qui le précède. Dans certains cas, les prix utilisés représentent la moyenne de la semaine qui englobe le 15. Les prix qui ne sont pas déclarés directement à Statistique Canada sont tirés de revues spécialisées ou des publications d'autres ministères.

Les pondérations sont fondées sur les tableaux des entrées-sorties de 1976, qui donnent les valeurs (prix d'achat) des produits acquis à titre d'entrées intermédiaires. Les valeurs en cause ont été modifiées en fonction de la variation des prix entre 1976 et 1977.

The index is calculated according to the following formula:

$$I_s = \frac{1}{n} \sum P_t / P_{77} \times 100$$

$$I = \frac{\sum I_s \left(\frac{P_{77}}{P_{76}} \cdot v_{76} \right)}{\left(\frac{P_{77}}{P_{76}} \cdot v_{76} \right)}$$

where

I_s = commodity index

P_t = current level of price quote

P_{77} = average level of price quote in 1977

n = number of price quotes for the commodity

I = major group or total index

P_{77}/P_{76} = price movement from 1976 to 1977 of commodity

V_{76} = expenditure in 1976 on commodity.

Individual price quotations are equally weighted within the commodity indexes except in a few instances where data are available to allow prices to be weighted according to their market shares.

L'indice est calculé selon la formule suivante:

$$I_s = \frac{1}{n} \sum P_t / P_{77} \times 100$$

$$I = \frac{\sum I_s \left(\frac{P_{77}}{P_{76}} \cdot v_{76} \right)}{\left(\frac{P_{77}}{P_{76}} \cdot v_{76} \right)}$$

où

I_s = l'indice du produit

P_t = le prix actuel du produit, d'après le relevé

P_{77} = le prix moyen du produit en 1977

n = le nombre de relevés effectués pour le produit

I = le groupe ou l'indice d'ensemble

P_{77}/P_{76} = la variation des prix du produit de 1976 à 1977

V_{76} = les dépenses consacrées au produit en 1976.

En ce qui concerne les indices des produits, les observations individuelles des prix ont toutes la même pondération, sauf lorsque des données connexes permettent de pondérer les prix en fonction des parts du marché.

Index weights for the major groups and their commodity content are presented in the following table:

Le tableau qui suit renferme les pondérations relatives aux groupes et aux produits qui les composent:

Total major groupes	Weights 100%	Commodities within each group
Ensemble des groupes	Pondération 100%	Produits dans chaque groupe
Vegetable products - substances végétales	12	Fresh fruit, wheat, other grains, oil seeds, natural rubber, raw sugar, cocoa, coffee, tea, fresh vegetables, tobacco, hay - Fruits frais, blé, autres céréales, oléagineux, caoutchouc brut, sucre brut, cacao, café, thé, légumes frais, tabac, foin
Animals, and animal products - Animaux et substances animales	23	Furs, hides and skins, cattle and calves, sheep And lambs, hogs, poultry, milk, eggs, fish - Fourrures, cuirs et peaux, veaux et bovins, moutons et agneaux, porcs, volaille, lait, oeufs, poisson
Textile - Matière textiles	1	Cotton, wool, man-made fibre - Coton, laine, fibres synthétiques
Wood - Bois	11	Logs, pulpwood - billes, bois à pâte
Ferrous materials - Matières ferreuses	3	Scrap, iron ore - Ferraille, minerai de fer
Non-ferrous metals - Métaux non ferreux	6	Aluminum, copper, lead, nickel, gold, other precious metals, tin, zinc, scrap - Aluminium, cuivre, plomb, nickel, or, autres métaux précieux, étain, zinc, déchets
Non-metallic minerals - Minéraux non métalliques	4	Sulphur, sand and gravel, asbestos, stone, gypsum, potash - Soufre, sable et gravier, amiante, pierre, gypse, potasse
Coal, crude oil, natural gas - Charbon, pétrole brut, gaz naturel	40	Thermal coal, crude oil, natural gas - Charbon thermique, pétrole brut, gaz naturel

Users who wish to comment on the indexes presented here are invited to contact the Goods and Service Producing Industries Prices Section, Prices Division, telephone (613) 995-5761.

Les utilisateurs qui auraient des observations à faire au sujet de ces indices sont priés d'en faire part à la Section des prix des industries de biens et de services, Division des prix, téléphone (613) 995-5761.

Data in Many Forms...

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer printouts, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

How to Obtain More Information

Inquiries about this publication and related statistics or services should be directed to:

Goods and Services Producing Industries Section,
Prices Division,

Statistics Canada, Ottawa, K1A 0T6 (Telephone: 990-9606/07) or to the Statistics Canada reference centre in:

St. John's	(772-4073)	Sturgeon Falls	(753-4888)
Halifax	(426-5331)	Winnipeg	(949-4020)
Montréal	(283-5725)	Regina	(359-5405)
Ottawa	(990-8116)	Edmonton	(420-3027)
Toronto	(973-6586)	Vancouver	(666-3691)

Toll-free access is provided in all provinces and territories, **for users who reside outside the local dialing area** of any of the regional reference centres.

Newfoundland and Labrador	Zenith 0-7037
Nova Scotia, New Brunswick and Prince Edward Island	1-800-565-7192
Quebec	1-800-361-2831

Des données sous plusieurs formes...

Statistique Canada diffuse les données sous formes diverses. Outre les publications, des totalisations habituelles et spéciales sont offertes sur imprimés d'ordinateur, sur microfiches et microfilms et sur bandes magnétiques. Des cartes et d'autres documents de référence géographiques sont disponibles pour certaines sortes de données. L'accès direct à des données agrégées est possible par le truchement de CANSIM, la base de données ordiolingue et le système d'extraction de Statistique Canada.

Comment obtenir d'autres renseignements

Toutes demandes de renseignements au sujet de cette publication ou de statistiques et services connexes doivent être adressées à:

Section des industries de biens et de services,
Division des prix,

Statistique Canada, Ottawa, K1A 0T6 (téléphone: 990-9606/07) ou au centre de consultation de Statistique Canada à:

St. John's	(772-4073)	Sturgeon Falls	(753-4888)
Halifax	(426-5331)	Winnipeg	(949-4020)
Montréal	(283-5725)	Regina	(359-5405)
Ottawa	(990-8116)	Edmonton	(420-3027)
Toronto	(973-6586)	Vancouver	(666-3691)

Un service d'appel interurbain sans frais est offert, dans toutes les provinces et dans les territoires, aux **utilisateurs qui habitent à l'extérieur des zones de communication locale** des centres régionaux de consultation.

Symbols

The following standard symbols are used in Statistics Canada publications.

.. figures not available.

... figures not appropriate or not applicable.

- nil or zero.

-- amount too small to be expressed.

p preliminary figures.

r revised figures.

x confidential to meet secrecy requirements of the Statistics Act.

NOTE

CANSIM® (Canadian Socio-Economic Information Management System) is Statistics Canada's computerized data bank and its supporting software. Most of the data appearing in this publication, as well as many other data series are available from CANSIM via terminal, on computer printouts, or in machine readable form. Historical and more timely data which is not included in this publication are available from CANSIM.

Table 1 (i.e., Industry Selling Price Indexes by Major Groups, Industries and Selected Commodities) includes the identification codes required to order series from CANSIM. For example, to obtain the Industry Selling Price Index: Manufacturing, the code used is D 500000.

For further information write to CANSIM Division, Statistics Canada, Ottawa, K1A 0T6 or call (613) 990-8200.

®Registered Trade Mark of Statistics Canada.

Revisions

Unless otherwise stated, price indexes in this publication are subject to revision for the most recent six months shown. Any revisions beyond these limits are so indicated.

Signes conventionnels

Les signes conventionnels suivants sont employés uniformément dans les publications de Statistique Canada.

.. nombres indisponibles.

... n'ayant pas lieu de figurer.

- néant ou zéro.

-- nombres infimes.

p nombres provisoires.

r nombres rectifiés.

x confidentiel en vertu des dispositions de la Loi sur la statistique relatives au secret.

NOTA

Le CANSIM® (Système canadien d'information socio-économique) est le système de Statistique Canada qui se compose d'une banque de données informatisée et de son logiciel de soutien. La plupart des données présentées dans cette publication et beaucoup d'autres données contenues dans le CANSIM peuvent être extraites par l'intermédiaire d'un terminal, sous forme d'imprimés d'ordinateur ou sous forme lisible par machine. Des données historiques et des données plus actuelles qui n'apparaissent pas dans cette publication sont disponibles de CANSIM.

Le tableau 1 (Indice des prix de vente dans l'industrie par groupes, industries et par certains produits) contient les numéros d'identification qui servent à l'extraction des données de CANSIM. Par exemple, pour obtenir l'Indice de prix de vente dans l'industrie: industries manufacturières, le numéros d'identification est D 500000.

Pour plus de renseignements, écrivez à la Division CANSIM, Statistique Canada, Ottawa, K1A 0T6, ou téléphonez à (613) 990-8200.

®Marque déposée de Statistique Canada.

Révisions

Sauf avis contraire, les indices de prix contenus dans la présente publication sont susceptibles d'être révisés pour les six derniers mois indiqués. Toute révision portant sur une plus longue période est indiquée.

- (1) Gross weighted, including inter-industry shipments. Explanation of methods follows Table 4. — Indice pondéré brut comprenant les livraisons inter-industrielles. L'explication des méthodes est donnée à la suite du tableau 4.
- (2) The Petroleum Refineries index (D544001 18-3651) is estimated for the current month. The movement of this index is reflected in Major Group 18 and also in the Industry Selling Price total for Manufacturing. — L'indice des raffineries de pétrole (D544001 18-3651) pour le mois courant a été estimé. Le mouvement de cet indice influe sur le groupe 18 de même que sur l'indice total des prix de vente dans l'industrie manufacturière.
- (3) Only British Columbia prices for both rough and planed hemlock are included. — Seuls les prix de Colombie-Britannique du pruche à l'état brut et plané sont inclus.

(1) Thermal Coal Index for the most recent twelve months is subject to revision. The index for coal is a purchase price index determined by surveying electric utilities. — L'indice du charbon thermique pour les 12 mois les plus récents est sujet à révision. L'indice du charbon est un indice du prix d'achat payé par les services publics d'électricité.

(1) Monthly prices are collected and processed three times per annum. The indexes of prior year have a twelve months revision period during the current year. — Des prix mensuels sont relevés et calculés trois fois par année. Les indices de l'année antérieure sont sujets à révision pendant les douze mois de l'année courante.

- (1) Revised from January 1979 to October 1980 to include costs associated with the Syncrude Levy and pipeline transportation charges on crude oil. Indice révisé de janvier 1979 à octobre 1980 pour tenir compte du renchérissement du pétrole brut provoqué par la contribution Syncrude et les frais du transport par pipe-line.
- (2) Previously this group was called "Fuels". — Ce groupe s'appelait auparavant "Combustibles".

EXPLANATION OF METHODS USED AND ADDITIONAL SOURCES FOR INDUSTRIAL PRICE INDEXES

Industry Selling Price Indexes (1971 = 100)

Industry Selling Price Indexes are published for approximately 110 industries within manufacturing. Also published are approximately 700 commodity price indexes for the products of these industries. The Classification system is that of the 1970 Standard Industrial Classification, thus permitting the joint use of price statistics with other data such as production and employment similarly classified.

The data upon which both the initial selection of commodities to be priced and responding firms are made, are contained in the census of Manufacturers, a series of annual surveys collecting statistics on shipments of commodities, employment and materials used. Prices are collected for new orders placed on the 15th of each month or the nearest transaction date for the commodity being priced; sales and excise taxes are excluded.

The indexes are gross weighted. They measure the movements of prices of gross shipments of manufacturing industries, including inter-industry shipments between individual industries within manufacturing. Therefore, they duplicate the movements of some prices in the sense that, for example, flour prices are given full weight as part of the shipments of the Flour Mills Industry and then are implicitly counted again through full weighting of the shipment prices of those manufacturing industries which use flour as an ingredient in their outputs, e.g., bread, biscuits, cakes, etc.

The industry classified price indexes are useful for analysis of price movements, for estimation of the constant dollar value of shipments, and for purposes of contract escalations.

A complete description of these indexes is contained in: *Industry Selling Price Indexes: Manufacturing, 1956-1976*, Catalogue 62-543 for the 1971 = 100 based indexes.

Petroleum Refineries Price Index

A revised price sample has been linked into the Petroleum Refineries Price Indexes of the Industry Selling Price Indexes (Table 1), effective February 1977 wherein the number of prices observed and collected has been increased ninefold. The prices for these commodities are the average net realized prices by oil companies for finely specified categories of sale.

The weights assigned to all user categories in the new series correspond to net sales made in 1971 by the respective company in any given region. Each weight represents the importance of the respective user cate-

EXPLICATION DES METHODES UTILISEES ET SOURCES SUPPLEMENTAIRES DES PRIX INDUSTRIELS

Indices des prix de vente dans l'industrie (1971 = 100)

Les indices des prix de vente dans l'industrie sont publiés pour environ 110 industries manufacturières. Près de 700 indices des prix des produits de ces industries sont également publiés. Les produits sont classés d'après la Classification des activités économiques de 1970, ce qui permet d'utiliser la statistique des prix avec d'autres données telles que la production et l'emploi classées de la même manière.

Les données sur lesquelles se fonde le choix initial des produits dont il faut déterminer le prix et des établissements enquêtés figurent dans le "recensement des manufactures", série de bulletins sur les enquêtes annuelles au cours desquelles ont recueilli des statistiques sur les expéditions de produits, l'emploi et les matières utilisées. La collecte des prix a lieu le 15 de chaque mois ou à la date de transaction la plus rapprochée pour le produit en question; les taxes de vente et droits d'accise ne sont pas pris en compte.

Il s'agit d'indices pondérés bruts. Ils mesurent les mouvements du prix des livraisons brutes des industries manufacturières, y compris les livraisons interindustrielles des industries manufacturières. Ils prennent donc deux fois en compte les mouvements de certains prix; les prix de la farine, par exemple, font l'objet d'une pondération complète comme ayant trait aux livraisons des meuneries et ils sont comptés à nouveau implicitement du fait de la pondération complète des prix de livraisons des industries manufacturières qui utilisent de la farine comme ingrédient dans leurs produits tels que le pain, les biscuits ou les gâteaux.

Les indices des prix classés par industrie servent à analyser les mouvements de prix, à estimer la valeur des expéditions en dollars constants et à indexer les contrats.

La description complète de ces indices figure dans l'industrie: *Industries manufacturières, 1956-1976*, n° 62-543 au catalogue pour les indices basés sur l'année repère 1971 = 100.

Indice des prix concernant les raffineries de pétrole

Les indices de prix concernant les raffineries de pétrole et faisant partie des indices des prix de vente dans l'industrie (tableau 1) sont fondés sur un nouvel échantillon des prix, à partir de février 1977; dès lors, le nombre de prix observés et recueillis a été multiplié par neuf. Le prix des produits du pétrole est la moyenne des prix nets réels que les sociétés pétrolières exigent pour des catégories bien précises de produits vendus.

Les pondérations attribuées à toutes les catégories d'utilisateurs dans la nouvelle série correspondent aux ventes nettes effectuées en 1971 par la société en question dans une région donnée. Chaque pondération représente l'importance de la

gory in the Petroleum Refinery Index PRI) commodity listing, and determines the degree of influence which each price change has on the total index.

The index movement derived from the new sample was linked into the historical series at January 1977 and the procedure is described algebraically below:

$$P_{t/71}^{\text{Pub.}} = P_{t/\text{Jan. } 77}^{\text{New}} \times P_{\text{Jan. } 77/71}^{\text{Old}}$$

where

$P_{t/71}^{\text{Pub}}$ is the published index for a period subsequent to January 1977 which has been derived from multiplying the January 1977 level of the old index by the price movement derived from the new price sample;

$P_{t/\text{Jan. } 77}^{\text{New}}$ is the expression for the most recent index derived from the weights and price indexes of the new sample with a reference of January 1977;

$P_{\text{Jan. } 77/71}^{\text{Old}}$ is the expression for the last published index of January 1977 wherein the old weights and price sample were utilized.

catégorie respective d'utilisateur figurant dans la liste des produits pétroliers pris en compte par les indices de prix et détermine l'influence que chaque changement de prix exerce sur l'indice global.

Les variations de l'indice calculées à partir du nouvel échantillon ont été raccordées à la série historique en janvier 1977; le procédé s'exprime ainsi de manière algébrique:

$$P_{t/71}^{\text{publ.}} = P_{t/\text{janv. } 77}^{\text{nouv.}} \times P_{\text{janv. } 77/71}^{\text{anc.}}$$

où

$P_{t/71}^{\text{publ.}}$ est l'indice publié pour une période ultérieure à janvier 1977, calculé en multipliant le chiffre de l'ancien indice en janvier 1977 par la variation de prix mesurée à partir du nouvel échantillon;

$P_{t/\text{janv. } 77}^{\text{nouv.}}$ est l'indice le plus récent calculé avec les pondérations et les indices de prix du nouvel échantillon en prenant janvier 1977 comme période de référence;

$P_{\text{janv. } 77/71}^{\text{anc.}}$ est le dernier indice publié de janvier 1977 faisant appel aux anciennes pondérations et à l'ancien échantillon de prix.

Purchase Price Indexes of Industrial Materials

Secondary Metals (1971 = 100)

Ferrous and non-ferrous indexes are compiled from a series of input prices, inclusive of transportation and brokerage fees, submitted by a wide variety of purchasers from selected industries. Indexes for certain categories of metals cannot be published because of the confidentiality of the data under the Statistics Act.

Steel Foundry Input Index (1971 = 100)

Input price indexes for Steel Foundries (SIC 2910) are calculated using prices covering approximately 80% of total material inputs to the industry. The index for foundry inputs is determined using purchase prices gathered from establishments currently classified to the Iron and Steel Mills industry. These prices are inclusive of all costs incurred by the purchaser to bring the goods to his factory gate (freight, taxes). The weights in this index are derived from 1974 purchases as supplied by the Steel Castings Institute of Canada.

The Steel Foundry Input Index is calculated using the same formula as is described in the description of the Thermal Coal Index. Indexes are available from 1974 onwards, weights are available on request.

Indices du prix d'achat des matériaux industriels

Métaux secondaires (1971-100)

L'indice des métaux ferreux et non ferreux est établi à partir d'une série de prix comprenant les frais de transport et de dédouanement; ces données sont fournies par un large éventail de clients de certaines industries. Confidentiels en vertu de la Loi sur la Statistique, les indices de certaines catégories de métaux ne peuvent être publiés.

Indice des prix des entrées dans les fonderies d'acier (1971 = 100)

L'indice des prix des entrées dans les fonderies d'acier (CAÉ 2910) est calculé à l'aide des prix d'environ 80% des entrées de matières dans cette industrie. Cet indice est établi à partir des prix d'achat déclarés par les établissements classés à l'industrie des fonderies d'acier. Ces prix comprennent toutes les dépenses engagées par l'acheteur pour faire parvenir les produits à la porte de son usine (frais de transport, taxes, etc). Les coefficients de pondération de cet indice sont calculés à partir des achats pour 1974 fournis par le **Steel Castings Institute of Canada**.

L'indice des prix des entrées dans les fonderies d'acier est établi à l'aide de la même équation que l'indice du prix d'achat du charbon thermique. L'indice remonte jusqu'en 1974; les coefficients de pondération sont disponibles sur demande.

Thermal Coal Purchase Price Index (1971 = 100)

This index on a 1971 = 100 base is the result of a renewed demand for coal because of an anticipated shortage in energy supplies. The index for coal is a purchase price index determined by surveying electric utilities, the major users of bituminous coal. It includes purchase prices for both domestic and imported United States coal. Prices are the amount the utilities pay to suppliers, including federal and provincial taxes and freight rates. The weights in this index are derived from the base year purchase prices provided by the firms.

The "Thermal Coal Purchase Price Index" is calculated using the modified Laspyres' fixed weight formula:

$$P_{t/o} = \frac{\sum \frac{P_t}{P_o} V_o}{\sum V_o} \times 100$$

where

$P_{t/o}$ is the price index (expressed as a percentage) which compares prices of the given year t with those of the base year o (1971),

Σ is the sign indicating the summation over all items contained in the index,

P_t is the price of a particular item in the given period t,

P_o is the price of a particular item in the base year o,

V_o is the weight of each particular item in the base year o. Two sets of weights are used. The first set comprises 1971 quantities from 1971 to 1980 inclusive. The second set comprises 1980 quantities starting in January 1981. A link factor has been calculated in December 1980.

$\frac{P_t}{P_o}$ is the price ratio for a particular item (expressed as a percentage) between the given period t and the base year o.

Indexes for establishment and provincial levels cannot be published because of the confidentiality of the data under the Statistics Act.

Indice du prix d'achat du charbon thermique (1971 = 100)

Cet indice de base 1971 = 100 a été établi à la suite d'une nouvelle demande de charbon à cause d'une pénurie prévue en ressources énergétiques. L'indice du charbon est un indice du prix d'achat payé par les services publics d'électricité, principaux utilisateurs de charbon bitumineux. Il comprend à la fois le prix d'achat du charbon domestique et du charbon importé des États-Unis. Les prix sont ceux payés aux fournisseurs, avec les taxes fédérales et provinciales et les taux de fret. Les coefficients de pondération sont calculés à partir du prix d'achat de l'année de base fournis par les entreprises.

L'indice du prix d'achat du charbon thermique est établi à l'aide de l'équation modifiée de Laspyres à pondération fixe:

$$P_{t/o} = \frac{\sum \frac{P_t}{P_o} V_o}{\sum V_o} \times 100$$

où

$P_{t/o}$ est l'indice (exprimé en pourcentage) des prix d'une année t sur ceux de l'année de base o (1971),

Σ est le symbole qui indique la somme de tous les articles de l'indice,

P_t est le prix d'un article particulier pendant la période donnée t,

P_o est le prix d'un article particulier pendant l'année de base o,

V_o est le coefficient de pondération de chaque article particulier pendant l'année de base o. Deux ensembles de coefficients de pondération sont utilisés. Le premier ensemble comprend les quantités de 1971 pour les années de 1971 à 1980 inclusivement. Le second ensemble comprend les quantités de 1980 à partir de janvier 1981. Un facteur de liaison a été calculé en décembre 1980.

$\frac{P_t}{P_o}$ est le rapport (exprimé en pourcentage) du prix d'un article particulier entre la période donnée t et l'année de base o.

Les indices aux niveaux de l'établissement et de la province ne peuvent être publiés puisque la confidentialité des données doit être assurée en vertu de la Loi sur la statistique.

Electric Power Selling Price Indexes (Non-residential)

Brief Description

The Electric Power Selling Price Indexes are designed to measure "pure" price change at the producers' level, i.e., at the "factory gate". Since the industry's transmission lines are considered as part of the producer's operation, the "factory gate" in this index is at the user's end. These indexes are part of a larger system of indexes known as the Industry Selling Price Indexes and conform to the underlying concepts as described in reference document, Catalogue 62-543.

Industry Selling Price Indexes are a measure of pure price change of specified commodities having a fixed time and weight base of 1971-100. Prices are f.o.b. factory gate less discounts and before taxes. The 1971 Gross Shipment Values are gathered by the Census of Manufacturers. In the case of Electric Power Selling Price Indexes, weights are based on the 1971 revenue from electricity sales gathered by Prices Division.

The Electric Power Selling Price Index series is published in two broad customer categories of sales, (1) and index for bills less than 5 000kW and (2) an index for large industrial sales, bills or contracts 5 000 kW and over. Data are presented from 1971 onward, on a monthly basis. Only firm (non-interruptible) power is being surveyed. Interruptible and off-peak power price movement is not included in this index. The survey methodology is described under each of the two broad customer categories.

Whenever specification changes occur thereby altering the quality of the item being priced, quality change evaluations are made to ascertain only pure price change since the commodity characteristics must remain constant in order to measure pure price change over a given period of time, using Laspeyres formula as follows:

$$P_{t/o} = \frac{\sum \frac{P_t}{P_o} V_o}{\sum V_o} \times 100$$

$P_{t/o}$ = index for year t

P_t = price of an item in the given period

P_o = price of an item in year o, the base year

V_o = weight of an item in the base period

P_t/P_o = price ratio for a particular item.

Indices des prix de vente de l'énergie électrique (non résidentielle)

Brève description

Les indices des prix de vente de l'énergie électrique visent à mesurer la variation de prix "pure" au niveau de la production, c'est-à-dire, au "départ de l'usine". Étant donné que les lignes de transport de l'entreprise font ici partie de l'exploitation du producteur, le présent indice prend comme point de "départ de l'usine" l'entrée chez l'utilisateur. Ces indices appartiennent à un plus grand système d'indices appelé Indices de prix de vente dans l'industrie et s'appuient sur les concepts décrits dans le document de référence (n° 62-543 au catalogue).

Les indices de prix de vente dans l'industrie mesurent la variation de prix pure de certains produits ayant une base fixe de période et de pondération (1971-100). Il s'agit des prix f.o.b. départ usine moins les remises et avant impôt. Les valeurs des livraisons brutes sont recueillies par le recensement des manufactures. Dans le cas de l'indice des prix de vente de l'énergie électrique, les pondérations sont basées sur les recettes au titre des ventes de 1971, dont les données ont été recueillies par la Division des prix.

L'indice des prix de vente de l'énergie électrique paraît pour deux grandes catégories de ventes selon le client, à savoir: (1) un indice pour les factures de moins de 5 000 kW et (2) un indice pour les ventes, factures ou contrats industriels de 5 000 kW et plus. Nous publions ces données chaque mois depuis 1971. Seule l'énergie, garantie, non susceptible d'être interrompue fait l'objet du relevé les mouvements de prix de l'énergie susceptible d'être interrompue et de l'énergie des heures creuses n'étant pas compris dans l'indice. Les méthodes d'enquête figurent sous chacune des deux grandes catégories.

Toutes les fois qu'il se produit une variation de la qualité de produit relevé, on procède à une évaluation de la variation de la qualité afin de s'assurer que seule la variation de prix pure est prise en compte, puisque les caractéristiques du produit doivent demeurer constantes si l'on veut mesurer une variation de prix pure sur une période donnée. On se sert de Laspeyres de la façon suivante:

$$P_{t/o} = \frac{\sum \frac{P_t}{P_o} V_o}{\sum V_o} \times 100$$

$P_{t/o}$ = indice pour l'année t

P_t = prix d'un article particulier pendant une période donnée

P_o = prix d'un article particulier pendant l'année o, année de base

V_o = coefficient de pondération d'un article pendant la période de base

P_t/P_o = ratio des prix pour un article particulier.

Methodology

Bills less than 5,000 kW. In this category a "representative bill" was selected subjectively through examination of the bills in each of the municipalities drawn in our provincial samples. Some 120 municipalities were surveyed in the sample and the municipalities selected represent a good coverage of each province in terms of sales. The representative bill was established and its kW demand and kW.h consumption specifications will be held constant until it is found, on periodic review, that the bill is no longer representative of the monthly bills in that municipality. When this occurs a new representative bill will be selected and its price "spliced in" to the original bill to maintain the continuity of the index. Larger municipalities may have more than one representative bill where several significant groupings of bills have been identified. All provinces are included in the survey.

Bills 5,000 kW and over. This customer category presented problems in sampling. The category is composed of customers whose contract prices do not necessarily move as a family of curves. In many cases larger contracts are given a different price adjustment by utilities, than the lesser ones. In order to eliminate this sampling problem, a stratified sampling technique was used whereby homogeneous groups or strata were established and a representative contract was selected subjectively for each interval or stratum, e.g., 5,000-8,000 kW, 8,001-10,000 kW, 10,001-15,000 kW, 15,001-20,000 kW and over 20,000 kW (the specifications used may be theoretical in order to respect the confidentiality of a respondent). Interval boundaries and their representative contracts are held constant through time for each utility. These interval boundaries differ between utilities since each one has a different customer category make-up. The actual index of the "5,000 kW and over" category is a weighted average of the price movements for each interval or stratum within that group. Each interval is weighted according to the utility's revenue from sales for 1971. It is recognized that in the larger utilities the establishment of homogeneous groups of contracts in terms of price movement, especially in the contracts 15,000 kW and over, may not be possible. Consequently, as an alternative, utilities may calculate a weighted average unit price in each of the intervals of strata that are not homogeneous and apply this price movement to a theoretical representative contract. In this way distortions will be minimized and at the total index levels will be averaged out.

Individual indexes are calculated for the province, economic region and at the national level for each of the two broad customer categories described above. The five economic regions are as follows: Pacific (British Columbia), Prairie (Alberta, Saskatchewan and Manitoba), Ontario, Québec and Atlantic (Newfoundland, New Brunswick, Prince Edward Island and Nova Scotia).

Users are cautioned that the indexes indicate only price movement variations and should not be interpreted as representative of individual utilities relative price levels.

Méthodologie

Factures de moins de 5,000 kW. Dans cette catégorie une "facture représentative" a été choisie subjectivement parmi les factures de chacune des municipalités tirées de nos échantillons provinciaux. Les quelque 120 municipalités de l'échantillon sont représentatives des ventes effectuées dans chaque province. À la facture choisie sont attribuées des caractéristiques, c'est-à-dire la demande en kW et la consommation en kW.h, que l'on conserve jusqu'à ce que, après un examen périodique, on estime que la facture ne représente plus le prix mensuel des factures de cette municipalité. Dans ce cas, une nouvelle facture représentative est choisie et son prix est "ajusté" d'après la facture originale pour ne pas créer une discontinuité dans la série. Les grandes municipalités peuvent avoir plus d'une facture représentative lorsque plusieurs groupements de factures ont été établis. Toutes les provinces sont visées par l'enquête.

Factures de 5,000 kW et plus. Cette catégorie de clients présente certains problèmes d'échantillonnage; elle se compose dans son ensemble de clients pour lesquels les mouvements des prix des contrats ne vont pas nécessairement dans le même sens. Dans de nombreux cas, les gros contrats font l'objet d'un rajustement de prix par service, différent de celui des petits contrats. Afin d'éliminer ce problème, on a utilisé une technique d'échantillonnage stratifié pour établir des groupes ou strates homogènes et choisir subjectivement un contrat représentatif (dont les caractéristiques peuvent être "théoriques" de façon à garder secrets les chiffres d'un enquête) pour chaque intervalle ou strate, par ex., 5,000-8,000 kW, 8,001-10,000 kW, 10,001-15,000 kW, 15,001-20,000 kW et plus de 20,000 kW. Ces limites et leurs contrats représentatifs sont tenus constants dans le temps pour chaque service public. Ces limites ne sont pas les mêmes pour chaque service puisque chacun regroupe des clients différents. L'indice réel pour les factures de 5,000 kW et plus est une moyenne pondérée des mouvements de prix pour chaque intervalle ou strate de chaque groupe, chaque intervalle étant pondéré selon les recettes de ce service au titre des ventes de 1971. On sait pertinemment que pour les grands services, l'établissement de groupes de contrats homogènes en termes de mouvement de prix, surtout les contrats de 15,000 kW et plus, peut être impossible; par conséquent, comme solution de rechange, les services peuvent calculer un prix unitaire moyen pondéré pour chaque intervalle ou strate non homogène et appliquer cette variation de prix à un contrat représentatif théorique. De la sorte, les distorsions seront maintenues à un minimum et s'équilibreront aux niveaux de l'indice total.

Chaque indice est calculé selon la province, la région économique et le Canada pour chacune des deux grandes catégories de clients décrites ci-haut. Les cinq régions économiques sont: le Pacifique (Colombie-Britannique), les Prairies (Alberta, Saskatchewan et Manitoba), l'Ontario, le Québec, l'Atlantique (Terre-Neuve, Nouveau-Brunswick, Île-du-Prince-Édouard et Nouvelle-Écosse).

Les utilisateurs sont priés de noter que les indices rendent compte des variations des mouvements des prix seulement et qu'il ne faut pas les considérer comme représentatif des niveaux relatifs des prix des divers services.

Raw Materials Price Index (1977 = 100)

The Raw Materials Price Index measures the price change in the purchase of raw materials by Canadian industry. By the term raw materials is meant those commodities that are the products of the primary stage of production - for example wheat, but not flour, iron ore but not pig iron, and coal but not electricity. Approximately seventy commodities are priced in the index, grouped into eight major components.

The index and the major group indexes, on a 1977 time base, are published monthly in the Daily Bulletin approximately five weeks after the end of the reference month. They are also available at that time on CANSIM in matrix 2892.

The index covers purchases by Canadian industry, generally for further processing, and does not cover exports or flows of raw materials directly to final demand (principally foodstuffs). For example, potatoes bought by food processing manufacturers (for the manufacture of potato chips, or frozen french fries) are included in the index, but those bought by consumers directly are not.

As a purchasers price index, prices should include all charges a purchaser incurs to bring the commodity to his establishment gate. Thus transportation charges, taxes and custom duties are all included. So also are the effects of subsidies, if any are paid to the purchaser. Imports as well as domestically produced goods are included. For example, the pricing of crude oil includes pipe line charges, and levies such as the Petroleum Compensation Charge, but the purchase price of imported oil also reflects the import subsidy paid to purchasers.

In this index it is not always practicable to collect the price changes on all the charges the purchaser incurs. Prices are ideally collected from the purchaser. However, in several cases where there is a conventional pricing point already well known for a commodity that price is used; for example, marketing board prices for eggs and milk, and stockyard prices for some livestock. In a few cases, where data for unprocessed materials are not available, prices are taken for a similar commodity at the next stage of processing (e.g. some non-ferrous metals). A detailed description of the characteristics of prices for any commodity is available from Prices Division on request. Prices sought for each month are those in effect on the 15th of the month or the nearest prior business day. In a few cases, prices used are averages for the week which includes the 15th. Prices are reported directly to Statistics Canada or are taken from trade publications or from publications of other government departments.

Weights were derived from the 1976 Input/Output tables which provide values at purchasers prices of commodities purchased as intermediate inputs. These values have been adjusted for price changes between 1976 and 1977.

Indice des prix des matières brutes (1977 = 100)

L'indice des prix des matières brutes mesure la variation des prix des matières brutes qu'achètent les industries canadiennes. Par matières brutes, on entend les marchandises qui sont le fruit de l'étape primaire de la production. Cela englobe, par exemple, le blé (mais non la farine), le minerai de fer (mais non la fonte en gueuses) et le charbon (mais non l'électricité). Les prix d'environ soixante-dix produits, regroupés en huit grandes composantes, sont relevés aux fins de l'indice.

L'indice d'ensemble et ceux des composantes, dont l'année de base est 1977, paraissent tous les mois dans le Quotidien de Statistique Canada, à peu près cinq semaines après la fin du mois de référence. Ils sont offerts simultanément dans la matrice 2892 de CANSIM.

L'indice vise les achats des industries canadiennes, habituellement en vue d'une transformation additionnelle, mais il ne porte pas sur les exportations, ni sur les matières brutes qui passent directement à la demande finale (principalement des denrées alimentaires). Par exemple, les pommes de terre achetées par les entreprises de conditionnement des aliments pour la fabrication de croustilles ou de frites congelées sont prises en compte dans l'indice, mais celles achetées directement par le consommateur ne le sont pas.

Comme il s'agit d'un indice des prix à l'achat, les prix devraient comprendre toutes les dépenses engagées par l'acheteur pour faire parvenir le produit à la porte de son établissement. Ils englobent donc les frais de transport, les taxes et les droits de douane, de même que les effets de toute subvention versée à l'acheteur. On tient compte des importations et des biens produits au pays. À titre d'exemple, les prix du pétrole brut comprennent les frais de pipe-line et les impôts comme la taxe d'indemnisation pétrolière, mais le prix d'achat du pétrole importé traduit également la subvention à l'importation versée aux acheteurs.

Il n'est pas toujours possible de relever les variations de toutes les dépenses engagées par l'acheteur, auprès duquel les prix sont idéalement recueillis. Il peut néanmoins exister des points de relevé bien connus pour un produit donné (offices de commercialisation des oeufs et du lait, parcs à bestiaux, etc.); on préférera dans ces cas recourir aux prix donnés par ces intermédiaires. Lorsqu'il est impossible d'obtenir les renseignements pour une matière non transformée, les prix sont prélevés pour un produit semblable à l'étape suivante de la transformation (c'est le cas notamment de certains métaux non ferreux). La Division des prix fera parvenir sur demande une description détaillée des caractéristiques des prix d'un produit donnée. Les prix recueillis chaque mois sont ceux pratiqués le 15 du mois ou le dernier jour ouvrable qui le précède. Dans certains cas, les prix utilisés représentent la moyenne de la semaine qui englobe le 15. Les prix qui ne sont pas déclarés directement à Statistique Canada sont tirés de revues spécialisées ou des publications d'autres ministères.

Les pondérations sont fondées sur les tableaux des entrées-sorties de 1976, qui donnent les valeurs (prix d'achat) des produits acquis à titre d'entrées intermédiaires. Les valeurs en cause ont été modifiées en fonction de la variation des prix entre 1976 et 1977.

The index is calculated according to the following formula:

$$I_s = \frac{1}{n} \sum P_t / P_{77} \times 100$$

$$I = \frac{\sum I_s \left(\frac{P_{77}}{P_{76}} \cdot v_{76} \right)}{\left(\frac{P_{77}}{P_{76}} \cdot v_{76} \right)}$$

where

I_s = commodity index

P_t = current level of price quote

P_{77} = average level of price quote in 1977

n = number of price quotes for the commodity

I = major group or total index

P_{77}/P_{76} = price movement from 1976 to 1977 of commodity

V_{76} = expenditure in 1976 on commodity.

Individual price quotations are equally weighted within the commodity indexes except in a few instances where data are available to allow prices to be weighted according to their market shares.

L'indice est calculé selon la formule suivante:

$$I_s = \frac{1}{n} \sum P_t / P_{77} \times 100$$

$$I = \frac{\sum I_s \left(\frac{P_{77}}{P_{76}} \cdot v_{76} \right)}{\left(\frac{P_{77}}{P_{76}} \cdot v_{76} \right)}$$

où

I_s = l'indice du produit

P_t = le prix actuel du produit, d'après le relevé

P_{77} = le prix moyen du produit en 1977

n = le nombre de relevés effectués pour le produit

I = le groupe ou l'indice d'ensemble

P_{77}/P_{76} = la variation des prix du produit de 1976 à 1977

V_{76} = les dépenses consacrées au produit en 1976.

En ce qui concerne les indices des produits, les observations individuelles des prix ont toutes la même pondération, sauf lorsque des données connexes permettent de pondérer les prix en fonction des parts du marché.

Index weights for the major groups and their commodity content are presented in the following table:

Le tableau qui suit renferme les pondérations relatives aux groupes et aux produits qui les composent:

Total major groupes	Weights 100%	Commodities within each group
Ensemble des groupes	Pondération 100%	Produits dans chaque groupe
Vegetable products - substances végétales	12	Fresh fruit, wheat, other grains, oil seeds, natural rubber, raw sugar, cocoa, coffee, tea, fresh vegetables, tobacco, hay - Fruits frais, blé, autres céréales, oléagineux, caoutchouc brut, sucre brut, cacao, café, thé, légumes frais, tabac, foin
Animals, and animal products - Animaux et substances animales	23	Furs, hides and skins, cattle and calves, sheep and lambs, hogs, poultry, milk, eggs, fish - Fourrures, cuirs et peaux, veaux et bovins, moutons et agneaux, porcs, volaille, lait, oeufs, poisson
Textile - Matière textile	1	Cotton, wool, man-made fibre - Coton, laine, fibres synthétiques
Wood - Bois	11	Logs, pulpwood - billes, bois à pâte
Ferrous materials - Matières ferreuses	3	Scrap, iron ore - Ferraille, minerai de fer
Non-ferrous metals - Métaux non ferreux	6	Aluminum, copper, lead, nickel, gold, other precious metals, tin, zinc, scrap - Aluminium, cuivre, plomb, nickel, or, autres métaux précieux, étain, zinc, déchets
Non-metallic minerals - Minéraux non métalliques	4	Sulphur, sand and gravel, asbestos, stone, gypsum, potash - Soufre, sable et gravier, amiante, pierre, gypse, potasse
Coal, crude oil, natural gas - Charbon, pétrole brut, gaz naturel	40	Thermal coal, crude oil, natural gas - Charbon thermique, pétrole brut, gaz naturel

Users who wish to comment on the indexes presented here are invited to contact the Goods and Service Producing Industries Prices Section, Prices Division, telephone (613) 995-5761.

Les utilisateurs qui auraient des observations à faire au sujet de ces indices sont priés d'en faire part à la Section des prix des industries de biens et de services, Division des prix, téléphone (613) 995-5761.

Data in Many Forms...

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer printouts, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

How to Obtain More Information

Inquiries about this publication and related statistics or services should be directed to:

Goods and Services Producing Industries Section,
Prices Division,

Statistics Canada, Ottawa, K1A 0T6 (Telephone: 990-9606/07) or to the Statistics Canada reference centre in:

St. John's	(772-4073)	Sturgeon Falls	(753-4888)
Halifax	(426-5331)	Winnipeg	(949-4020)
Montréal	(283-5725)	Regina	(359-5405)
Ottawa	(990-8116)	Edmonton	(420-3027)
Toronto	(973-6586)	Vancouver	(666-3691)

Toll-free access is provided in all provinces and territories, **for users who reside outside the local dialing area** of any of the regional reference centres.

Newfoundland and Labrador	Zenith 0-7037
Nova Scotia, New Brunswick and Prince Edward Island	1-800-565-7192

Des données sous plusieurs formes...

Statistique Canada diffuse les données sous formes diverses. Outre les publications, des totalisations habituelles et spéciales sont offertes sur imprimés d'ordinateur, sur microfiches et microfilms et sur bandes magnétiques. Des cartes et d'autres documents de référence géographiques sont disponibles pour certaines sortes de données. L'accès direct à des données agrégées est possible par le truchement de CANSIM, la base de données ordinarlingue et le système d'extraction de Statistique Canada.

Comment obtenir d'autres renseignements

Toutes demandes de renseignements au sujet de cette publication ou de statistiques et services connexes doivent être adressées à:

Section des industries de biens et de services,
Division des prix,

Statistique Canada, Ottawa, K1A 0T6 (téléphone: 990-9606/07) ou au centre de consultation de Statistique Canada à:

St. John's	(772-4073)	Sturgeon Falls	(753-4888)
Halifax	(426-5331)	Winnipeg	(949-4020)
Montréal	(283-5725)	Regina	(359-5405)
Ottawa	(990-8116)	Edmonton	(420-3027)
Toronto	(973-6586)	Vancouver	(666-3691)

Un service d'appel interurbain sans frais est offert, dans toutes les provinces et dans les territoires, aux **utilisateurs qui habitent à l'extérieur des zones de communication locale** des centres régionaux de consultation.

Symbols

The following standard symbols are used in Statistics Canada publications.

.. figures not available.

... figures not appropriate or not applicable.

- nil or zero.

-- amount too small to be expressed.

p preliminary figures.

r revised figures.

x confidential to meet secrecy requirements of the Statistics Act.

NOTE

CANSIM® (Canadian Socio-Economic Information Management System) is Statistics Canada's computerized data bank and its supporting software. Most of the data appearing in this publication, as well as many other data series are available from CANSIM via terminal, on computer printouts, or in machine readable form. Historical and more timely data which is not included in this publication are available from CANSIM.

Table 1 (i.e., Industry Selling Price Indexes by Major Groups, Industries and Selected Commodities) includes the identification codes required to order series from CANSIM. For example, to obtain the Industry Selling Price Index: Manufacturing, the code used is D 500000.

For further information write to CANSIM Division, Statistics Canada, Ottawa, K1A 0T6 or call (613) 990-8200.

®Registered Trade Mark of Statistics Canada.

Revisions

Unless otherwise stated, price indexes in this publication are subject to revision for the most recent six months shown. Any revisions beyond these limits are so indicated.

Signes conventionnels

Les signes conventionnels suivants sont employés uniformément dans les publications de Statistique Canada.

.. nombres indisponibles.

... n'ayant pas lieu de figurer.

- néant ou zéro.

-- nombres infimes.

p nombres provisoires.

r nombres rectifiés.

x confidentiel en vertu des dispositions de la Loi sur la statistique relatives au secret.

NOTA

Le CANSIM® (Système canadien d'information socio-économique) est le système de Statistique Canada qui se compose d'une banque de données informatisée et de son logiciel de soutien. La plupart des données présentées dans cette publication et beaucoup d'autres données contenues dans le CANSIM peuvent être extraites par l'intermédiaire d'un terminal, sous forme d'imprimés d'ordinateur ou sous forme lisible par machine. Des données historiques et des données plus actuelles qui n'apparaissaient pas dans cette publication sont disponibles de CANSIM.

Le tableau 1 (Indice des prix de vente dans l'industrie par groupes, industries et par certains produits) contient les numéros d'identification qui servent à l'extraction des données de CANSIM. Par exemple, pour obtenir l'Indice de prix de vente dans l'industrie: industries manufacturières, le numéros d'identification est D 500000.

Pour plus de renseignements, écrivez à la Division CANSIM, Statistique Canada, Ottawa, K1A 0T6, ou téléphonez à (613) 990-8200.

®Marque déposée de Statistique Canada.

Révisions

Sauf avis contraire, les indices de prix contenus dans la présente publication sont susceptibles d'être révisés pour les six derniers mois indiqués. Toute révision portant sur une plus longue période est indiquée.

Vegetable Products - Substances végétales	115.7	113.7	124.6	1.8	7.1	0.11	- 0.5	12
Animals and Animal Products - Animaux et substances animales	171.7	168.8	170.9	1.7	0.5	0.31	0.1	23
Textile - Matières textiles	144.2	144.1	149.6	0.1	- 3.6	-	-	1
Wood - Bois	160.2	159.7	149.3	0.3	7.3	0.03	0.6	11
Ferrous Materials - Matières ferreuses	149.8	150.2	150.6	- 0.3	0.5	-	-	3
Non-ferrous Metals - Métaux non ferreux	149.4	151.5	160.2	- 1.4	6.7	- 0.06	- 0.3	6
Non-Metallic Minerals - Minéraux non métalliques	207.8	207.8	192.6	-	7.9	-	0.2	4
Coal, Crude Oil, Natural Gas - Charbon, pétrole brut, gaz naturel	310.4	310.0	322.2	0.1	3.7	0.07	2.1	40
Raw Materials Excluding Coals, Crude Oil, Natural Gas Total - Ensemble des matières sans charbon pétrole brut, gaz naturel	156.6	155.2	156.4	0.9	0.1	0.39	-	60

(1) This shows the amount by which the movement of each index would move the total in the absence of any change in the other indexes.

(1) Ce chiffre donne l'ampleur de la variation qu'occasionnerait dans l'indice d'ensemble un mouvement d'un indice donné si tous les autres indices demeuraient inchangés.

(2) These indexes are preliminary.

(2) Ces indices sont provisoires.

TEXT TABLE IV. Raw Materials Price Index (1977 = 100)

(1) Gross weighted, including inter-industry shipments. Explanation of methods follows Table 4. — Indice pondéré brut comprenant les livraisons inter-industrielles. L'explication des méthodes est donnée à la suite du tableau 4.

(2) The Petroleum Refineries index (D544001 18-3651) is estimated for the current month. The movement of this index is reflected in Major Group 18 and also in the Industry Selling Price total for Manufacturing. — L'indice des raffineries de pétrole (D544001 18-3651) pour le mois courant a été estimé. Le mouvement de cet indice influe sur le groupe 18 de même que sur l'indice total des prix de vente dans l'industrie manufacturière.

(3) Only British Columbia prices for both rough and planed hemlock are included. — Seuls les prix de Colombie-Britannique du pruche à l'état brut et plané sont inclus.

TABLE 2. Purchase Price Indexes of Industrial Materials

(1) Thermal Coal Index for the most recent twelve months is subject to revision. The index for coal is a purchase price index determined by surveying electric utilities. L'indice du charbon thermique pour les 12 mois les plus récents est sujet à révision. L'indice du charbon est un indice du prix d'achat payé par les services publics d'électricité.

TABLE 3. Electric Power Selling Price Indexes (Non-residential)(1)

TABLEAU 3. Indices des prix de vente de l'énergie électrique (non-résidentielle)(1)

(1) Monthly prices are collected and processed three times per annum. The indexes of prior year have a twelve months revision period during the current year. — Des prix mensuels sont relevés et calculés trois fois par année. Les indices de l'année antérieure sont sujets à révision pendant les douze mois de l'année courante.

(1) Revised from January 1979 to October 1980 to include costs associated with the Syncrude Levy and pipeline transportation charges on crude oil. — Indice révisé de janvier 1979 à octobre 1980 pour tenir compte du renchérissement du pétrole brut provoqué par la contribution Syncrude et les frais du transport par pipe-line.

(2) Previously this group was called "Fuels". — Ce groupe s'appelait auparavant "Combustibles".

EXPLANATION OF METHODS USED AND ADDITIONAL SOURCES FOR INDUSTRIAL PRICE INDEXES

Industry Selling Price Indexes (1971 = 100)

Industry Selling Price Indexes are published for approximately 110 industries within manufacturing. Also published are approximately 700 commodity price indexes for the products of these industries. The Classification system is that of the 1970 Standard Industrial Classification, thus permitting the joint use of price statistics with other data such as production and employment similarly classified.

The data upon which both the initial selection of commodities to be priced and responding firms are made, are contained in the census of Manufacturers, a series of annual surveys collecting statistics on shipments of commodities, employment and materials used. Prices are collected for new orders placed on the 15th of each month or the nearest transaction date for the commodity being priced; sales and excise taxes are excluded.

The indexes are gross weighted. They measure the movements of prices of gross shipments of manufacturing industries, including inter-industry shipments between individual industries within manufacturing. Therefore, they duplicate the movements of some prices in the sense that, for example, flour prices are given full weight as part of the shipments of the Flour Mills Industry and then are implicitly counted again through full weighting of the shipment prices of those manufacturing industries which use flour as an ingredient in their outputs, e.g., bread, biscuits, cakes, etc.

The industry classified price indexes are useful for analysis of price movements, for estimation of the constant dollar value of shipments, and for purposes of contract escalations.

A complete description of these indexes is contained in: *Industry Selling Price Indexes: Manufacturing, 1956-1976*, Catalogue 62-543 for the 1971 = 100 based indexes.

Petroleum Refineries Price Index

A revised price sample has been linked into the Petroleum Refineries Price Indexes of the Industry Selling Price Indexes (Table 1), effective February 1977 wherein the number of prices observed and collected has been increased ninefold. The prices for these commodities are the average net realized prices by oil companies for finely specified categories of sale.

The weights assigned to all user categories in the new series correspond to net sales made in 1971 by the respective company in any given region. Each weight represents the importance of the respective user cate-

EXPLICATION DES MÉTHODES UTILISÉES ET SOURCES SUPPLÉMENTAIRES DES PRIX INDUSTRIELS

Indices des prix de vente dans l'industrie (1971 = 100)

Les indices des prix de vente dans l'industrie sont publiés pour environ 110 industries manufacturières. Près de 700 indices des prix des produits de ces industries sont également publiés. Les produits sont classés d'après la Classification des activités économiques de 1970, ce qui permet d'utiliser la statistique des prix avec d'autres données telles que la production et l'emploi classées de la même manière.

Les données sur lesquelles se fonde le choix initial des produits dont il faut déterminer le prix et des établissements enquêtés figurent dans le "recensement des manufactures", série de bulletins sur les enquêtes annuelles au cours desquelles ont recueilli des statistiques sur les expéditions de produits, l'emploi et les matières utilisées. La collecte des prix a lieu le 15 de chaque mois ou à la date de transaction la plus rapprochée pour le produit en question; les taxes de vente et droits d'accise ne sont pas pris en compte.

Il s'agit d'indices pondérés bruts. Ils mesurent les mouvements du prix des livraisons brutes des industries manufacturières, y compris les livraisons interindustrielles des industries manufacturières. Ils prennent donc deux fois en compte les mouvements de certains prix; les prix de la farine, par exemple, font l'objet d'une pondération complète comme ayant trait aux livraisons des meuneries et ils sont comptés à nouveau implicitement du fait de la pondération complète des prix de livraisons des industries manufacturières qui utilisent de la farine comme ingrédient dans leurs produits tels que le pain, les biscuits ou les gâteaux.

Les indices des prix classés par industrie servent à analyser les mouvements de prix, à estimer la valeur des expéditions en dollars constants et à indexer les contrats.

La description complète de ces indices figure dans l'industrie: *Industries manufacturières, 1956-1976*, n° 62-543 au catalogue pour les indices basés sur l'année repère 1971 = 100.

Indice des prix concernant les raffineries de pétrole

Les indices de prix concernant les raffineries de pétrole et faisant partie des indices des prix de vente dans l'industrie (tableau 1) sont fondés sur un nouvel échantillon des prix, à partir de février 1977; dès lors, le nombre de prix observés et recueillis a été multiplié par neuf. Le prix des produits du pétrole est la moyenne des prix nets réels que les sociétés pétrolières exigent pour des catégories bien précises de produits vendus.

Les pondérations attribuées à toutes les catégories d'utilisateurs dans la nouvelle série correspondent aux ventes nettes effectuées en 1971 par la société en question dans une région donnée. Chaque pondération représente l'importance de la

gory in the Petroleum Refinery Index (PRI) commodity listing, and determines the degree of influence which each price change has on the total index.

The index movement derived from the new sample was linked into the historical series at January 1977 and the procedure is described algebraically below:

$$P_{t/71}^{Pub.} = P_{t/Jan. 77}^{New} \times P_{Jan. 77/71}^{Old}$$

where

$P_{t/71}^{Pub.}$ is the published index for a period subsequent to January 1977 which has been derived from multiplying the January 1977 level of the old index by the price movement derived from the new price sample;

$P_{t/Jan. 77}^{New}$ is the expression for the most recent index derived from the weights and price indexes of the new sample with a reference of January 1977;

$P_{Jan. 77/71}^{Old}$ is the expression for the last published index of January 1977 wherein the old weights and price sample were utilized.

Purchase Price Indexes of Industrial Materials

Secondary Metals (1971 = 100)

Ferrous and non-ferrous indexes are compiled from a series of input prices, inclusive of transportation and brokerage fees, submitted by a wide variety of purchasers from selected industries. Indexes for certain categories of metals cannot be published because of the confidentiality of the data under the Statistics Act.

Steel Foundry Input Index (1971 = 100)

Input price indexes for Steel Foundries (SIC 2910) are calculated using prices covering approximately 80% of total material inputs to the industry. The index for foundry inputs is determined using purchase prices gathered from establishments currently classified to the Iron and Steel Mills industry. These prices are inclusive of all costs incurred by the purchaser to bring the goods to his factory gate (freight, taxes). The weights in this index are derived from 1974 purchases as supplied by the Steel Castings Institute of Canada.

The Steel Foundry Input Index is calculated using the same formula as is described in the description of the Thermal Coal Index. Indexes are available from 1974 onwards, weights are available on request.

catégorie respective d'utilisateur figurant dans la liste des produits pétroliers pris en compte par les indices de prix et détermine l'influence que chaque changement de prix exerce sur l'indice global.

Les variations de l'indice calculées à partir du nouvel échantillon ont été raccordées à la série historique en janvier 1977; le procédé s'exprime ainsi de manière algébrique:

$$P_{t/71}^{publ.} = P_{t/janv. 77}^{nouv.} \times P_{janv. 77/71}^{anc.}$$

où

$P_{t/71}^{publ.}$ est l'indice publié pour une période ultérieure à janvier 1977, calculé en multipliant le chiffre de l'ancien indice en janvier 1977 par la variation de prix mesurée à partir du nouvel échantillon;

$P_{t/janv. 77}^{nouv.}$ est l'indice le plus récent calculé avec les pondérations et les indices de prix du nouvel échantillon en prenant janvier 1977 comme période de référence;

$P_{janv. 77/71}^{anc.}$ est le dernier indice publié de janvier 1977 faisant appel aux anciennes pondérations et à l'ancien échantillon de prix.

Indices du prix d'achat des matériaux industriels

Métaux secondaires (1971-100)

L'indice des métaux ferreux et non ferreux est établi à partir d'une série de prix comprenant les frais de transport et de dédouanement; ces données sont fournies par un large éventail de clients de certaines industries. Confidentiels en vertu de la Loi sur la Statistique, les indices de certaines catégories de métaux ne peuvent être publiés.

Indice des prix des entrées dans les fonderies d'acier (1971 = 100)

L'indice des prix des entrées dans les fonderies d'acier (CAÉ 2910) est calculé à l'aide des prix d'environ 80% des entrées de matières dans cette industrie. Cet indice est établi à partir des prix d'achat déclarés par les établissements classés à l'industrie des fonderies d'acier. Ces prix comprennent toutes les dépenses engagées par l'acheteur pour faire parvenir les produits à la porte de son usine (frais de transport, taxes, etc). Les coefficients de pondération de cet indice sont calculés à partir des achats pour 1974 fournis par le **Steel Castings Institute of Canada**.

L'indice des prix des entrées dans les fonderies d'acier est établi à l'aide de la même équation que l'indice du prix d'achat du charbon thermique. L'indice remonte jusqu'en 1974; les coefficients de pondération sont disponibles sur demande.

Thermal Coal Purchase Price Index (1971 = 100)

This index on a 1971 = 100 base is the result of a renewed demand for coal because of an anticipated shortage in energy supplies. The index for coal is a purchase price index determined by surveying electric utilities, the major users of bituminous coal. It includes purchase prices for both domestic and imported United States coal. Prices are the amount the utilities pay to suppliers, including federal and provincial taxes and freight rates. The weights in this index are derived from the base year purchase prices provided by the firms.

The "Thermal Coal Purchase Price Index" is calculated using the modified Laspyres' fixed weight formula:

$$P_{t/o} = \frac{\sum \frac{P_t}{P_o} V_o}{\sum V_o} \times 100$$

where

$P_{t/o}$ is the price index (expressed as a percentage) which compares prices of the given year t with those of the base year o (1971),

Σ is the sign indicating the summation over all items contained in the index,

P_t is the price of a particular item in the given period t,

P_o is the price of a particular item in the base year o,

V_o is the weight of each particular item in the base year o. Two sets of weights are used. The first set comprises 1971 quantities from 1971 to 1980 inclusive. The second set comprises 1980 quantities starting in January 1981. A link factor has been calculated in December 1980.

$\frac{P_t}{P_o}$ is the price ratio for a particular item (expressed as a percentage) between the given period t and the base year o.

Indexes for establishment and provincial levels cannot be published because of the confidentiality of the data under the Statistics Act.

Indice du prix d'achat du charbon thermique (1971 = 100)

Cet indice de base 1971 = 100 a été établi à la suite d'une nouvelle demande de charbon à cause d'une pénurie prévue en ressources énergétiques. L'indice du charbon est un indice du prix d'achat payé par les services publics d'électricité, principaux utilisateurs de charbon bitumineux. Il comprend à la fois le prix d'achat du charbon domestique et du charbon importé des États-Unis. Les prix sont ceux payés aux fournisseurs, avec les taxes fédérales et provinciales et les taux de fret. Les coefficients de pondération sont calculés à partir du prix d'achat de l'année de base fournis par les entreprises.

L'indice du prix d'achat du charbon thermique est établi à l'aide de l'équation modifiée de Laspyres à pondération fixe:

$$P_{t/o} = \frac{\sum \frac{P_t}{P_o} V_o}{\sum V_o} \times 100$$

où

$P_{t/o}$ est l'indice (exprimé en pourcentage) des prix d'une année t sur ceux de l'année de base o (1971),

Σ est le symbole qui indique la somme de tous les articles de l'indice,

P_t est le prix d'un article particulier pendant la période donnée t,

P_o est le prix d'un article particulier pendant l'année de base o,

V_o est le coefficient de pondération de chaque article particulier pendant l'année de base o. Deux ensembles de coefficients de pondération sont utilisés. Le premier ensemble comprend les quantités de 1971 pour les années de 1971 à 1980 inclusivement. Le second ensemble comprend les quantités de 1980 à partir de janvier 1981. Un facteur de liaison a été calculé en décembre 1980.

$\frac{P_t}{P_o}$ est le rapport (exprimé en pourcentage) du prix d'un article particulier entre la période donnée t et l'année de base o.

Les indices aux niveaux de l'établissement et de la province ne peuvent être publiés puisque la confidentialité des données doit être assurée en vertu de la Loi sur la statistique.

Electric Power Selling Price Indexes (Non-residential)

Brief Description

The Electric Power Selling Price Indexes are designed to measure "pure" price change at the producers' level, i.e., at the "factory gate". Since the industry's transmission lines are considered as part of the producer's operation, the "factory gate" in this index is at the user's end. These indexes are part of a larger system of indexes known as the Industry Selling Price Indexes and conform to the underlying concepts as described in reference document, Catalogue 62-543.

Industry Selling Price Indexes are a measure of pure price change of specified commodities having a fixed time and weight base of 1971-100. Prices are f.o.b. factory gate less discounts and before taxes. The 1971 Gross Shipment Values are gathered by the Census of Manufacturers. In the case of Electric Power Selling Price Indexes, weights are based on the 1971 revenue from electricity sales gathered by Prices Division.

The Electric Power Selling Price Index series is published in two broad customer categories of sales, (1) and index for bills less than 5 000kW and (2) an index for large industrial sales, bills or contracts 5 000 kW and over. Data are presented from 1971 onward, on a monthly basis. Only firm (non-interruptible) power is being surveyed. Interruptible and off-peak power price movement is not included in this index. The survey methodology is described under each of the two broad customer categories.

Whenever specification changes occur thereby altering the quality of the item being priced, quality change evaluations are made to ascertain only pure price change since the commodity characteristics must remain constant in order to measure pure price change over a given period of time, using Laspeyres formula as follows:

$$P_{t/o} = \frac{\sum \frac{P_t}{P_o} V_o}{\sum V_o} \times 100$$

$P_{t/o}$ = index for year t

P_t = price of an item in the given period

P_o = price of an item in year o, the base year

V_o = weight of an item in the base period

P_t/P_o = price ratio for a particular item.

Indices des prix de vente de l'énergie électrique (non résidentielle)

Brève description

Les indices des prix de vente de l'énergie électrique visent à mesurer la variation de prix "pure" au niveau de la production, c'est-à-dire, au "départ de l'usine". Étant donné que les lignes de transport de l'entreprise font ici partie de l'exploitation du producteur, le présent indice prend comme point de "départ de l'usine" l'entrée chez l'utilisateur. Ces indices appartiennent à un plus grand système d'indices appelé Indices de prix de vente dans l'industrie et s'appuient sur les concepts décrits dans le document de référence (n° 62-543 au catalogue).

Les indices de prix de vente dans l'industrie mesurent la variation de prix pure de certains produits ayant une base fixe de période et de pondération (1971-100). Il s'agit des prix f.o.b. départ usine moins les remises et avant impôt. Les valeurs des livraisons brutes sont recueillies par le recensement des manufactures. Dans le cas de l'indice des prix de vente de l'énergie électrique, les pondérations sont basées sur les recettes au titre des ventes de 1971, dont les données ont été recueillies par la Division des prix.

L'indice des prix de vente de l'énergie électrique paraît pour deux grandes catégories de ventes selon le client, à savoir: (1) un indice pour les factures de moins de 5 000 kW et (2) un indice pour les ventes, factures ou contrats industriels de 5 000 kW et plus. Nous publions ces données chaque mois depuis 1971. Seule l'énergie, garantie, non susceptible d'être interrompue fait l'objet du relevé les mouvements de prix de l'énergie susceptible d'être interrompue et de l'énergie des heures creuses n'étant pas compris dans l'indice. Les méthodes d'enquête figurent sous chacune des deux grandes catégories.

Toutes les fois qu'il se produit une variation de la qualité de produit relevé, on procède à une évaluation de la variation de la qualité afin de s'assurer que seule la variation de prix pure est prise en compte, puisque les caractéristiques du produit doivent demeurer constantes si l'on veut mesurer une variation de prix pure sur une période donnée. On se sert de Laspeyres de la façon suivante:

$$P_{t/o} = \frac{\sum \frac{P_t}{P_o} V_o}{\sum V_o} \times 100$$

$P_{t/o}$ = indice pour l'année t

P_t = prix d'un article particulier pendant une période donnée

P_o = prix d'un article particulier pendant l'année o, année de base

V_o = coefficient de pondération d'un article pendant la période de base

P_t/P_o = ratio des prix pour un article particulier.

Methodology

Bills less than 5,000 kW. In this category a "representative bill" was selected subjectively through examination of the bills in each of the municipalities drawn in our provincial samples. Some 120 municipalities were surveyed in the sample and the municipalities selected represent a good coverage of each province in terms of sales. The representative bill was established and its kW demand and kW.h consumption specifications will be held constant until it is found, on periodic review, that the bill is no longer representative of the monthly bills in that municipality. When this occurs a new representative bill will be selected and its price "spliced in" to the original bill to maintain the continuity of the index. Larger municipalities may have more than one representative bill where several significant groupings of bills have been identified. All provinces are included in the survey.

Bills 5,000 kW and over. This customer category presented problems in sampling. The category is composed of customers whose contract prices do not necessarily move as a family of curves. In many cases larger contracts are given a different price adjustment by utilities, than the lesser ones. In order to eliminate this sampling problem, a stratified sampling technique was used whereby homogeneous groups or strata were established and a representative contract was selected subjectively for each interval or stratum, e.g., 5,000-8,000 kW, 8,001-10,000 kW, 10,001-15,000 kW, 15,001-20,000 kW and over 20,000 kW (the specifications used may be theoretical in order to respect the confidentiality of a respondent). Interval boundaries and their representative contracts are held constant through time for each utility. These interval boundaries differ between utilities since each one has a different customer category make-up. The actual index of the "5,000 kW and over" category is a weighted average of the price movements for each interval or stratum within that group. Each interval is weighted according to the utility's revenue from sales for 1971. It is recognized that in the larger utilities the establishment of homogeneous groups of contracts in terms of price movement, especially in the contracts 15,000 kW and over, may not be possible. Consequently, as an alternative, utilities may calculate a weighted average unit price in each of the intervals of strata that are not homogeneous and apply this price movement to a theoretical representative contract. In this way distortions will be minimized and at the total index levels will be averaged out.

Individual indexes are calculated for the province, economic region and at the national level for each of the two broad customer categories described above. The five economic regions are as follows: Pacific (British Columbia), Prairie (Alberta, Saskatchewan and Manitoba), Ontario, Québec and Atlantic (Newfoundland, New Brunswick, Prince Edward Island and Nova Scotia).

Users are cautioned that the indexes indicate only price movement variations and should not be interpreted as representative of individual utilities relative price levels.

Méthodologie

Factures de moins de 5,000 kW. Dans cette catégorie une "facture représentative" a été choisie subjectivement parmi les factures de chacune des municipalités tirées de nos échantillons provinciaux. Les quelque 120 municipalités de l'échantillon sont représentatives des ventes effectuées dans chaque province. À la facture choisie sont attribuées des caractéristiques, c'est-à-dire la demande en kW et la consommation en kW.h, que l'on conserve jusqu'à ce que, après un examen périodique, on estime que la facture ne représente plus le prix mensuel des factures de cette municipalité. Dans ce cas, une nouvelle facture représentative est choisie et son prix est "ajusté" d'après la facture originale pour ne pas créer une discontinuité dans la série. Les grandes municipalités peuvent avoir plus d'une facture représentative lorsque plusieurs groupements de factures ont été établis. Toutes les provinces sont visées par l'enquête.

Factures de 5,000 kW et plus. Cette catégorie de clients présente certains problèmes d'échantillonnage; elle se compose dans son ensemble de clients pour lesquels les mouvements des prix des contrats ne vont pas nécessairement dans le même sens. Dans de nombreux cas, les gros contrats font l'objet d'un rajustement de prix par service, différent de celui des petits contrats. Afin d'éliminer ce problème, on a utilisé une technique d'échantillonnage stratifié pour établir des groupes ou strates homogènes et choisir subjectivement un contrat représentatif (dont les caractéristiques peuvent être "théoriques" de façon à garder secrets les chiffres d'un enquête) pour chaque intervalle ou strate, par ex., 5,000-8,000 kW, 8,001-10,000 kW, 10,001-15,000 kW, 15,001-20,000 kW et plus de 20,000 kW. Ces limites et leurs contrats représentatifs sont tenus constants dans le temps pour chaque service public. Ces limites ne sont pas les mêmes pour chaque service puisque chacun regroupe des clients différents. L'indice réel pour les factures de 5,000 kW et plus est une moyenne pondérée des mouvements de prix pour chaque intervalle ou strate de chaque groupe, chaque intervalle étant pondéré selon les recettes de ce service au titre des ventes de 1971. On sait pertinemment que pour les grands services, l'établissement de groupes de contrats homogènes en termes de mouvement de prix, surtout les contrats de 15,000 kW et plus, peut être impossible; par conséquent, comme solution de rechange, les services peuvent calculer un prix unitaire moyen pondéré pour chaque intervalle ou strate non homogène et appliquer cette variation de prix à un contrat représentatif théorique. De la sorte, les distorsions seront maintenues à un minimum et s'équilibreront aux niveaux de l'indice total.

Chaque indice est calculé selon la province, la région économique et le Canada pour chacune des deux grandes catégories de clients décrites ci-haut. Les cinq régions économiques sont: le Pacifique (Colombie-Britannique), les Prairies (Alberta, Saskatchewan et Manitoba), l'Ontario, le Québec, l'Atlantique (Terre-Neuve, Nouveau-Brunswick, Île-du-Prince-Édouard et Nouvelle-Écosse).

Les utilisateurs sont priés de noter que les indices rendent compte des variations des mouvements des prix seulement et qu'il ne faut pas les considérer comme représentatif des niveaux relatifs des prix des divers services.

Raw Materials Price Index (1977 = 100)

The Raw Materials Price Index measures the price change in the purchase of raw materials by Canadian industry. By the term raw materials is meant those commodities that are the products of the primary stage of production - for example wheat, but not flour, iron ore but not pig iron, and coal but not electricity. Approximately seventy commodities are priced in the index, grouped into eight major components.

The index and the major group indexes, on a 1977 time base, are published monthly in the Daily Bulletin approximately five weeks after the end of the reference month. They are also available at that time on CANSIM in matrix 2892.

The index covers purchases by Canadian industry, generally for further processing, and does not cover exports or flows of raw materials directly to final demand (principally foodstuffs). For example, potatoes bought by food processing manufacturers (for the manufacture of potato chips, or frozen french fries) are included in the index, but those bought by consumers directly are not.

As a purchasers price index, prices should include all charges a purchaser incurs to bring the commodity to his establishment gate. Thus transportation charges, taxes and custom duties are all included. So also are the effects of subsidies, if any are paid to the purchaser. Imports as well as domestically produced goods are included. For example, the pricing of crude oil includes pipe line charges, and levies such as the Petroleum Compensation Charge, but the purchase price of imported oil also reflects the import subsidy paid to purchasers.

In this index it is not always practicable to collect the price changes on all the charges the purchaser incurs. Prices are ideally collected from the purchaser. However, in several cases where there is a conventional pricing point already well known for a commodity that price is used; for example, marketing board prices for eggs and milk, and stockyard prices for some livestock. In a few cases, where data for unprocessed materials are not available, prices are taken for a similar commodity at the next stage of processing (e.g. some non-ferrous metals). A detailed description of the characteristics of prices for any commodity is available from Prices Division on request. Prices sought for each month are those in effect on the 15th of the month or the nearest prior business day. In a few cases, prices used are averages for the week which includes the 15th. Prices are reported directly to Statistics Canada or are taken from trade publications or from publications of other government departments.

Weights were derived from the 1976 Input/Output tables which provide values at purchasers prices of commodities purchased as intermediate inputs. These values have been adjusted for price changes between 1976 and 1977.

Indice des prix des matières brutes (1977 = 100)

L'indice des prix des matières brutes mesure la variation des prix des matières brutes qu'achètent les industries canadiennes. Par matières brutes, on entend les marchandises qui sont le fruit de l'étape primaire de la production. Cela englobe, par exemple, le blé (mais non la farine), le minerai de fer (mais non la fonte en gueuses) et le charbon (mais non l'électricité). Les prix d'environ soixante-dix produits, regroupés en huit grandes composantes, sont relevés aux fins de l'indice.

L'indice d'ensemble et ceux des composantes, dont l'année de base est 1977, paraissent tous les mois dans le Quotidien de Statistique Canada, à peu près cinq semaines après la fin du mois de référence. Ils sont offerts simultanément dans la matrice 2892 de CANSIM.

L'indice vise les achats des industries canadiennes, habituellement en vue d'une transformation additionnelle, mais il ne porte pas sur les exportations, ni sur les matières brutes qui passent directement à la demande finale (principalement des denrées alimentaires). Par exemple, les pommes de terre achetées par les entreprises de conditionnement des aliments pour la fabrication de croustilles ou de frites congelées sont prises en compte dans l'indice, mais celles achetées directement par le consommateur ne le sont pas.

Comme il s'agit d'un indice des prix à l'achat, les prix devraient comprendre toutes les dépenses engagées par l'acheteur pour faire parvenir le produit à la porte de son établissement. Ils englobent donc les frais de transport, les taxes et les droits de douane, de même que les effets de toute subvention versée à l'acheteur. On tient compte des importations et des biens produits au pays. À titre d'exemple, les prix du pétrole brut comprennent les frais de pipe-line et les impôts comme la taxe d'indemnisation pétrolière, mais le prix d'achat du pétrole importé traduit également la subvention à l'importation versée aux acheteurs.

Il n'est pas toujours possible de relever les variations de toutes les dépenses engagées par l'acheteur, auprès duquel les prix sont idéalement recueillis. Il peut néanmoins exister des points de relevé bien connus pour un produit donné (offices de commercialisation des oeufs et du lait, parcs à bestiaux, etc.); on préférera dans ces cas recourir aux prix donnés par ces intermédiaires. Lorsqu'il est impossible d'obtenir les renseignements pour une matière non transformée, les prix sont prélevés pour un produit semblable à l'étape suivante de la transformation (c'est le cas notamment de certains métaux non ferreux). La Division des prix fera parvenir sur demande une description détaillée des caractéristiques des prix d'un produit donnée. Les prix recueillis chaque mois sont ceux pratiqués le 15 du mois ou le dernier jour ouvrable qui le précède. Dans certains cas, les prix utilisés représentent la moyenne de la semaine qui englobe le 15. Les prix qui ne sont pas déclarés directement à Statistique Canada sont tirés de revues spécialisées ou des publications d'autres ministères.

Les pondérations sont fondées sur les tableaux des entrées-sorties de 1976, qui donnent les valeurs (prix d'achat) des produits acquis à titre d'entrées intermédiaires. Les valeurs en cause ont été modifiées en fonction de la variation des prix entre 1976 et 1977.

The index is calculated according to the following formula:

$$I_s = \frac{1}{n} \sum P_t / P_{77} \times 100$$

$$I = \frac{\sum I_s \left(\frac{P_{77}}{P_{76}} \cdot v_{76} \right)}{\left(\frac{P_{77}}{P_{76}} \cdot v_{76} \right)}$$

where

I_s = commodity index

P_t = current level of price quote

P_{77} = average level of price quote in 1977

n = number of price quotes for the commodity

I = major group or total index

P_{77}/P_{76} = price movement from 1976 to 1977 of commodity

V_{76} = expenditure in 1976 on commodity.

Individual price quotations are equally weighted within the commodity indexes except in a few instances where data are available to allow prices to be weighted according to their market shares.

L'indice est calculé selon la formule suivante:

$$I_s = \frac{1}{n} \sum P_t / P_{77} \times 100$$

$$I = \frac{\sum I_s \left(\frac{P_{77}}{P_{76}} \cdot v_{76} \right)}{\left(\frac{P_{77}}{P_{76}} \cdot v_{76} \right)}$$

où

I_s = l'indice du produit

P_t = le prix actuel du produit, d'après le relevé

P_{77} = le prix moyen du produit en 1977

n = le nombre de relevés effectués pour le produit

I = le groupe ou l'indice d'ensemble

P_{77}/P_{76} = la variation des prix du produit de 1976 à 1977

V_{76} = les dépenses consacrées au produit en 1976.

En ce qui concerne les indices des produits, les observations individuelles des prix ont toutes la même pondération, sauf lorsque des données connexes permettent de pondérer les prix en fonction des parts du marché.

Index weights for the major groups and their commodity content are presented in the following table:

Le tableau qui suit renferme les pondérations relatives aux groupes et aux produits qui les composent:

Total major groupes	Weights 100%	Commodities within each group
Ensemble des groupes	Pondération 100%	Produits dans chaque groupe
Vegetable products - substances végétales	12	Fresh fruit, wheat, other grains, oil seeds, natural rubber, raw sugar, cocoa, coffee, tea, fresh vegetables, tobacco, hay - Fruits frais, blé, autres céréales, oléagineux, caoutchouc brut, sucre brut, cacao, café, thé, légumes frais, tabac, foin
Animals, and animal products - Animaux et substances animales	23	Furs, hides and skins, cattle and calves, sheep And lambs, hogs, poultry, milk, eggs, fish - Fourrures, cuirs et peaux, veaux et bovins, moutons et agneaux, porcs, volaille, lait, oeufs, poisson
Textile - Matière textiles	1	Cotton, wool, man-made fibre - Coton, laine, fibres synthétiques
Wood - Bois	11	Logs, pulpwood - billes, bois à pâte
Ferrous materials - Matières ferreuses	3	Scrap, iron ore - Ferraille, minerai de fer
Non-ferrous metals - Métaux non ferreux	6	Aluminum, copper, lead, nickel, gold, other precious metals, tin, zinc, scrap - Aluminium, cuivre, plomb, nickel, or, autres métaux précieux, étain, zinc, déchets
Non-metallic minerals - Minéraux non métalliques	4	Sulphur, sand and gravel, asbestos, stone, gypsum, potash - Soufre, sable et gravier, amiante, pierre, gypse, potasse
Coal, crude oil, natural gas - Charbon, pétrole brut, gaz naturel	40	Thermal coal, crude oil, natural gas - Charbon thermique, pétrole brut, gaz naturel

Users who wish to comment on the indexes presented here are invited to contact the Goods and Service Producing Industries Prices Section, Prices Division, telephone (613) 995-5761.

Les utilisateurs qui auraient des observations à faire au sujet de ces indices sont priés d'en faire part à la Section des prix des industries de biens et de services, Division des prix, téléphone (613) 995-5761.

Data in Many Forms...

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer printouts, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

How to Obtain More Information

Inquiries about this publication and related statistics or services should be directed to:

Goods and Services Producing Industries Section,
Prices Division,

Statistics Canada, Ottawa, K1A 0T6 (Telephone: 990-9606/07) or to the Statistics Canada reference centre in:

St. John's	(772-4073)	Sturgeon Falls	(753-4888)
Halifax	(426-5331)	Winnipeg	(949-4020)
Montréal	(283-5725)	Regina	(359-5405)
Ottawa	(990-8116)	Edmonton	(420-3027)
Toronto	(973-6586)	Vancouver	(666-3691)

Toll-free access is provided in all provinces and territories, **for users who reside outside the local dialing area** of any of the regional reference centres.

Newfoundland and Labrador	Zenith 0-7037
Nova Scotia, New Brunswick and Prince Edward Island	1-800-565-7192
Quebec	1-800-361-2831
Ontario	1-800-268-1151
Manitoba	1-800-282-8006
Saskatchewan	1(112)800-667-3524
Alberta	1-800-222-6400
British Columbia (South and Central)	112-800-663-1551
Yukon and Northern B.C. (area served by Northwestel Inc.)	Zenith 0-8913
Northwest Territories (area served by Northwestel Inc.)	Call collect 420-2011

How to Order Publications

This and other Statistics Canada publications may be purchased from local authorized agents and other community bookstores, through the local Statistics Canada offices, or by mail order to Publication Sales and Services, Statistics Canada, Ottawa, K1A 0T6.

Des données sous plusieurs formes...

Statistique Canada diffuse les données sous formes diverses. Outre les publications, des totalisations habituelles et spéciales sont offertes sur imprimés d'ordinateur, sur microfiches et microfilms et sur bandes magnétiques. Des cartes et d'autres documents de référence géographiques sont disponibles pour certaines sortes de données. L'accès direct à des données agrégées est possible par le truchement de CANSIM, la base de données ordiolingue et le système d'extraction de Statistique Canada.

Comment obtenir d'autres renseignements

Toutes demandes de renseignements au sujet de cette publication ou de statistiques et services connexes doivent être adressées à:

Section des industries de biens et de services,
Division des prix,

Statistique Canada, Ottawa, K1A 0T6 (téléphone: 990-9606/07) ou au centre de consultation de Statistique Canada à:

St. John's	(772-4073)	Sturgeon Falls	(753-4888)
Halifax	(426-5331)	Winnipeg	(949-4020)
Montréal	(283-5725)	Regina	(359-5405)
Ottawa	(990-8116)	Edmonton	(420-3027)
Toronto	(973-6586)	Vancouver	(666-3691)

Un service d'appel interurbain sans frais est offert, dans toutes les provinces et dans les territoires, aux **utilisateurs qui habitent à l'extérieur des zones de communication locale** des centres régionaux de consultation.

Symbols

The following standard symbols are used in Statistics Canada publications.

.. figures not available.

... figures not appropriate or not applicable.

- nil or zero.

-- amount too small to be expressed.

p preliminary figures.

r revised figures.

x confidential to meet secrecy requirements of the Statistics Act.

NOTE

CANSIM[®] (Canadian Socio-Economic Information Management System) is Statistics Canada's computerized data bank and its supporting software. Most of the data appearing in this publication, as well as many other data series are available from CANSIM via terminal, on computer printouts, or in machine readable form. Historical and more timely data which is not included in this publication are available from CANSIM.

Table 1 (i.e., Industry Selling Price Indexes by Major Groups, Industries and Selected Commodities) includes the identification codes required to order series from CANSIM. For example, to obtain the Industry Selling Price Index: Manufacturing, the code used is D 500000.

For further information write to CANSIM Division, Statistics Canada, Ottawa, K1A 0T6 or call (613) 990-8200.

[®]Registered Trade Mark of Statistics Canada.

Revisions

Unless otherwise stated, price indexes in this publication are subject to revision for the most recent six months shown. Any revisions beyond these limits are so indicated.

Signes conventionnels

Les signes conventionnels suivants sont employés uniformément dans les publications de Statistique Canada.

.. nombres indisponibles.

... n'ayant pas lieu de figurer.

- néant ou zéro.

-- nombres infimes.

p nombres provisoires.

r nombres rectifiés.

x confidentiel en vertu des dispositions de la Loi sur la statistique relatives au secret.

NOTA

Le CANSIM[®] (Système canadien d'information socio-économique) est le système de Statistique Canada qui se compose d'une banque de données informatisée et de son logiciel de soutien. La plupart des données présentées dans cette publication et beaucoup d'autres données contenues dans le CANSIM peuvent être extraites par l'intermédiaire d'un terminal, sous forme d'imprimés d'ordinateur ou sous forme lisible par machine. Des données historiques et des données plus actuelles qui n'apparaissent pas dans cette publication sont disponibles de CANSIM.

Le tableau 1 (Indice des prix de vente dans l'industrie par groupes, industries et par certains produits) contient les numéros d'identification qui servent à l'extraction des données de CANSIM. Par exemple, pour obtenir l'Indice de prix de vente dans l'industrie: industries manufacturières, le numéros d'identification est D 500000.

Pour plus de renseignements, écrivez à la Division CANSIM, Statistique Canada, Ottawa, K1A 0T6, ou téléphonez à (613) 990-8200.

[®]Marque déposée de Statistique Canada.

Révisions

Sauf avis contraire, les indices de prix contenus dans la présente publication sont susceptibles d'être révisés pour les six derniers mois indiqués. Toute révision portant sur une plus longue période est indiquée.

- (1) Gross weighted, including inter-industry shipments. Explanation of methods follows Table 4. — Indice pondéré brut comprenant les livraisons inter-industrielles. L'explication des méthodes est donnée à la suite du tableau 4.
- (2) The Petroleum Refineries index (D544001 18-3651) is estimated for the current month. The movement of this index is reflected in Major Group 18 and also in the Industry Selling Price total for Manufacturing. — L'indice des raffineries de pétrole (D544001 18-3651) pour le mois courant a été estimé. Le mouvement de cet indice influe sur le groupe 18 de même que sur l'indice total des prix de vente dans l'industrie manufacturière.
- (3) Only British Columbia prices for both rough and planed hemlock are included. — Seuls les prix de Colombie-Britannique du pin à l'état brut et plané sont inclus.

- (1) Revised from January 1979 to October 1980 to include costs associated with the Synchronic Levy and pipeline transportation charges on crude oil. — Indice révisé de janvier 1979 à octobre 1980 pour tenir compte du renchérissement du pétrole brut provoqué par la contribution Synchronic et les frais du transport par pipe-line.
- (2) Previously this group was called "Fuels". — Ce groupe s'appelait auparavant "Combustibles".

EXPLANATION OF METHODS USED AND ADDITIONAL SOURCES FOR INDUSTRIAL PRICE INDEXES

Industry Selling Price Indexes (1971 = 100)

Industry Selling Price Indexes are published for approximately 110 industries within manufacturing. Also published are approximately 700 commodity price indexes for the products of these industries. The Classification system is that of the 1970 Standard Industrial Classification, thus permitting the joint use of price statistics with other data such as production and employment similarly classified.

The data upon which both the initial selection of commodities to be priced and responding firms are made, are contained in the census of Manufacturers, a series of annual surveys collecting statistics on shipments of commodities, employment and materials used. Prices are collected for new orders placed on the 15th of each month or the nearest transaction date for the commodity being priced; sales and excise taxes are excluded.

The indexes are gross weighted. They measure the movements of prices of gross shipments of manufacturing industries, including inter-industry shipments between individual industries within manufacturing. Therefore, they duplicate the movements of some prices in the sense that, for example, flour prices are given full weight as part of the shipments of the Flour Mills Industry and then are implicitly counted again through full weighting of the shipment prices of those manufacturing industries which use flour as an ingredient in their outputs, e.g., bread, biscuits, cakes, etc.

The industry classified price indexes are useful for analysis of price movements, for estimation of the constant dollar value of shipments, and for purposes of contract escalations.

A complete description of these indexes is contained in: *Industry Selling Price Indexes: Manufacturing, 1956-1976*, Catalogue 62-543 for the 1971 = 100 based indexes.

Petroleum Refineries Price Index

A revised price sample has been linked into the Petroleum Refineries Price Indexes of the Industry Selling Price Indexes (Table 1), effective February 1977 wherein the number of prices observed and collected has been increased ninefold. The prices for these commodities are the average net realized prices by oil companies for finely specified categories of sale.

The weights assigned to all user categories in the new series correspond to net sales made in 1971 by the respective company in any given region. Each weight represents the importance of the respective user cate-

EXPLICATION DES MÉTHODES UTILISÉES ET SOURCES SUPPLÉMENTAIRES DES PRIX INDUSTRIELS

Indices des prix de vente dans l'industrie (1971 = 100)

Les indices des prix de vente dans l'industrie sont publiés pour environ 110 industries manufacturières. Près de 700 indices des prix des produits de ces industries sont également publiés. Les produits sont classés d'après la Classification des activités économiques de 1970, ce qui permet d'utiliser la statistique des prix avec d'autres données telles que la production et l'emploi classées de la même manière.

Les données sur lesquelles se fonde le choix initial des produits dont il faut déterminer le prix et des établissements enquêtés figurent dans le "recensement des manufactures", série de bulletins sur les enquêtes annuelles au cours desquelles ont recueilli des statistiques sur les expéditions de produits, l'emploi et les matières utilisées. La collecte des prix a lieu le 15 de chaque mois ou à la date de transaction la plus rapprochée pour le produit en question; les taxes de vente et droits d'accise ne sont pas pris en compte.

Il s'agit d'indices pondérés bruts. Ils mesurent les mouvements du prix des livraisons brutes des industries manufacturières, y compris les livraisons interindustrielles des industries manufacturières. Ils prennent donc deux fois en compte les mouvements de certains prix; les prix de la farine, par exemple, font l'objet d'une pondération complète comme ayant trait aux livraisons des meuneries et ils sont comptés à nouveau implicitement du fait de la pondération complète des prix de livraisons des industries manufacturières qui utilisent de la farine comme ingrédient dans leurs produits tels que le pain, les biscuits ou les gâteaux.

Les indices des prix classés par industrie servent à analyser les mouvements de prix, à estimer la valeur des expéditions en dollars constants et à indexer les contrats.

La description complète de ces indices figure dans l'industrie: *Industries manufacturières, 1956-1976*, n° 62-543 au catalogue pour les indices basés sur l'année repère 1971 = 100.

Indice des prix concernant les raffineries de pétrole

Les indices de prix concernant les raffineries de pétrole et faisant partie des indices des prix de vente dans l'industrie (tableau 1) sont fondés sur un nouvel échantillon des prix, à partir de février 1977; dès lors, le nombre de prix observés et recueillis a été multiplié par neuf. Le prix des produits du pétrole est la moyenne des prix nets réels que les sociétés pétrolières exigent pour des catégories bien précises de produits vendus.

Les pondérations attribuées à toutes les catégories d'utilisateurs dans la nouvelle série correspondent aux ventes nettes effectuées en 1971 par la société en question dans une région donnée. Chaque pondération représente l'importance de la

gory in the Petroleum Refinery Index PRI) commodity listing, and determines the degree of influence which each price change has on the total index.

The index movement derived from the new sample was linked into the historical series at January 1977 and the procedure is described algebraically below:

$$P_{t/71}^{\text{Pub.}} = P_{t/\text{Jan. } 77}^{\text{New}} \times P_{\text{Jan. } 77/71}^{\text{Old}}$$

where

$P_{t/71}^{\text{Pub}}$ is the published index for a period subsequent to January 1977 which has been derived from multiplying the January 1977 level of the old index by the price movement derived from the new price sample;

$P_{t/\text{Jan. } 77}^{\text{New}}$ is the expression for the most recent index derived from the weights and price indexes of the new sample with a reference of January 1977;

$P_{\text{Jan. } 77/71}^{\text{Old}}$ is the expression for the last published index of January 1977 wherein the old weights and price sample were utilized.

catégorie respective d'utilisateur figurant dans la liste des produits pétroliers pris en compte par les indices de prix et détermine l'influence que chaque changement de prix exerce sur l'indice global.

Les variations de l'indice calculées à partir du nouvel échantillon ont été raccordées à la série historique en janvier 1977; le procédé s'exprime ainsi de manière algébrique:

$$P_{t/71}^{\text{publ.}} = P_{t/\text{janv. } 77}^{\text{nouv.}} \times P_{\text{janv. } 77/71}^{\text{anc.}}$$

où

$P_{t/71}^{\text{publ.}}$ est l'indice publié pour une période ultérieure à janvier 1977, calculé en multipliant le chiffre de l'ancien indice en janvier 1977 par la variation de prix mesurée à partir du nouvel échantillon;

$P_{t/\text{janv. } 77}^{\text{nouv.}}$ est l'indice le plus récent calculé avec les pondérations et les indices de prix du nouvel échantillon en prenant janvier 1977 comme période de référence;

$P_{\text{janv. } 77/71}^{\text{anc.}}$ est le dernier indice publié de janvier 1977 faisant appel aux anciennes pondérations et à l'ancien échantillon de prix.

Purchase Price Indexes of Industrial Materials

Secondary Metals (1971 = 100)

Ferrous and non-ferrous indexes are compiled from a series of input prices, inclusive of transportation and brokerage fees, submitted by a wide variety of purchasers from selected industries. Indexes for certain categories of metals cannot be published because of the confidentiality of the data under the Statistics Act.

Steel Foundry Input Index (1971 = 100)

Input price indexes for Steel Foundries (SIC 2910) are calculated using prices covering approximately 80% of total material inputs to the industry. The index for foundry inputs is determined using purchase prices gathered from establishments currently classified to the Iron and Steel Mills industry. These prices are inclusive of all costs incurred by the purchaser to bring the goods to his factory gate (freight, taxes). The weights in this index are derived from 1974 purchases as supplied by the Steel Castings Institute of Canada.

The Steel Foundry Input Index is calculated using the same formula as is described in the description of the Thermal Coal Index. Indexes are available from 1974 onwards, weights are available on request.

Indices du prix d'achat des matériaux industriels

Métaux secondaires (1971-100)

L'indice des métaux ferreux et non ferreux est établi à partir d'une série de prix comprenant les frais de transport et de dédouanement; ces données sont fournies par un large éventail de clients de certaines industries. Confidentiels en vertu de la Loi sur la Statistique, les indices de certaines catégories de métaux ne peuvent être publiés.

Indices des prix des entrées dans les fonderies d'acier (1971 = 100)

L'indice des prix des entrées dans les fonderies d'acier (CAÉ 2910) est calculé à l'aide des prix d'environ 80% des entrées de matières dans cette industrie. Cet indice est établi à partir des prix d'achat déclarés par les établissements classés à l'industrie des fonderies d'acier. Ces prix comprennent toutes les dépenses engagées par l'acheteur pour faire parvenir les produits à la porte de son usine (frais de transport, taxes, etc). Les coefficients de pondération de cet indice sont calculés à partir des achats pour 1974 fournis par le **Steel Castings Institute of Canada**.

L'indice des prix des entrées dans les fonderies d'acier est établi à l'aide de la même équation que l'indice du prix d'achat du charbon thermique. L'indice remonte jusqu'en 1974; les coefficients de pondération sont disponibles sur demande.

Thermal Coal Purchase Price Index (1971 = 100)

This index on a 1971 = 100 base is the result of a renewed demand for coal because of an anticipated shortage in energy supplies. The index for coal is a purchase price index determined by surveying electric utilities, the major users of bituminous coal. It includes purchase prices for both domestic and imported United States coal. Prices are the amount the utilities pay to suppliers, including federal and provincial taxes and freight rates. The weights in this index are derived from the base year purchase prices provided by the firms.

The "Thermal Coal Purchase Price Index" is calculated using the modified Laspyres' fixed weight formula:

$$P_{t/o} = \frac{\sum \frac{P_t}{P_o} V_o}{\sum V_o} \times 100$$

where

$P_{t/o}$ is the price index (expressed as a percentage) which compares prices of the given year t with those of the base year o (1971),

Σ is the sign indicating the summation over all items contained in the index,

P_t is the price of a particular item in the given period t ,

P_o is the price of a particular item in the base year o ,

V_o is the weight of each particular item in the base year o . Two sets of weights are used. The first set comprises 1971 quantities from 1971 to 1980 inclusive. The second set comprises 1980 quantities starting in January 1981. A link factor has been calculated in December 1980.

$\frac{P_t}{P_o}$ is the price ratio for a particular item (expressed as a percentage) between the given period t and the base year o .

Indexes for establishment and provincial levels cannot be published because of the confidentiality of the data under the Statistics Act.

Indice du prix d'achat du charbon thermique (1971 = 100)

Cet indice de base 1971 = 100 a été établi à la suite d'une nouvelle demande de charbon à cause d'une pénurie prévue en ressources énergétiques. L'indice du charbon est un indice du prix d'achat payé par les services publics d'électricité, principaux utilisateurs de charbon bitumineux. Il comprend à la fois le prix d'achat du charbon domestique et du charbon importé des États-Unis. Les prix sont ceux payés aux fournisseurs, avec les taxes fédérales et provinciales et les taux de fret. Les coefficients de pondération sont calculés à partir du prix d'achat de l'année de base fournis par les entreprises.

L'indice du prix d'achat du charbon thermique est établi à l'aide de l'équation modifiée de Laspyres à pondération fixe:

$$P_{t/o} = \frac{\sum \frac{P_t}{P_o} V_o}{\sum V_o} \times 100$$

où

$P_{t/o}$ est l'indice (exprimé en pourcentage) des prix d'une année t sur ceux de l'année de base o (1971),

Σ est le symbole qui indique la somme de tous les articles de l'indice,

P_t est le prix d'un article particulier pendant la période donnée t ,

P_o est le prix d'un article particulier pendant l'année de base o ,

V_o est le coefficient de pondération de chaque article particulier pendant l'année de base o . Deux ensembles de coefficients de pondération sont utilisés. Le premier ensemble comprend les quantités de 1971 pour les années de 1971 à 1980 inclusivement. Le second ensemble comprend les quantités de 1980 à partir de janvier 1981. Un facteur de liaison a été calculé en décembre 1980.

$\frac{P_t}{P_o}$ est le rapport (exprimé en pourcentage) du prix d'un article particulier entre la période donnée t et l'année de base o .

Les indices aux niveaux de l'établissement et de la province ne peuvent être publiés puisque la confidentialité des données doit être assurée en vertu de la Loi sur la statistique.

Electric Power Selling Price Indexes (Non-residential)

Brief Description

The Electric Power Selling Price Indexes are designed to measure "pure" price change at the producers' level, i.e., at the "factory gate". Since the industry's transmission lines are considered as part of the producer's operation, the "factory gate" in this index is at the user's end. These indexes are part of a larger system of indexes known as the Industry Selling Price Indexes and conform to the underlying concepts as described in reference document, Catalogue 62-543.

Industry Selling Price Indexes are a measure of pure price change of specified commodities having a fixed time and weight base of 1971-100. Prices are f.o.b. factory gate less discounts and before taxes. The 1971 Gross Shipment Values are gathered by the Census of Manufacturers. In the case of Electric Power Selling Price Indexes, weights are based on the 1971 revenue from electricity sales gathered by Prices Division.

The Electric Power Selling Price Index series is published in two broad customer categories of sales, (1) and index for bills less than 5 000kW and (2) an index for large industrial sales, bills or contracts 5 000 kW and over. Data are presented from 1971 onward, on a monthly basis. Only firm (non-interruptible) power is being surveyed. Interruptible and off-peak power price movement is not included in this index. The survey methodology is described under each of the two broad customer categories.

Whenever specification changes occur thereby altering the quality of the item being priced, quality change evaluations are made to ascertain only pure price change since the commodity characteristics must remain constant in order to measure pure price change over a given period of time, using Laspeyres formula as follows:

$$P_{t/o} = \frac{\sum \frac{P_t}{P_o} V_o}{\sum V_o} \times 100$$

$P_{t/o}$ = index for year t

P_t = price of an item in the given period

P_o = price of an item in year o, the base year

V_o = weight of an item in the base period

P_t/P_o = price ratio for a particular item.

Indices des prix de vente de l'énergie électrique (non résidentielle)

Brève description

Les indices des prix de vente de l'énergie électrique visent à mesurer la variation de prix "pure" au niveau de la production, c'est-à-dire, au "départ de l'usine". Étant donné que les lignes de transport de l'entreprise font ici partie de l'exploitation du producteur, le présent indice prend comme point de "départ de l'usine" l'entrée chez l'utilisateur. Ces indices appartiennent à un plus grand système d'indices appelé Indices de prix de vente dans l'industrie et s'appuient sur les concepts décrits dans le document de référence (n° 62-543 au catalogue).

Les indices de prix de vente dans l'industrie mesurent la variation de prix pure de certains produits ayant une base fixe de période et de pondération (1971-100). Il s'agit des prix f.o.b. départ usine moins les remises et avant impôt. Les valeurs des livraisons brutes sont recueillies par le recensement des manufactures. Dans le cas de l'indice des prix de vente de l'énergie électrique, les pondérations sont basées sur les recettes au titre des ventes de 1971, dont les données ont été recueillies par la Division des prix.

L'indice des prix de vente de l'énergie électrique paraît pour deux grandes catégories de ventes selon le client, à savoir: (1) un indice pour les factures de moins de 5 000 kW et (2) un indice pour les ventes, factures ou contrats industriels de 5 000 kW et plus. Nous publions ces données chaque mois depuis 1971. Seule l'énergie, garantie, non susceptible d'être interrompue fait l'objet du relevé les mouvements de prix de l'énergie susceptible d'être interrompue et de l'énergie des heures creuses n'étant pas compris dans l'indice. Les méthodes d'enquête figurent sous chacune des deux grandes catégories.

Toutes les fois qu'il se produit une variation de la qualité de produit relevé, on procède à une évaluation de la variation de la qualité afin de s'assurer que seule la variation de prix pure est prise en compte, puisque les caractéristiques du produit doivent demeurer constantes si l'on veut mesurer une variation de prix pure sur une période donnée. On se sert de Laspeyres de la façon suivante:

$$P_{t/o} = \frac{\sum \frac{P_t}{P_o} V_o}{\sum V_o} \times 100$$

$P_{t/o}$ = indice pour l'année t

P_t = prix d'un article particulier pendant une période donnée

P_o = prix d'un article particulier pendant l'année o, année de base

V_o = coefficient de pondération d'un article pendant la période de base

P_t/P_o = ratio des prix pour un article particulier.

Methodology

Bills less than 5,000 kW. In this category a "representative bill" was selected subjectively through examination of the bills in each of the municipalities drawn in our provincial samples. Some 120 municipalities were surveyed in the sample and the municipalities selected represent a good coverage of each province in terms of sales. The representative bill was established and its kW demand and kW.h consumption specifications will be held constant until it is found, on periodic review, that the bill is no longer representative of the monthly bills in that municipality. When this occurs a new representative bill will be selected and its price "spliced in" to the original bill to maintain the continuity of the index. Larger municipalities may have more than one representative bill where several significant groupings of bills have been identified. All provinces are included in the survey.

Bills 5,000 kW and over. This customer category presented problems in sampling. The category is composed of customers whose contract prices do not necessarily move as a family of curves. In many cases larger contracts are given a different price adjustment by utilities, than the lesser ones. In order to eliminate this sampling problem, a stratified sampling technique was used whereby homogeneous groups or strata were established and a representative contract was selected subjectively for each interval or stratum, e.g., 5,000-8,000 kW, 8,001-10,000 kW, 10,001-15,000 kW, 15,001-20,000 kW and over 20,000 kW (the specifications used may be theoretical in order to respect the confidentiality of a respondent). Interval boundaries and their representative contracts are held constant through time for each utility. These interval boundaries differ between utilities since each one has a different customer category make-up. The actual index of the "5,000 kW and over" category is a weighted average of the price movements for each interval or stratum within that group. Each interval is weighted according to the utility's revenue from sales for 1971. It is recognized that in the larger utilities the establishment of homogeneous groups of contracts in terms of price movement, especially in the contracts 15,000 kW and over, may not be possible. Consequently, as an alternative, utilities may calculate a weighted average unit price in each of the intervals of strata that are not homogeneous and apply this price movement to a theoretical representative contract. In this way distortions will be minimized and at the total index levels will be averaged out.

Individual indexes are calculated for the province, economic region and at the national level for each of the two broad customer categories described above. The five economic regions are as follows: Pacific (British Columbia), Prairie (Alberta, Saskatchewan and Manitoba), Ontario, Québec and Atlantic (Newfoundland, New Brunswick, Prince Edward Island and Nova Scotia).

Users are cautioned that the indexes indicate only price movement variations and should not be interpreted as representative of individual utilities relative price levels.

Méthodologie

Factures de moins de 5,000 kW. Dans cette catégorie une "facture représentative" a été choisie subjectivement parmi les factures de chacune des municipalités tirées de nos échantillons provinciaux. Les quelque 120 municipalités de l'échantillon sont représentatives des ventes effectuées dans chaque province. À la facture choisie sont attribuées des caractéristiques, c'est-à-dire la demande en kW et la consommation en kW.h, que l'on conserve jusqu'à ce que, après un examen périodique, on estime que la facture ne représente plus le prix mensuel des factures de cette municipalité. Dans ce cas, une nouvelle facture représentative est choisie et son prix est "ajusté" d'après la facture originale pour ne pas créer une discontinuité dans la série. Les grandes municipalités peuvent avoir plus d'une facture représentative lorsque plusieurs groupements de factures ont été établis. Toutes les provinces sont visées par l'enquête.

Factures de 5,000 kW et plus. Cette catégorie de clients présente certains problèmes d'échantillonnage; elle se compose dans son ensemble de clients pour lesquels les mouvements des prix des contrats ne vont pas nécessairement dans le même sens. Dans de nombreux cas, les gros contrats font l'objet d'un rajustement de prix par service, différent de celui des petits contrats. Afin d'éliminer ce problème, on a utilisé une technique d'échantillonnage stratifié pour établir des groupes ou strates homogènes et choisir subjectivement un contrat représentatif (dont les caractéristiques peuvent être "théoriques" de façon à garder secrets les chiffres d'un enquête) pour chaque intervalle ou strate, par ex., 5,000-8,000 kW, 8,001-10,000 kW, 10,001-15,000 kW, 15,001-20,000 kW et plus de 20,000 kW. Ces limites et leurs contrats représentatifs sont tenus constants dans le temps pour chaque service public. Ces limites ne sont pas les mêmes pour chaque service puisque chacun regroupe des clients différents. L'indice réel pour les factures de 5,000 kW et plus est une moyenne pondérée des mouvements de prix pour chaque intervalle ou strate de chaque groupe, chaque intervalle étant pondéré selon les recettes de ce service au titre des ventes de 1971. On sait pertinemment que pour les grands services, l'établissement de groupes de contrats homogènes en termes de mouvement de prix, surtout les contrats de 15,000 kW et plus, peut être impossible; par conséquent, comme solution de rechange, les services peuvent calculer un prix unitaire moyen pondéré pour chaque intervalle ou strate non homogène et appliquer cette variation de prix à un contrat représentatif théorique. De la sorte, les distorsions seront maintenues à un minimum et s'équilibreront aux niveaux de l'indice total.

Chaque indice est calculé selon la province, la région économique et le Canada pour chacune des deux grandes catégories de clients décrites ci-haut. Les cinq régions économiques sont: le Pacifique (Colombie-Britannique), les Prairies (Alberta, Saskatchewan et Manitoba), l'Ontario, le Québec, l'Atlantique (Terre-Neuve, Nouveau-Brunswick, Île-du-Prince-Édouard et Nouvelle-Écosse).

Les utilisateurs sont priés de noter que les indices rendent compte des variations des mouvements des prix seulement et qu'il ne faut pas les considérer comme représentatif des niveaux relatifs des prix des divers services.

Raw Materials Price Index (1977 = 100)

The Raw Materials Price Index measures the price change in the purchase of raw materials by Canadian Industry. By the term raw materials is meant those commodities that are the products of the primary stage of production - for example wheat, but not flour, iron ore but not pig iron, and coal but not electricity. Approximately seventy commodities are priced in the index, grouped into eight major components.

The index and the major group indexes, on a 1977 time base, are published monthly in the Daily Bulletin approximately five weeks after the end of the reference month. They are also available at that time on CANSIM in matrix 2892.

The index covers purchases by Canadian industry, generally for further processing, and does not cover exports or flows of raw materials directly to final demand (principally foodstuffs). For example, potatoes bought by food processing manufacturers (for the manufacture of potato chips, or frozen french fries) are included in the index, but those bought by consumers directly are not.

As a purchasers price index, prices should include all charges a purchaser incurs to bring the commodity to his establishment gate. Thus transportation charges, taxes and custom duties are all included. So also are the effects of subsidies, if any are paid to the purchaser. Imports as well as domestically produced goods are included. For example, the pricing of crude oil includes pipe line charges, and levies such as the Petroleum Compensation Charge, but the purchase price of imported oil also reflects the import subsidy paid to purchasers.

In this index it is not always practicable to collect the price changes on all the charges the purchaser incurs. Prices are ideally collected from the purchaser. However, in several cases where there is a conventional pricing point already well known for a commodity that price is used; for example, marketing board prices for eggs and milk, and stockyard prices for some livestock. In a few cases, where data for unprocessed materials are not available, prices are taken for a similar commodity at the next stage of processing (e.g. some non-ferrous metals). A detailed description of the characteristics of prices for any commodity is available from Prices Division on request. Prices sought for each month are those in effect on the 15th of the month or the nearest prior business day. In a few cases, prices used are averages for the week which includes the 15th. Prices are reported directly to Statistics Canada or are taken from trade publications or from publications of other government departments.

Weights were derived from the 1976 Input/Output tables which provide values at purchasers prices of commodities purchased as intermediate inputs. These values have been adjusted for price changes between 1976 and 1977.

Indice des prix des matières brutes (1977 = 100)

L'indice des prix des matières brutes mesure la variation des prix des matières brutes qu'achètent les industries canadiennes. Par matières brutes, on entend les marchandises qui sont le fruit de l'étape primaire de la production. Cela englobe, par exemple, le blé (mais non la farine), le minerai de fer (mais non la fonte en gueuses) et le charbon (mais non l'électricité). Les prix d'environ soixante-dix produits, regroupés en huit grandes composantes, sont relevés aux fins de l'indice.

L'indice d'ensemble et ceux des composantes, dont l'année de base est 1977, paraissent tous les mois dans le Quotidien de Statistique Canada, à peu près cinq semaines après la fin du mois de référence. Ils sont offerts simultanément dans la matrice 2892 de CANSIM.

L'indice vise les achats des industries canadiennes, habituellement en vue d'une transformation additionnelle, mais il ne porte pas sur les exportations, ni sur les matières brutes qui passent directement à la demande finale (principalement des denrées alimentaires). Par exemple, les pommes de terre achetées par les entreprises de conditionnement des aliments pour la fabrication de croustilles ou de frites congelées sont prises en compte dans l'indice, mais celles achetées directement par le consommateur ne le sont pas.

Comme il s'agit d'un indice des prix à l'achat, les prix devraient comprendre toutes les dépenses engagées par l'acheteur pour faire parvenir le produit à la porte de son établissement. Ils englobent donc les frais de transport, les taxes et les droits de douane, de même que les effets de toute subvention versée à l'acheteur. On tient compte des importations et des biens produits au pays. À titre d'exemple, les prix du pétrole brut comprennent les frais de pipe-line et les impôts comme la taxe d'indemnisation pétrolière, mais le prix d'achat du pétrole importé traduit également la subvention à l'importation versée aux acheteurs.

Il n'est pas toujours possible de relever les variations de toutes les dépenses engagées par l'acheteur, auprès duquel les prix sont idéalement recueillis. Il peut néanmoins exister des points de relevé bien connus pour un produit donné (offices de commercialisation des oeufs et du lait, parcs à bestiaux, etc.); on préférera dans ces cas recourir aux prix donnés par ces intermédiaires. Lorsqu'il est impossible d'obtenir les renseignements pour une matière non transformée, les prix sont prélevés pour un produit semblable à l'étape suivante de la transformation (c'est le cas notamment de certains métaux non ferreux). La Division des prix fera parvenir sur demande une description détaillée des caractéristiques des prix d'un produit donnée. Les prix recueillis chaque mois sont ceux pratiqués le 15 du mois ou le dernier jour ouvrable qui le précède. Dans certains cas, les prix utilisés représentent la moyenne de la semaine qui englobe le 15. Les prix qui ne sont pas déclarés directement à Statistique Canada sont tirés de revues spécialisées ou des publications d'autres ministères.

Les pondérations sont fondées sur les tableaux des entrées-sorties de 1976, qui donnent les valeurs (prix d'achat) des produits acquis à titre d'entrées intermédiaires. Les valeurs en cause ont été modifiées en fonction de la variation des prix entre 1976 et 1977.

The index is calculated according to the following formula:

$$I_s = \frac{1}{n} \sum P_t / P_{77} \times 100$$

$$I = \frac{\sum I_s \left(\frac{P_{77}}{P_{76}} \cdot v_{76} \right)}{\left(\frac{P_{77}}{P_{76}} \cdot v_{76} \right)}$$

where

I_s = commodity index

P_t = current level of price quote

P_{77} = average level of price quote in 1977

n = number of price quotes for the commodity

I = major group or total index

P_{77}/P_{76} = price movement from 1976 to 1977 of commodity

V_{76} = expenditure in 1976 on commodity.

Individual price quotations are equally weighted within the commodity indexes except in a few instances where data are available to allow prices to be weighted according to their market shares.

L'indice est calculé selon la formule suivante:

$$I_s = \frac{1}{n} \sum P_t / P_{77} \times 100$$

$$I = \frac{\sum I_s \left(\frac{P_{77}}{P_{76}} \cdot v_{76} \right)}{\left(\frac{P_{77}}{P_{76}} \cdot v_{76} \right)}$$

où

I_s = l'indice du produit

P_t = le prix actuel du produit, d'après le relevé

P_{77} = le prix moyen du produit en 1977

n = le nombre de relevés effectués pour le produit

I = le groupe ou l'indice d'ensemble

P_{77}/P_{76} = la variation des prix du produit de 1976 à 1977

V_{76} = les dépenses consacrées au produit en 1976.

En ce qui concerne les indices des produits, les observations individuelles des prix ont toutes la même pondération, sauf lorsque des données connexes permettent de pondérer les prix en fonction des parts du marché.

Index weights for the major groups and their commodity content are presented in the following table:

Le tableau qui suit renferme les pondérations relatives aux groupes et aux produits qui les composent:

Total major groupes	Weights 100%	Commodities within each group
Ensemble des groupes	Pondé- ration 100%	Produits dans chaque groupe
Vegetable products - sub- stances végétales	12	Fresh fruit, wheat, other grains, oil seeds, natural rubber, raw sugar, cocoa, coffee, tea, fresh vegetables, tobacco, hay - Fruits frais, blé, autres céréales, oléagineux, caoutchouc brut, sucre brut, cacao, café, thé, légumes frais, tabac, foin
Animals, and animal prod- ucts - Animaux et sub- stances animales	23	Furs, hides and skins, cattle and calves, sheep And lambs, hogs, poultry, milk, eggs, fish - Fourrures, cuirs et peaux, veaux et bovins, moutons et agneaux, porcs, volaille, lait, oeufs, poisson
Textile - Matière tex- tiles	1	Cotton, wool, man-made fibre - Coton, laine, fibres synthétiques
Wood - Bois	11	Logs, pulpwood - billes, bois à pâte
Ferrous materials - Matières ierreuses	3	Scrap, iron ore - Ferraille, minerai de fer
Non-ferrous metals - Métaux non ferreux	6	Aluminum, copper, lead, nickel, gold, other precious metals, tin, zinc, scrap - Aluminium, cuivre, plomb, nickel, or, autres métaux précieux, étain, zinc, déchets
Non-metallic minerals - Minéraux non métalliques	4	Sulphur, sand and gravel, asbestos, stone, gypsum, potash - Soufre, sable et gravier, amiante, pierre, gypse, potasse
Coal, crude oil, natural gas - Charbon, pétrole brut, gaz naturel	40	Thermal coal, crude oil, natural gas - Charbon thermique, pétrole brut, gaz naturel

Users who wish to comment on the indexes presented here are invited to contact the Goods and Service Producing Industries Prices Section, Prices Division, telephone (613) 995-5761.

Les utilisateurs qui auraient des observations à faire au sujet de ces indices sont priés d'en faire part à la Section des prix des industries de biens et de services, Division des prix, téléphone (613) 995-5761.

JUL 16 1986
